Hex Nut Shank with Safety Magnet

A strong magnet on two of the hex surfaces holds the reamer in the tool. The magnets can also keep the reamer from accidentally falling when not in the socket (see OSHA standard 1926.759 for falling object protection). Use with square-drive impact wrench sockets. Cutting diameter tolerance is +0.010″, –0.000″.

High-Speed Steel Reamers for Taper-Pipe Holes

Use these reamers prior to tapping with taper-pipe taps. All have a left-hand spiral and right-hand cut. They fit into straight-handle tap wrenches (see 2546A on page 2533).

For Pipe Size	Diameter Large End (A)	Diameter Small End (B)	Flute Lg.	O'all Lg.

Tube Reaming and Deburring Tools

Ream and debur the inside and outside edges of 3/16"-1 1/2" PVC and CPVC tubing and 3/16"-1 1/2" metal tubing with one tool. Tools have three cutters on each end and a die cast zinc body. They cut both clockwise and counterclockwise.

Tool with Tungsten Tool Steel Cutters—Use on PVC, CPVC, stainless steel (including Type 304 and Type 316), brass, hard and soft copper, and aluminum tubing.

2737A11 ..... $69.02

Tool with Hardened Steel Cutters—Use on PVC, CPVC, brass, soft copper, and aluminum tubing.

2709A12 ..... $18.61

High-Speed Steel Deburring Reamers for Sheet Metal

Also known as repairmen's reamers.

Spiral-flute reamers not only countersink, enlarge, and smooth the edges of holes in sheet metal, they also remove burs from pipe and conduit.

Straight-flute reamers remove burs and enlarge holes in thin sheet metal.

Reamers with a ***round shank*** are for portable drills. Reamers with a ***T-handle shank*** are for hand use.

Threaded-Shank High-Speed Steel Reamers

Ream hard, high-strength alloys and tough, heat-resistant materials. All have a 1/4"-28 threaded shank and straight flutes. The pilot is 1/4" long and has a 45° cutting chamfer. Overall length includes the pilot and threaded shank. Reamer cutting diameter tolerance is +0.0002", –0.0000". Pilot cutting diameter tolerance is +0.000", –0.001".

Drill Guides for Countersunk Holes

Save time when drilling holes for hinges, latches, and other hardware that requires screws. Each guide has a beveled tip that fits into countersunk hardware, ensuring centered pilot holes.

Round-shank guides are also known as Vix Bits. ***Hex-shank*** guides fit all quick-change and standard drill chucks.

Guides are spring loaded. Drilling pressure compresses the guide body and extends the drill bit into the material. All are made of steel. ***Drill bits*** (sold separately) are high-speed steel.

CAT-V40 Flange End Mill Holders

Holders securely grip end mills in machines with a 40 taper spindle. All are made of case-hardened alloy steel and have 5/8″-11 threads on the tapered end to hold retention knobs that fit your machine. End mill holding set screws are included.

For End Mill Shank Dia. (A)	Projection (B)	Dia. (C)

Machine Tool Wipers

Attach wipers to your milling machine and as the table moves, wipers sweep away chips and other contaminants, preventing them from wearing down sliding parts.

Housing is made of 0.18″ thick Type 304 stainless steel and has a 0.33″ thick extended lip to protect the wiper blade from hot chips. Wiper blades are made of polyurethane, so they withstand exposure to most oils, coolants, and contaminants. Wipers can be cut to length. To mount, counterbore holes and attach with 1/4″-20 socket head cap screws (not included).

R8 Right-Angle Milling Machine Attachments

Simplify right-angle work by reducing the need for special tooling. Ideal for cavities and pocket-milling jobs, this attachment requires a drawbar (sold separately) to operate.

Attachments

Has hardened and ground spiral bevel gears (1.33:1 ratio), sealed bearings, R8 collet spindle, and a grease fitting. Body is ductile iron and has alignment flats on the sides.

29155A11 ..... $1,041.81

Drawbars

Required for the attachment above. They are made of heat-treated alloy steel and have 1 1/2″ long 7/16″-20 threads.

End Mill Holder

Morse Taper Adapter

Designed to hold end mills, drills, and reamers securely in Bridgeport and similar milling machines with an R8 taper spindle. All are made of heat-treated alloy steel and are ground to accurate size. Their R8 shanks have a 7/16″-20 internal drawbar thread.

R8 Shank End Mill Holders

All include set screws.

Holders for ***1/8″***, ***5/16″***, and ***1/2″ to 1 1/2″*** diameter end mills accept single-end end mills only. Holders for ***3/16″***, ***1/4″***, and ***3/8″*** diameter end mills accept single- and double-end end mills.

Morse Taper to R8 Shank Milling Machine Adapters

Convert tools with a Morse taper shank to an R8 shank.

Adapter Hole Size	Adapter Shank		
#1 Morse Taper	R8	8784A13	$97.38
#2 Morse Taper	R8	8784A14	97.38
#3 Morse Taper	R8	8784A15	107.21

End Mill Storage Cabinets

Three drawers and 29 compartments make it easy to organize and store your 1/8″ to 1″ end mills. Size is marked on each drawer for easy identification. Cabinets are steel with a gray epoxy finish. Overall size is 14 5/8″ Lg. × 7 3/8″ Wd. × 7 3/4″ Ht.

Cabinet holds one each of sizes 9/16″, 11/16″, and 7/8″; two each of sizes 3/16″, 5/16″, 7/16″, 5/8″, and 1″; three each of sizes 1/8″, 1/4″, 3/8″, and 3/4″; and four of size 1/2″.

28345A17 ..... $82.14

Milling Machine Power Feeds

Convert your milling machine from manual feed to motorized power. Designed for general purpose machining on Class 1 mills up to 3 hp, you'll get smooth power and rapid traverse. Speed is variable so you can make adjustments for material, cutter, and coolant. Install on the X (left/right) or the Y (in/out) motion axis. Feeds fit below the table surface for unobstructed workpiece mounting, and a limit switch prevents damage caused by over-travel. Single-lever control engages and disengages as well as starts and stops feeds. Feeds also have a central control knob for speed adjustment, on/off switch, pilot light, protective breaker, travel stop/limit switch assemblies, and 110 VAC, 50/60 Hz motor.

Standard Torque— Peak torque is 140 in.-lbs., intermittent torque is 105 in.-lbs., and continuous torque is 90 in.-lbs.

High Torque— For applications where it's necessary to maintain stable feed control for a smooth surface finish at speeds as low as 1/2″/min. at full torque. Peak torque is 150 in.-lbs., intermittent torque is 120 in.-lbs., and continuous torque is 100 in.-lbs.

To Order: Select the power feed of your choice and a mounting kit (sold separately below) designed to fit your milling machine.

Also Available: Other mounting kits that fit milling machines not listed below. Please ask for 30815A999 and specify the make and model number of your milling machine.

Power Feeds

Torque	Amps	Feed Rate	Rapid Traverse		
Standard	2.5	3/4″-25″/min.	35″/min.	30815A27	$560.84
High	3.0	1/2″-35″/min.	35″/min.	30815A34	650.35

Mounting Kits

X-axis table feed for manually operated Bridgeport, Brute 9″ × 42″, 9″ × 49″, Jet 1048, South Bend Import	30815A41	$80.00
X-axis table feed for Bridgeport (to replace existing Bridgeport gearbox power table feed)	30815A42	228.57
Y-axis table feed for manually operated Bridgeport 12″ Cross Travel	30815A61	145.71

Drawbars for Milling Machines

2J

Universal Adjustable Length

All have 1½″ long 7/16″-20 threads and a black-oxide finish. Made of alloy steel, except the universal adjustable-length drawbar, which is low-carbon steel. ***Universal adjustable-length*** drawbar has spacers so you can adjust the shaft length in ¼″ increments. It also has a hex so it will fit a variety of milling machines.

	Bar Lg.	Hex Lg.

Machine Tool Depth Stops

Attach a depth stop to your milling machine to accurately set machining depth. Also known as quill stops, they fit all ½″-20 threaded rods.

Clamp-on stop is spring-loaded. Squeeze knobs toward each other to set depth. Made of aluminum.

Push-button stop installs on the quill and lets you adjust the depth in two ways. Push the button and slide the stop to the desired position, or turn the nut and make adjustments in 0.001″ increments. Made of carbon steel. Can also be used on drill presses.

Clamp On	2949A71	$20.85

Concave- and Convex-Radius End Mills for Curved Edges

Machine curved edges into your workpiece. End mills have six flutes and a radius tolerance of ±0.001″. All are made of high-speed steel.

Concave-radius end mills produce a rounded outward-curving shape.

Convex-radius end mills produce a hollow inward-curving shape.

★ Four flutes. ◆Overall length is 4″.

Corner-Rounding End Mills

Round off sharp corners on the edge of your workpiece. End mills have four flutes and a radius tolerance of ±0.001″. ***Cobalt steel*** provides better heat and abrasion resistance than high-speed steel. Use on tough materials such as cast iron, cast steel, and heat-treated steel.

High-Speed Steel Two-Flute End Mill Sets

Sets pack mill diameters 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, and 1/2″ into a wood block stand. End mills have a 3/8″ shank diameter, except the 1/2″ mill dia. size, which has a 1/2″ shank. Overall lengths range from 2 5/16″ to 3 3/4″. All are square end and center cutting. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″ for single-end tools; +0.0000″, –0.0015″ for double-end tools.

Square-end end mills allow plunge cuts. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at much higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Maximum working temperature is 750° F. Color is blue-gray.

	Uncoated		Long-Life TiN Coated		Extra-Life TiCN Coated	
Single Square End	88505A24	$70.38	88505A31	$75.36	88505A34	$79.58
Single Ball End	88505A26	95.17	88505A33	101.94	88505A36	107.59
Double Square End	88505A27	94.47	88505A32	101.18	88505A35	106.76

High-Speed Steel Two-Flute End Mills

An economical alternative to cobalt and carbide tools, two flutes maximize chip clearance for slotting applications. All are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

♦ Shank diameter is 3/4"; length of cut is 1 1/2"; overall length is 3 3/4".

Tight-Tolerance High-Speed Steel Two-Flute End Mills

Made to a closer tolerance than standard two-flute end mills for cutting keyways. Use for materials such as alloy steel, carbon steel, and cast iron. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.0000", –0.0015".

Metric High-Speed Steel Two-Flute End Mills

Two flutes provide maximum chip clearance for slotting applications. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001", –0.000".

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Long-life TiN (titanium nitride) coated end mills last longer and can be run at much higher feeds/speeds. Use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold.

High-Speed Steel Three-Flute End Mills

Three flutes make smoother cuts and produce a finer finish than two flutes, though they do not provide the same chip clearance. Use on alloy steel, carbon steel, and cast iron. All are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″.

High-Speed Steel Four-Flute End Mill Sets

You'll get six end mills in diameters 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, and 1/2″ in a wood block stand. All have a 3/8″ shank dia., except the 1/2″ mill dia. size, which has a 1/2″ shank. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. ***Single end*** overall lengths range from 2 5/16″ to 3 1/4″. Mill diameter tolerance is +0.001″, –0.000″. ***Double end*** overall lengths range from 3 1/16″ to 4 1/8″. Mill diameter tolerance is +0.0000″, –0.0015″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Maximum working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Maximum working temperature is 750° F. Color is blue-gray.

	Uncoated		Long-Life TiN Coated		Extra-Life TiCN Coated	
Single-End Set	88505A25	$91.22	88505A41	$96.01	88505A43	$97.69
Double-End Set	88505A28	120.66	88505A42	127.02	88505A44	136.42

High-Speed Steel Four-Flute End Mills

Center Cutting

Try four flutes for a fine finish and feeds twice as fast as two-flute end mills. All are square end and have a 30° helix angle. Mill diameter tolerance is +0.001″, –0.000″.

Noncenter cutting end mills are designed for operations where the peripheral teeth do most of the work. ***Center cutting*** end mills allow plunge cuts into a surface.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

Metric High-Speed Steel Four-Flute End Mills

The metric version of our inch size four-flute end mills, they produce a fine finish and can be fed up to twice as fast as two-flute end mills. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.001", –0.000".

High-Speed Steel Six- and Eight-Flute End Mills

More flutes means these end mills produce a finer finish. They can also be fed at faster rates and resist wear better than tools with fewer flutes. Use for machining alloy steel, carbon steel, and cast iron. All are square end, noncenter cutting, and have a 30° helix angle. Mill diameter tolerance is +0.001", –0.000".

Double-End High-Speed Steel Two-Flute End Mills

Double the life of your tool—when one end wears out, switch to the opposite end. They are an economical alternative to cobalt and carbide tools. Two flutes maximize chip clearance for slotting applications. All are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

Metric Double-End High-Speed Steel Two-Flute End Mills

The metric version of our inch size end mills, all are square end and center cutting for plunge cuts. Use on alloy steel, carbon steel, and cast iron. Helix angle is 30°. Mill dia. tolerance is +0.003″, –0.000″.

Double-End High-Speed Steel Three-Flute End Mills

Two cutting ends double the life of these tools and three flutes produce smoother cuts and a finer finish than two-flute tools. Use on alloy steel, carbon steel, cast iron, and nonferrous metals. All are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″.

Double Ball-End High-Speed Steel Two-Flute End Mills

Machine rounded details into alloy steel, carbon steel, and cast iron workpieces. All have two cutting ends for extended life. They are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.0000″, –0.0015″.

For information about end mill cut styles, see page 2487.

Double-End High-Speed Steel Four-Flute End Mills

Switch to the opposite cutting end when one end wears out and double the life of your tool. Four flutes produce a fine finish. All are square end and have a 30° helix angle.

Noncenter-cutting end mills are for operations where the peripheral teeth do most of the work. Mill diameter tolerance is +0.001″, –0.000″. ***Center-cutting*** end mills allow you to make plunge cuts into a surface. Mill diameter tolerance is +0.0000″, –0.0015″.

Uncoated end mills are for general milling of alloy steel, carbon steel, and cast iron.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating is good for use on alloy steel, aluminum, and plastic. Max. working temperature is 1100° F. Color is gold.

Noncenter Cutting

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating, making it a good choice for tough-to-machine materials such as ductile cast iron, stainless steel, aluminum, and plastic. Max. working temperature is 750° F. Color is blue-gray.

Super-life TiAlN (titanium aluminum nitride) coating is the best for very high feeds/speeds and high-temperature applications. Use to mill cast iron, stainless steel, nickel-based alloys, and titanium. Not for use on aluminum. Max. working temperature is 1470° F. Color is purple-gray.

Cobalt Steel End Mills

For information about end mill cut styles, see page 2487.

Cobalt Steel Two-Flute End Mills

Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are square end and center cutting so you can make plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.000″.

Cobalt Steel Four-Flute End Mills

Center Cutting

Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel for a finer finish than two-flute end mills. Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. All are square end and have a 30° helix angle. Mill diameter tolerance of +0.001″, –0.000″.

Noncenter-cutting end mills are for operations where the peripheral teeth do most of the work.

Center-cutting end mills allow you to make plunge cuts into a surface.

Premium Cobalt Steel Four-Flute End Mills

Built to last, these particle metal tools resist chipping and can be run at higher feeds/speeds than standard cobalt steel end mills. Use on high-temperature alloys such as titanium, Inconel 718, Monel, and Hastelloy. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 35°. Mill diameter tolerance is +0.001″, –0.000″.

Extra-life TiCN (titanium carbonitride) coated end mills have better wear resistance than uncoated tools. Maximum working temperature is 750° F. Color is blue-gray.

Rounded-Edge Cobalt Steel Four-Flute End Mills

Rounded edges on the tips of the flutes reduce chipping and lengthen the life of the tool. Also known as corner radius end mills, they work well for making molds. Use on cast iron, cast steel, and heat-treated steel. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.0015″, –0.000″; corner radius tolerance is ±0.001″.

To Order: Please specify corner radius.

For information about end mill cut styles, see page 2487.

Double-End Cobalt Steel Two-Flute End Mills

Two cutting ends extend working life. Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0015″.

Double-End Cobalt Steel Four-Flute End Mills

Four flutes provide a fine finish and two cutting ends extend tool life. Cobalt steel provides higher heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All are center cutting with a 30° helix angle.

Square-end end mills allow plunge cuts. Mill diameter tolerance is +0.0000″, –0.0015″. ***Ball-end*** end mills machine rounded details into a workpiece. Mill diameter tolerance is ±0.0005″.

Reduced-Shank End Mills

Also known as Bridgeport end mills, these tools have a reduced shank for use in milling machines and a shorter cutting length for extra rigidity. The more flutes, the finer the finish. Made of cobalt steel, unless noted. All are square end with a 30° helix angle.

Two-flute end mills are center cutting so you can make plunge cuts in a surface. Mill diameter tolerance is +0.0015″, –0.000″. ***Four-, six-,*** and ***eight-flute*** end mills are noncenter cutting for operations where peripheral teeth do most of the work. Mill diameter tolerance is +0.0015″, –0.0000″.

♦High-speed steel. ♥High-speed steel. Mill diameter tolerance is +0.002″, –0.000″.

Cobalt Steel Two-Flute Drill/Mills

A 90° point angle turns these end mills into drills for slotting, side milling, beveling, and profiling. Cobalt steel provides better heat and abrasion resistance than uncoated high-speed steel. Use on tough, abrasive materials such as cast iron, cast steel, and heat-treated steel. All have a 30° helix angle. Mill diameter tolerance is +0.0015″, –0.0000″. ***Long-life TiN (titanium nitride) coated*** end mills offer higher heat and abrasion resistance and longer tool life. Use on stainless steel, alloy steel, cast iron, and nickel alloys. Maximum working temperature is 950° F. Color is gold.

For information about end mill cut styles, see page 2487.

Miniature Double-End End Mills

Square End

Ball End

Thanks to small mill diameters, these tools are well suited for detail work. All have a 3/16″ shank diameter, which allows you to use one holder for all sizes. They are center cutting and have a 35° to 40° helix angle. ***Cobalt steel*** provides better heat and abrasion resistance than high-speed steel.

Square-end end mills allow plunge cuts into a surface. *Four-flute* end mills have a mill diameter tolerance of +0.002″, –0.000″. ***Ball-end*** end mills machine rounded details into a workpiece.

Tapered High-Speed Steel End Mills

10° Taper

Machine angled slots in dies and molds. Also known as taper degree end mills. All have three flutes and are center cutting. Mill diameter tolerance is ±0.002″.

For information about end mill cut styles, see page 2487.

High-Speed Steel Two-Flute End Mills for Aluminum

Square End

Ball End

A helix angle of 37° allows for greater chip removal than a 30° helix angle. All are center cutting and have a mill diameter tolerance of +0.001″, –0.000″. ***Square-end*** end mills allow plunge cuts in a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

High-Speed Steel Three-Flute End Mills for Aluminum

Three flutes provide a fine finish and a helix angle of 37° allows for greater chip removal than a 30° helix angle. All are square end and center cutting for plunge cuts into a surface. Mill diameter tolerance is +0.001″, –0.000″.

Extra-life TiCN (titanium carbonitride) coated end mills have better wear resistance than uncoated tools. Maximum working temperature is 750° F. Color is blue-gray.

Roughing High-Speed Steel End Mills

Six Flute

For some applications speed is more important than a smooth finish. Roughing end mills remove large amounts of material up to three times faster than conventional end mills. Their coarse pitch also removes large chips. Use for milling alloy steel, carbon steel, and cast iron. All are square end, noncenter cutting, and have a 30° helix angle, except three flute are center cutting and have a 35° helix angle. Mill diameter tolerance is ±0.005″.

For information about end mill cut styles, see page 2487.

Roughing Cobalt Steel End Mills

Four Flute Coarse Pitch

Not only do these end mills quickly remove chips, they resist heat and abrasion better than uncoated high-speed steel end mills. All are square end and noncenter cutting. Helix angle is 30°. Mill diameter tolerance is +0.003″, –0.000″ for 3/16″ to 1″ diameters and +0.006″, –0.000″ for 1 1/8″ to 2″ diameters.

Coarse-pitch end mills produce large chips. Use for milling low- to medium-carbon steel and alloy steel. ***Fine-pitch*** end mills last longer and produce smaller chips. Use on high-temperature alloys, stainless steel, and nickel-based alloys.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is light gray.

Roughing Cobalt Steel End Mills for Aluminum

Three wide flutes, a 36° helix angle, and a coarse pitch provide maximum chip removal when milling aluminum. End mills can also be used on other soft metals such as brass and bronze. All are square end and center cutting so you can make plunge cuts into a surface. Mill diameter tolerance is +0.005″, –0.000″.

Carbide Chamfer End Mills

Make bevelled and angled cuts without the need for hand deburring. All are made of premium sub-micrograin carbide. Two flutes provide better chip clearance, while four flutes produce a finer finish. Shank diameter is equal to mill diameter. Mill diameter tolerance is +0.000″, –0.003″.

Carbide End Mill Sets

Get diameters 1/8″, 3/16″, 1/4″, 5/16″, 3/8″, and 1/2″ in a wood case. All are center cutting with a helix angle of 30°. Mill diameter tolerance is +0.000″, –0.002″. ***Square-end*** end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

To Order: For coated end mills, please specify coating: long-life TiN, extra-life TiCN, or high-temperature AlTiN.

For information about end mill cut styles, see page 2487.

Ultra Duty Carbide End Mills

Use these tools for strong, fast, and long-lasting aggressive machining on hardened steel, stainless steel, titanium, Monel, and workpieces with interrupted cuts. Premium sub-micrograin carbide provides excellent wear and fracture resistance. Sharper cutting edges improve lubricity and provide a finer finish than our other carbide end mills. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.000″, –0.002″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 840°F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110°F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560°F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or TiAlN.

For information about end mill cut styles, see page 2487.

Carbide End Mills

Four Flute

Speed up your milling operation—these micrograin carbide tools can be run two to five times faster than high-speed steel end mills. They're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1110° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is light violet.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds and high-temperature applications. Maximum working temperature is 1450° F. Color is dark gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or AlTiN.

Long-Reach Rounded-Edge Carbide End Mills for Mold Steels

Use to mill hardened steel for die and mold work. A rounded-edge cutting surface with recessed teeth won't scratch your workpiece like other end mills. Plus, they have a long neck for deep cuts. Also known as torus end mills. All are made of micrograin carbide and have four flutes. They are coated with a multilayered blend of TiN (titanium nitride) and TiAlN (titanium aluminum nitride) for extended life and use in temperatures up to 1470° F. Color is red-violet. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.001″.

For information about end mill cut styles, see page 2487.

Metric Carbide End Mills

Micrograin carbide end mills can be run two to five times faster than high-speed steel. They're also harder for better resistance to abrasion and high cutting temperatures. Fewer flutes provide better chip clearance, while more flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°. Mill diameter tolerance is +0.000 mm, –0.051 mm.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 840° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110° F. Color is light violet.

Four Flute

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or TiAlN.

Double-End Carbide End Mills

Two ends are better than one when it comes to tool life. These micrograin carbide tools can be run two to five times faster than high-speed steel end mills. They're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Two flutes provide better chip clearance, while four flutes produce a finer finish. End mills with 3″ or greater overall length have a flat on the shank for better gripping power. All are center cutting and have a 30° helix angle. Mill diameter tolerance is +0.000″, –0.002″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1110° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is light violet.

Four Flute Ball End

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1470° F. Color is dark gray.

To Order: For coated end mills, please specify coating: TiN, TiCN, or AlTiN.

Also Available: Ball-end end mills with TiN coating. Please ask for 27375A7 and specify mill diameter, overall length, and two or four flutes.

For information about end mill cut styles, see page 2487.

Tight-Tolerance Carbide End Mills

Four Flute

Made for precision machining, tools have a +0.001″, –0.000″ mill diameter tolerance. The shank diameter is equal to or slightly smaller than the mill diameter, allowing you to make deep cuts. They are premium sub-micrograin carbide. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are square end and center cutting so you can make plunge cuts in a surface. Helix angle is 30°.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 840° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 1110° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify TiN, TiCN, or TiAlN.

Tapered Carbide End Mills

2° Taper

Also known as taper degree end mills, these premium sub-micrograin carbide tools machine angled slots in dies and molds. Three flutes provide efficient chip ejection and a smooth finish. All are center cutting, allowing plunge cuts in a surface. Mill diameter tolerance is ±0.002″.

●Four flutes.

Spherical Carbide End Mills

Four Flute

A 220° tip provides a greater curve than a ball-end tool with a 180° tip. Made of premium sub-micrograin carbide with a high-temperature AlTiN (aluminum titanium nitride) coating for very high feeds/speeds. Mill titanium, nickel-based alloys, cast iron, and stainless steel.

Two flutes provide better chip clearance, while four flutes produce a finer finish. All are center cutting to allow plunge cuts in a surface. Helix angle is 15°. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 1450° F. Color is black.

Corner-Rounding Carbide End Mills

Single End

Round off sharp corners. All are noncenter cutting and have straight flutes.

Single-end four-flute end mills are premium sub-micrograin carbide and have a radius tolerance of ±0.0005″. *Note:* Those with a mill dia. greater than 1/2″ have a carbide head brazed on a steel shank. ***Double-end three-flute*** end mills are micrograin carbide and have a radius tolerance of ±0.002″.

For information about end mill cut styles, see page 2487.

Ball-End Carbide End Mills

These end mills cut rounded grooves up to 2½ times faster than high-speed steel end mills. Made of micrograin carbide, they're also harder than high-speed steel for better resistance to abrasion and high cutting temperatures. Two flutes provide maximum chip clearance, while three and four flutes produce a finer finish. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1100° F. Color is gold.

Extra-life TiCN (titanium carbonitride) coating has better wear resistance than TiN coating. Maximum working temperature is 750° F. Color is dark gray.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1650° F. Color is black.

To Order: For coated end mills, please specify TiN, TiCN, or AlTiN.

Rounded-Edge Carbide End Mills

Put an end to chipped corners. Rounded edges on the tips of the flutes reduce chipping and extend tool life. Also known as corner radius end mills, they work well for mold applications. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are micrograin carbide and center cutting. Helix angle is 30°. Mill diameters 3/8″ and 1/2″ have a flat on the shank for better gripping power. Mill diameter tolerance is –0.001″, –0.002″; corner radius tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Long-life TiN (titanium nitride) coated end mills can be run at higher feeds/speeds and resist heat better than uncoated tools. Maximum working temperature is 1110° F. Color is gold.

To Order: Please specify corner radius from the table.

For information about end mill cut styles, see page 2487.

Miniature Carbide End Mills

Use where short, precise cuts are necessary. Made of premium submicrograin carbide. Shank diameter is 1/8″. Overall length is 1 1/2″. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are center cutting and have a 30° helix angle. Mill diameter tolerance is ±0.0005″.

Square-end end mills allow plunge cuts in a surface. *Short flute* length of cut is the mill diameter multiplied by 1.5. *Regular flute* length of cut is the mill diameter multiplied by 3. *Long flute* length of cut is the mill diameter multiplied by 5.

Ball-end end mills machine rounded details into a workpiece.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds. *Extra-life TiCN (titanium carbonitride)* coating resists wear. Maximum working temperature is 750° F. Color is light violet.

Super-life TiAlN (titanium aluminum nitride) coating is best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

To Order: For coated end mills, please specify coating: TiCN or TiAlN.

High-Performance Carbide End Mills for Titanium

Designed with titanium in mind—three flutes and a 45° helix angle provide superior shearing and chip removal. All are micrograin carbide coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Use on titanium alloys and nickel-based alloys. Max. working temp. is 1470° F. Color is red-violet. All are square end and center cutting for plunge cuts. Mill diameter tolerance is +0.000″, –0.003″.

For information about end mill cut styles, see page 2487.

High-Performance Carbide End Mills for Mold Steels

Get better results milling mold steels at high feeds/speeds. All have a high-temperature AlTiN (aluminum titanium nitride) coating for extended life, heat resistance, and dry or semidry machining. Mill diameter tolerance is +0.000″, –0.001″. Maximum working temperature is 1650° F. Color is purple-gray. Choose end mills based on the Rockwell hardness of material to be machined. *End mills for hardness up to C52* are standard carbide; *end mills for hardness up to C62* are premium sub-micrograin carbide.

Two-flute ball-end end mills provide better chip clearance for rough and finish milling of contours and complex shapes. They are center cutting and have a 15° helix angle.

Six-flute rounded-edge end mills, also known as corner radius end mills, produce a fine finish. They are square end and noncenter cutting. Helix angle is 45°. Corner radius is 0.020″.

High-Performance Carbide End Mills for Stainless Steel and High-Temp. Alloys

Three Flute Rounded Edge

Three Flute Ball End

Five Flute Square End

Machine stainless steel and high-temperature alloys with ease. Made of extra-fine grain carbide with a super-life TiAlN (titanium aluminum nitride) coating for extended life, heat resistance, and higher feeds/speeds in dry applications. End mills are center cutting and have a mill diameter tolerance of +0.000″, –0.002″. Maximum working temperature is 1470° F. Color is purple-gray.

Three-flute end mills provide good chip clearance and have a 35° helix angle. *Rounded-edge* end mills' corner radius is 0.008″-0.010″ for mill diameters 1/8″-3/16″, 0.015″-0.020″ for mill diameters 7/32″-7/16″, and 0.030″-0.035″ for mill diameters 1/2″-1″. *Ball-end* end mills machine rounded details into a workpiece.

Five-flute square-end end mills allow plunge cuts into a surface and produce a fine finish. Helix angle is 45°.

High-Performance Diamond-Coated Carbide End Mills for Nonmetals

Designed for machining graphite and other nonmetals, diamond-coated tools are stronger, last up to 30 times longer, and can run 2-3 times faster than other carbide end mills. Made of premium sub-micrograin carbide. Four flutes provide a fine finish. All are center cutting. Helix angle is 30°. Mill diameter tolerance is +0.001″, –0.001″.

Square-end end mills allow plunge cuts. ***Ball-end*** end mills machine rounded details into a workpiece.

For information about end mill cut styles, see page 2487.

High-Performance Carbide End Mills for Aluminum

Two Flute Square End

With their premium extra-fine grain carbide composition and extra-life TiCN (titanium carbonitride) coating, these end mills are engineered to mill aluminum and soft coppers. They resist wear and shock better than other carbide end mills for aluminum. Two flutes provide better chip clearance, while three flutes produce a finer finish. All are center cutting. Helix angle is 45°. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 750° F. Color is purple-gray. ***Square-end*** end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Carbide End Mills for Aluminum

Four Flute

These micrograin carbide end mills machine smooth cuts in aluminum as well as other nonferrous metals and nonmetallic material. They can also be run at higher feeds/speeds than other carbide end mills. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Reduced-Vibration Carbide End Mills

Chamfer Edge

Unequal spacing between the flutes reduces vibration for smooth, silent machining. Also known as variable-helix end mills, these tools remove large amounts of material and leave a fine finish at high feeds/speeds. All have four flutes and are center cutting. Mill diameter tolerance is +0.000″, –0.002″.

Square-end end mills allow plunge cuts in a surface. They have a super-life TiAlN (titanium aluminum nitride) coating. Maximum working temperature is 1500° F. Color is purple-gray.

Chamfer-edge end mills have a 45° corner chamfer for improved cutting edge strength in roughing cuts. Chamfer width is 0.020″. All have a super-life TiAlN (titanium aluminum nitride) coating. Maximum working temperature is 1500° F. Color is purple-gray.

Ball-end end mills machine rounded details into a workpiece. They have a high-temperature AlTiN (aluminum titanium nitride) coating. Maximum working temperature is 1470° F. Color is blue-gray.

Reduced-Vibration Carbide End Mills for Stainless Steel and High-Temp. Alloys

Finishing

A variable helix angle of 36°-38° reduces vibration for smooth machining. All are solid carbide coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Mill diameter tolerance is +0.000″, –0.002″. Maximum working temperature is 1650° F. They are square end and center cutting, allowing plunge cuts into a surface.

Roughing end mills remove large amounts of material at high speeds. ***Finishing*** end mills produce a fine finish.

For information about end mill cut styles, see page 2487.

Diamondlike-Coated Carbide End Mills for Nonmetals

Four Flute Square End

The diamondlike carbon coating is very hard and highly abrasion resistant. Tools are premium sub-micrograin carbide for roughing and finishing cuts in composites, green ceramics, carbon fiber, PVC, acrylic, ABS, nylon, PTFE, and fiberglass. Two flutes provide chip clearance, while four flutes produce a finer finish. All are center cutting and have a 33° helix angle. Mill diameter tolerance is ±0.0005″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Miniature Diamondlike-Coated Carbide End Mills for Nonmetals

Square End

Small mill diameters cut fine details in hard-to-reach spots. Their diamondlike carbon coating is very hard and highly abrasion resistant for use on graphite and other nonmetals. They are made of premium sub-micrograin carbide and have three flutes, except 3/16″ and 1/4″ mill diameters have four flutes, for a fine finish. All are center cutting and have a 35° helix angle. Mill diameter tolerance is +0.000″, –0.001″, except 1/8″ to 1/4″ mill diameters are +0.000″, –0.002″.

Square-end end mills allow plunge cuts into a surface. ***Ball-end*** end mills machine rounded details into a workpiece.

Smooth-Finish Fast-Spiral Carbide End Mills

A high 60° helix angle increases the cutting force while three flutes produce a smooth finish on stainless steel, titanium, and Inconel. All are made of micrograin carbide. They are square end and center cutting, allowing plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.0015″, except 1/8″ is +0.000″, –0.001″.

Long-life TiN (titanium nitride) coated tools last longer than uncoated tools and can be run at higher feeds/speeds. Maximum working temperature is 930° F. Color is gold.

Finishing Carbide End Mills

You won't believe the smoothness of a five-flute finish. End mills also excel at cutting tough-to-machine materials such as stainless steel, titanium, and titanium alloys. Made of premium sub-micrograin carbide, they are square end and center cutting, allowing plunge cuts into a surface. Helix angle is 45°. Mill diameter tolerance is +0.000″, –0.002″.

Uncoated end mills are for general milling applications.

Coated end mills last longer and can be run at higher feeds/speeds.

Extra-life TiCN (titanium carbonitride) coating resists wear. Maximum working temperature is 750° F. Color is light gray.

High-temperature AlTiN (aluminum titanium nitride) coating is best for very high feeds/speeds. Maximum working temperature is 1650° F. Color is blue-gray.

To Order: For coated end mills, specify coating: TiCN or AlTiN.

Light-Finish Carbide Bur End Mills

Fine

Coarse

Multiple intersecting flutes make these the choice for light stock removal. They can also be used for finishing on heat-treated die steels, stainless steel, and graphite. All are made of micrograin carbide. They are square end and center cutting, allowing plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.003″ for 1/8″ through 1/4″ mill diameters and +0.000″, –0.004″ for all others.

Coarse end mills remove material faster than fine end mills, but leave a rougher finish.

For information about end mill cut styles, see page 2487.

Roughing Carbide End Mills

Remove large amounts of material at high speeds on medium- to high-tensile steels, stainless steels, and high-temp. alloys. All are premium sub-micrograin carbide and have four flutes. They are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.0000″, –0.0035″.

Long-life TiN (titanium nitride) coated end mills are good for basic milling jobs. Maximum working temperature is 840° F. Color is gold.

Super-life TiAlN (titanium aluminum nitride) coated end mills are best for high-speed, high-temperature applications. Maximum working temperature is 1560° F. Color is purple-gray.

Roughing Carbide End Mills for Aluminum

Specially designed for aluminum, these incorporate a staggered pitch angle the full length of the cutting edge for complete chip removal. All are solid carbide and have three flutes. They are square end and center cutting for plunge cuts. Helix angle is 30°. Mill diameter tolerance is +0.000″, –0.002″.

Reduced-Vibration Roughing Carbide End Mills

Four flutes with variable helix angle of 30° to 32° remove large amounts of material and reduce vibration for smooth machining. All are made of solid carbide and are coated with a multilayered blend of long-life TiN (titanium nitride) and super-life TiAlN (titanium aluminum nitride) for extended life and heat resistance. Max. working temp. is 1470° F. All are square end and center cutting, allowing for plunge cuts into a surface. Mill diameter tolerance is +0.000″, –0.002″.

Square Tool Bit Flat-Surface Cutters

Also known as fly tool cutters, these are used with square tool bits (sold separately on page 2516) for machining flat surfaces. Compared to standard end mills, they make wider cuts, produce less vibration, cut thin materials easily, and can be run at faster speeds. Made of hardened steel.

Straight-Flute Carbide End Mills

Make light cuts on cast iron and other very hard, abrasive materials, as well as on thin sheeting where spiral flutes would lift the material. All are premium sub-micrograin carbide and have two flutes. They are center cutting for plunge cuts. Mill diameter tolerance is +0.000″, –0.002″.

Straight-Flute Carbide-Tipped End Mills

Four straight flutes tipped with premium sub-micrograin carbide produce fine finishes on very hard, abrasive materials such as cast iron, ductile iron, malleable iron, and nonferrous metals. Tool body is made of high-speed steel. All are square end and noncenter cutting. Mill diameter tolerance is +0.005″, –0.000″.

Carbide Drill/Mills

Four Flute

A pointed tip on these tools makes them capable of drilling, slotting, spotting, and other milling operations. Two flutes provide better chip clearance, while four flutes produce a finer finish. All are made of premium sub-micrograin carbide and have a 90° point angle and a 30° helix angle. Mill diameter tolerance is +0.000″, –0.003″.

Coated end mills last longer and can be run at higher feeds/speeds.

Long-life TiN (titanium nitride) coating has a maximum working temperature of 1110° F. Color is gold. *High-temperature AlTiN (aluminum titanium nitride)* coating is best for very high feeds/speeds. Maximum working temperature is 1450° F. Color is purple-gray.

To Order: For coated end mills, please specify TiN or AlTiN.

Three-piece set includes an uncoated two-flute drill/mill in 1/4″, 3/8″, and 1/2″ mill diameters. Comes in a plastic case.

For information about end mill cut styles, see page 2487.

Replaceable Carbide-Insert End Mills

Use on low-horsepower Bridgeport and similar milling machines. Add positive-rake triangular carbide inserts which can be replaced when worn or chipped (not included, see pages 2518-2519). End mills with a 1/2″ shank dia. use insert style TPG-221 through 223. All others use TPG-321 through 324. Tool body is steel. All are noncenter cutting. ***R8 shanks*** have a 7/16″-20 internal thread.

Replacement parts fit end mills with a 3/4″ to 3″ mill diameter.

Large-Diameter High-Speed Steel Face Milling Cutters

Also known as shell cutters, these tools have a large diameter for face and side milling. All require the use of an R8 shank arbor (sold separately below). Milling cutters are noncenter cutting and have a 30° helix angle. Mill diameter tolerance is +0.015″, –0.000″.

Mill Dia.	Hole Dia.	Face Wd.	No. of Teeth

Large-Diameter Replaceable Carbide-Insert Face Milling Cutters

Create versatile face mills, also known as indexable face mills, by combining a cutter body and carbide inserts (both sold separately).

Cutter Bodies

Remove metal 2-5 times faster with these carbide cutter bodies than comparable high-speed steel face mills. An R8 shank arbor is required (sold separately above). All cutter bodies accept octagon, round, and square carbide inserts (sold separately).

Shown with Octagon Inserts (Sold Separately)

Carbide Inserts

Octagon inserts are for general face milling. They generate smooth cuts with eight cutting edges.

Round inserts are the strongest. Use for roughing and heavy cuts.

Square inserts are used when a shoulder is required, with or without a radius.

To Order: Please specify shape.

V-Slot Cutters

A single pass cuts a V-shaped slot. Also known as double-angle milling cutters, they can also mill notches, serrations, angles, and chamfers. All are high-speed steel. Overall length ranges from 2 3/8″ to 3 1/8″. Cutter diameter and face width tolerances are +0.015″, –0.000″.

Bevel Cutters

Make uniform bevel cuts in your workpieces. All cutters are high-speed steel with a long-life TiN (titanium nitride) coating for heat resistance and faster feeds/speeds. Overall length ranges from 2 1/8″ to 2 3/4″. Cutter diameter tolerance is +0.010″, –0.000″. Maximum working temperature is 1100° F. Color is gold.

Keyseat Cutters

Straight Tooth

Staggered Tooth

Also known as Woodruff keyseat cutters, tools mill precise notches in shafts. They can also be used for slot milling. Cutters have a 1/2″ diameter shank and an overall length of 2 1/16″ to 2 3/8″. Face width tolerance is +0.0000″, –0.0010″.

Straight-tooth cutters work well on high-carbon steel and cast iron. *Carbide* cutters are premium sub-micrograin carbide for fast, smooth cuts. ***Staggered-tooth*** cutters have an alternating right- and left-hand helix for efficient cuts in mild steel, aluminum, and brass.

Narrow-Width Keyseat Cutters

Cut narrow Woodruff keyseats. All cutters are high-speed steel and have straight teeth. Shank is 2″ long from under the head and has a 1/2″ diameter. Face width tolerance is +0.0000″, –0.0005″.

Also Available: Cobalt steel cutters. Please ask for 2970A81 and specify face width and cutter diameter.

Straight- and Staggered-Tooth Milling Cutters

With peripheral and side teeth, cutters remove chips for consistent cutting width. All are made of high-speed steel and have a standard keyway. Cutter thickness tolerance is ±0.001″.

Straight-tooth cutters are thinner, have more teeth, and leave a finer finish than staggered-tooth cutters. Use for thin slots and plunge cuts. Cutter diameter tolerance is ±0.015″.

Staggered-tooth cutters are for deep slots and other applications requiring maximum chip clearance. Also known as side-milling cutters, they have alternating right- and left-hand helical teeth to remove more metal at higher feeds/speeds than straight-tooth cutters. The keyway lets you interlock two or more cutters of the same diameter so you can customize the thickness of the cutter to match the slot width you require. Cutter diameter tolerance is +0.015″, –0.000″.

Vibration-Reducing Arbors for Milling and Slitting Cutters

A low-profile cap on these arbors absorbs vibration and adds support and rigidity. Made of heat-treated steel. Use with straight-tooth milling cutters on this page and the slitting cutters on page 2512.

High-precision arbors are for use with carbide cutters and high-rpm CNC machines.

Three-piece arbor sets include a wood stand.

Slitting Cutters

Also known as metal slitting saws, these cutters do not have side teeth, making them the choice for thin slitting and slotting jobs. They are ground concave for free cutting through your workpiece. See page 2511 for arbors.

When choosing a cutter, consider the diameter and the number of teeth. A cutter with a smaller diameter provides better rigidity.

To determine how many teeth your cutter should have, follow these guidelines:

1. Always have at least three teeth in the cut.
2. Use more teeth for thin and hard materials.
3. Use fewer teeth for soft materials and larger sections.

General purpose high-speed steel cutters are best for cutoff, slitting, and slotting applications. Cutters with a 2¾″ dia. are also known as screw slotting saws; other diameters are also known as plain metal slitting saws. All have a standard keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.001″.

Smooth-finish high-speed steel cutters are also known as jewelers' slotting saws. Use for very thin materials, such as wire, tubing, and extrusions requiring delicate cuts. Cutters do not have a keyway, except those with a 1″ hole diameter have a standard keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.001″.

Long-lasting solid carbide cutters can be used for climb (down) milling rather than conventional (up) milling for better tooth engagement and finish. Cutters do not have a keyway. Cutter diameter tolerance is ±0.015″; thickness tolerance is ±0.00025″.

Gear Cutters

Mill spur or pinion gears with a 14½° pressure angle. Also known as involute gear cutters, cutters may be sharpened repeatedly. All are high-speed steel and have a standard keyway. Determine the cutter number you need based on the number of teeth in your gear.

To Order: Please specify the cutter number (1-8) from the chart at right.

No. of Teeth to Be Cut	Please Specify Cutter No.	No. of Teeth to Be Cut	Please Specify Cutter No.
135 and Up	1	21 to 25	5
55 to 134	2	17 to 20	6
35 to 54	3	14 to 16	7
26 to 34	4	12 to 13	8

About Keyway Broaches

Keyway broaches are straight, multitoothed, high-speed steel cutting tools for making keyways. Each tooth's cutting edge is a few thousandths of an inch larger than the one before. The cutting edges increase until they reach the required size. Broaches are for use in hand and hydraulic arbor presses and are great for maintenance and short-run production operations.

Bushings for keyway broaches rest inside the arbor hole of your workpiece. They have a slot that works as a guide for broaches. With bushings, you can use a single broach in a variety of arbor holes. Bushings for smaller arbor holes are collared for easier handling. The collar rests on top of the workpiece rather than being supported from below.

Shims for keyway broaches slide between the broach and bushing to set the depth of the keyway.

Note: Broaches have a style designation of A, B, B1, C, C1, D, D1, or E. For proper fit, broaches, bushings, and shims used together must have the same letter designation.

Keyway Broach Sets

Sets contain combinations of broaches and bushings and include the necessary shims. They come in a wood box.

Shims for Keyway Broaches

When broaching in multiple passes, shims are necessary to ensure full keyway depth. All are made of steel. Use with the keyway broaches on page 2514.

Keyway Size	Broach Style	Shim Thick.	Shim Lg.

For information about keyway broaches, see page 2513.

Keyway Broaches

Cut precision keyways with these push-style broaches. All are made of high-speed steel and include the required shims. A bushing is also required (sold separately on this page). Metric broaches meet ISO standards.

Long-life TiN (titanium nitride) coated broaches offer increased hardness, heat resistance, and lubricity for extended life.

Bushings for Keyway Broaches

Collared

Plain

Use individual keyway broaches in a variety of arbor hole sizes. Bushings act as guides to ensure rigid and accurate keyway cutting. Use with the keyway broaches on this page. Made of steel.

To Order: Please specify bushing diameter from those listed in the table.

Square and Hexagon Broaches

Square

Hexagon

Transform round holes into finely finished square- and hex-shaped holes. Broaches are push style and made of high-speed steel. Square/hex size tolerance is ±0.0005″ for inch sizes; –0.0102 mm to +0.0127 mm for metric sizes. Tolerances are based on actual size. Drill a pilot hole into your workpiece using the drill size listed. Use with hand and hydraulic arbor presses. No shims or bushings are required.

Square broaches have a square shank.

Hexagon broaches have a round shank, except 5/8″ and larger hex size have a hex shank.

For tool posts and tool holders, see page 2525. For information about tool bit materials, see page 2520.

Single-Point Carbide-Tipped Tool Bits

Style AR

Style AL

★ Right-hand tool shown.

The combination of a brazed tip and a steel shank provide these tools with the strength and flexibility needed for precise lathe work. All are finished and ground. When used in a lathe, styles AR, BR, FR, GR, and ER are fed from right to left (as shown above). Styles AL, BL, FL, GL, and EL are fed from left to right.

Choose from two popular grades—Grade C-6 and Grade C-2. *Grade C-6* is excellent for machining steel. These bits are comparable to Kennametal K21, Seco 370, and Wesson VR75. *Grade C-2* is best for cast iron and nonferrous metals. These are comparable to Kennametal K68, Seco 883, and Wesson 2A5.

Single-Point Diamond-Tipped Tool Bits

Style AR

AR★ AL E

★Right-hand tool shown.

If a carbide tip doesn't quite cut it for your job, look no further. The PCD (polycrystalline diamond) tip on these tool bits is ideal for higher speeds on nonferrous and nonmetallic materials such as aluminum, copper, magnesium, fiberglass, rubber, sintered ceramics, plastics, carbon, and carbide. At lower speeds, the tip lasts hundreds of times longer than carbide and resists chipping better than a natural diamond tip.

Styles AR and ***AL*** bits have a 6° lead angle. Use for turning, facing, and boring. ***Style E*** bits have a 60° included angle. Use for threading, chamfering, and undercutting.

Radius-Cutting Carbide-Tipped Tool Bits

Concave Bit

Convex Bit

Concave Convex

Form a perfectly round concave or convex radius on your workpiece by using these tool bits. All bits are right-handed. Radius tolerance is ±0.001".

Choose from Grade C-6 and Grade C-2 carbide tips. Use *Grade C-6* for machining steel and *Grade C-2* for general purpose machining of cast iron and nonferrous metals. **To Order:** Please specify Grade C-6 or Grade C-2.

Square Tool Bit Blanks

Create your own custom tool bits by grinding these blanks down to the size and shape you need.

High-speed steel and ***cobalt high-speed steel*** tool bits have 10° beveled ends.

High cobalt cast alloy tool bits have one 7° beveled end and one square end.

Lathe Chuck Wrenches

Standard

Self-Ejecting

You don't need strength to open tight lathe chucks; you need leverage. The long T-handle of these wrenches gives you just that. Also known as lathe chuck keys.

Self-ejecting wrenches prevent injuries and damage to the machine by automatically ejecting when hand pressure is released.

Standard Wrenches

Square Size	Handle Lg.	O'all Ht.		Each

Carbide Insert Holders

Assemble the exact lathe tool you need by pairing these holders with a carbide insert (sold separately on pages 2518-2519). Use with manual and CNC lathes. For replacement screws, see page 3085.

Multi-lock tool holders are furnished with a clamp, clamp screw, lock pin, and insert seat (unless noted).

Screw-lock tool holders include a screw for holding the insert.

Clamp-lock tool holders are furnished with a clamp, clamp screw, insert seat, and screw (unless noted).

To Order: Please specify right-handed or left-handed tool where applicable.

Note: Illustrations are for right-handed tools, except where tools are noted as non-handed. Left-handed tools look the exact opposite.

Carbide Inserts

From heavy material removal to finishing, these inserts are a great choice for your machining needs. Insert holders sold separately on page 2517.

Coated High-Performance— Have a multilayered coating for maximum wear and heat resistance. Use for roughing to medium machining on steel, stainless steel, cast iron, high-temperature alloys, nonferrous metals, plastics, and hardened materials. Coated using a chemical vapor deposition (CVD) process, except grades TN6010, R321, and C-2, which are coated using a physical vapor deposition (PVD) process. All are comparable to Sandvik GC4035, GC1005, and GC1015, Seco TP3000, and Valenite VP5535 and VP5515. *Grade RC3503* has a TiN and ceramic coating. *Grades RC1502* and *C-2* have a TiN and titanium aluminum nitride coating. *Grades TN7115, TN7125, TN7135, TN5120, RC5015, TN7110,* and *TN5105* have a TiN, ceramic, and aluminum coating. *Grade TN6010* has a titanium aluminum nitride coating. *Grades RC906* and *925* have a ceramic, titanium carbide, and aluminum coating. *Grade RC706* has a TiN coating. *Grade R321* has a TiN, ceramic, and titanium carbide coating. *Grade CW2015* has a ceramic and aluminum coating.

Uncoated High-Performance— Use for light roughing to finishing. All are equivalent to Kennametal K68 and K313, Sandvik H13A, Seco 883, and Valenite VC2. *Grades THM* and *CQ2* are for use on cast iron, high-temperature alloys, and hardened materials. *Grade CQ23* is for use on aluminum, high-temperature alloys, plastics, and other nonmetals. *Grade SPTM00* is for use on steel and stainless steel.

General Purpose— *TiN-coated* inserts are grade C-5 for making interrupted cuts on steel, stainless steel, and high-strength alloys.

Uncoated inserts come in Grade C-5 for use on steel, and Grade C-2 for use on cast iron and nonferrous metals. **To Order:** Please specify Grade C-5 or Grade C-2, unless noted.

♦ IC=Inscribed circle. ■ Prices are approximately 15% lower when you buy in quantities of 10 or more. ★ Neutral rake.

Three-Point Carbide-Insert Tool Bits

Style AR

★ Right-hand tool shown.

There's no need to find another tool bit when one point dulls—just rotate the insert and use another point. These bits include a carbide insert with three cutting points that provide them with a longer tool life than solid bits. When all three points are dull, don't replace the tool—just replace the insert. All tool bits include a carbide insert with 1/64″ tip radius, positive rake, and built-in chipbreaker. Furnished with hold-down screws. Tool bits are sold individually and in convenient five-piece sets.

Styles AR and ***AL*** have a 0° lead angle. Use for turning or facing to a 90° square shoulder.

Styles BR and ***BL*** have a 15° lead angle. Use for turning or facing where a square shoulder is not required.

Style E is neutral with a 60° included angle for turning, threading, boring, facing, chamfering, and V-grooving.

Carbide inserts have a positive rake and built-in chipbreaker. *Grade C-5* inserts are for general purpose machining of steel. *Grade C-2* inserts are for use on cast iron and nonferrous metals. *TiN-coated C-5* inserts offer increased productivity and longer life than uncoated inserts. To determine which insert size you need, match the IC shown with your tool insert IC.

About Cutoff Blade and Tool Bit Materials

When ordering cutoff blades and tool bits, it's important to understand how materials differ from one another and how this affects their ability to work in certain applications.

Heat resistance, or red hardness, refers to a tool's ability to retain its hardness when heated until it turns a dull red color.

Wear resistance, or abrasion resistance, refers to how well a tool resists the wear of its operating surface, especially at exposed edges.

Shock resistance, or toughness, measures how well a tool sustains suddenly applied loads, impacts, and interrupted cuts.

Note: The following chart should be used only as a general guide when choosing cutoff blades and tool bits.

Material	Heat Resistance	Wear Resistance	Shock Resistance	Best Applications
M-2 HSS	Good	Good	Very Good	General applications on most ferrous and nonferrous alloys
M-3 HSS	Good	Very Good	Good	Abrasive materials (cast alloys, nonferrous metals, plastics)
M-35 Cobalt HSS	Very Good	Good	Good	High-strength steels and soft, gummy materials
M-42 Cobalt HSS	Excellent	Very Good	Good	Cast iron, stainless steel, high-strength alloys (titanium, Inconel)
M-45 Cobalt HSS	Excellent	Very Good	Good	High-tensile strength, heat-resistant alloys and stainless steel
C-2 Carbide-Tipped	Excellent	Excellent	Very Good	Cast iron, nonferrous metals, and high-temperature alloys
C-5 Carbide-Tipped	Excellent	Excellent	Very Good	Machining of steel
C-6 Carbide-Tipped	Excellent	Excellent	Very Good	Machining of steel
T-15 HSS	Very Good	Excellent	Not As Good	Fast speeds on high-tensile strength steels
PM T-15 HSS	Very Good	Excellent	Very Good	Tough materials, such as stainless steel, titanium, and Inconel
PM M-48 HSS	Excellent	Excellent	Very Good	Tough materials, such as stainless steel, titanium, and Inconel
High Cobalt Cast Alloy	Best	Best	Not As Good	High removal rates—use high impact grade for interrupted cuts

Chipbreaking Cutoff Blades

End View of Blade

The ground top surface of these T-shaped blades collapses chips as you work. This reduces friction and allows chips to escape the narrow cut.

Use with any tool holder that accepts T-shaped blades (see 31805A on page 2525).

M-2 high-speed steel blades are for general purpose use on most ferrous and nonferrous metals.

M-35 cobalt high-speed steel blades are ideal for heavy cutting on difficult-to-machine metals.

Double-end carbide-tipped blades have micrograin Grade C-2 carbide tips on both ends, which are designed for general purpose use on cast iron and nonferrous metals.

Carbide-Insert Cutoff and Grooving Tools

A more versatile option than one-piece cutoff blades, these tools use a carbide insert that enables you to change only the insert instead of the entire blade. Use for light and heavy duty cutoff and grooving applications on solid rods and tubing.

For a complete tool, you'll need a tool block, insert-holder blade, and carbide insert, or just an insert holder with integral shank and carbide insert (each sold separately).

Tool Blocks for Insert-Holder Blades

Designed for stability and strength, these tool blocks correctly align and firmly hold your insert-holder blade. Blocks are neutral; use for right- and left-handed machining on manual and CNC machines.

Shown with Insert-Holder Blade and Carbide Insert (Each Sold Separately)

(A)	(B)	O'all Lg.	For Use with Insert-Holder Blade Nos.	Each

Carbide Inserts

Inserts permit free chip flow and minimize chip buildup by producing easy-to-remove, C-shaped chips. Use inserts with a neutral, 0° lead angle for cutoff and grooving applications on solid rods; use inserts with a right-handed, 8° lead angle for cutoff applications on tubing.

Grade C-5 inserts are for steel and 400-series stainless steel. ***Grade C-2*** inserts are for cast iron, high-temperature alloys, and nonferrous metals. ***TiN (titanium nitride)-coated Grade C-5*** inserts are for high speeds and interrupted cutting on steel and 400-series stainless steel.

Insert Holders with Integral Shank

No need for a tool block—the shank of these holders fits directly into a lathe post or an appropriately sized tool holder. With a tapered opening at one end, these tools firmly hold your insert in place. All are right-handed. An insert extractor tool is included.

Shown with Carbide Insert (Sold Separately)

Carbide-Tipped and Cobalt Steel Boring Tools

Carbide-Tipped

Cobalt Steel

The combination of strength and rigidity makes these tools ideal for all types of precision boring operations. They have an offset taper that provides additional clearance to prevent chips from clogging the hole. All are right-handed and have a round shank that is ground to fit standard holders.

Carbide-tipped boring tools have a heat-treated alloy steel shank with a black-oxide coating for extra durability. Choose *Grade C-6* carbide for use on steel or *Grade C-2* carbide for use on cast iron and nonferrous metals. **To Order:** Please specify Grade C-6 or C-2.

Cobalt steel boring tools are made of M-42 cobalt steel and are for use on cast iron, stainless steel, and high-strength alloys.

Small-Diameter Solid Carbide Boring Tools

The smallest of the boring tools we offer, tools are made of solid micrograin carbide to resist abrasion. All are right-handed and have flats on their shanks for quick setups. Use on most metals and plastics.

General Purpose Carbide-Insert Boring Tools

The three cutting points of the carbide insert give these boring tools a longer life than their carbide-tipped counterparts. When one point dulls, simply rotate the insert for a new cutting point. Tools are reusable; just replace the insert when all three cutting points are dull. All have a round shank so you can set positive and negative rake angles. They include a carbide insert with a 1/64" radius and built-in chipbreaker.

Carbide inserts have a built-in chipbreaker. *Grade C-5* inserts are for use on steel. *Grade C-2* inserts are for use on cast iron and nonferrous metals.

High-Performance Carbide-Insert Boring Tools

Boring Bar with Carbide Insert (Sold Separately)

The replaceable carbide insert of these tools stands up to the toughest jobs. Boring bars and carbide inserts sold separately.

Boring bars have a through-hole for coolant and a round shank, unless noted. All are right-handed and have a 5° lead angle, unless noted. *Boring bars with carbide shanks* have an alloy steel head. Use for maximum rigidity and deeper boring.

TiN-coated micrograin carbide inserts provide exceptional performance as well as increased cutting ability and extended tool life. They have a built-in chipbreaker and tip radius of 0.007″, unless noted. Use on steel, stainless steel, and nickel-based alloys.

Also Available: Replacement torx screws and torx keys for holding carbide inserts. Please ask for 3315A91 and specify the boring bar part number listed in the table below.

♠ 7° lead angle. ♦ Have flats on the shank. ★ Tip radius is 0.015″.

Boring Bars for TCMT Carbide Inserts

Pair these boring bars with TCMT inserts (sold separately on page 2518). Shanks are round, made of steel, and come with one insert screw and one torx key. All have a 3° lead angle.

Use 3/8″, 1/2″, and 5/8″ dia. shanks with TCMT-21.50.5, TCMT-21.51, and TCMT-21.52 inserts. Use 3/4″ and 1″ dia. shanks with TCMT-32.51 and TCMT-32.52 inserts.

Adjustable-Length Carbide Boring Tools

Boring Tool with Holder (Sold Separately)

The only good vibrations are no vibrations. With these two-piece tools, you can eliminate vibration by adjusting the length of the boring bar. Tools are comprised of a boring tool and holder (each sold separately).

Boring tools are right-handed and made of Grade C-6 solid carbide. Suitable for general purpose use on steel.

Boring tool holders are made of hardened and ground steel and have a round shank. Wrench is included.

Double-Angle Boring Tools

Bit Holder with Tool Bits (Sold Separately)

For added versatility, these boring tools have one end angled at 45° and the other at 90°. A set screw holds the tool bits firmly in place. Use with boring bar tool holders (sold separately on page 2525). Bit holders and tool bits are sold separately.

Bit holders are made of steel and have a round shank. Use both right- and left-handed.

Tool bits are made of M-2 high-speed steel. Use on most metals.

Precision Boring Heads

When used with one of the interchangeable shanks, these double-bar boring heads allow you to bore on a vertical milling machine instead of a lathe. These heads have a round body design with two vertical holes and a horizontal cross hole for holding boring bars. They also have a large bearing surface for heavy roughing cuts as well as accurate finish cuts. A micrometer adjusting screw with graduated dial face enables direct readings and easy changes; one graduation on the screw adjusts the head to remove 0.001″ from the bore diameter. With the screw's wide adjustment range, there's no need for offset bars and special setups. Boring heads and interchangeable shanks are sold separately.

Turning Tool Bit Holders

Straight Shank

Right-Hand Offset

Left-Hand Offset

For use with square shank tool bits, these holders use set screws to keep your turning tools in place. Holders are constructed of heat-treated alloy steel and are furnished with one wrench. Tool bits not included, see pages 2515-2516 and page 2520. **To Order:** Please specify straight shank, right-hand offset, or left-hand offset.

For Lathe Swing	For Bit Size	Tool Holder Size, Wd. × Ht. × Lg.		Each

13" to 16"	5/16"	1/2" × 1 1/8" × 6"	3298A72	23.80
16" to 18"	3/8"	5/8" × 1 3/8" × 7"	3298A73	26.79

Hand Knurling Tools

Standard Duty

Lightweight and portable, tools easily go with you to the job site. Their three-knurl design provides equal pressure on all sides of the workpiece for an even finish. All are self-centering and adjustable for various workpiece diameters. Tools include a set of straight pattern knurls with 25 teeth per inch.

Standard Duty— Has a cast steel frame. Furnished in a plastic case.

Heavy Duty— Has a larger capacity and a heat-treated steel frame to withstand continuous use.

Also Available: Replacement knurls (set of three) for standard duty tools. Please ask for 3328A12 and specify teeth per inch (16, 25, or 33) and knurl pattern (diamond or straight). For replacement knurls for heavy duty tools, see 3330A, 33425A, 3340A, and 3371A (sold separately on page 2525).

	Knurling Capacity	Knurl Size: Knurl Dia.	Face Wd.	Hole Dia.	O'all Lg.		Each
Standard Duty	1/8"-1"	1/2"	1/4"	3/16"	12 1/2"	3328A1	$139.02
Heavy Duty	1/4"-2"	3/4"	3/8"	1/4"	12"	3328A2	271.45

Grooving Tools for Retaining Rings

Use to easily cut square-corner grooves for retaining rings. Made of solid micrograin carbide, these tools are right-handed and have flats on the shank for fast setups. Use on most metals and plastic.

Cutoff Blade Tool Holders

Straight Shank

Right-Hand Offset

Use these heat-treated alloy steel holders to firmly lock your cutoff tools in place. All holders are furnished with a wrench and fully support the blade to reduce breakage. Blade length is adjustable. Use with blades that have both ends beveled 10°. Cutting tools not included, see page 2521. **To Order:** Please specify straight shank or right-hand offset.

For Lathe Swing	For Blade Size, Wd. × Ht.	Tool Holder Size, Wd. × Ht. × Lg.		Each

Lathe Knurling Tools

Designed for power knurling on manual lathes, these tools fit directly in your lathe tool post. They are self-centering and have a revolving head with three pairs of knurls to eliminate time-consuming knurl changes.

Tools include a pair of knurls with 14 teeth per inch, a pair with 21 teeth per inch, and a pair with 33 teeth per inch. All the included knurls have a right- and left-hand spiral for producing a male diamond pattern.

For replacement knurls, see 3330A, 33425A, 3340A, and 3371A (sold separately on page 2525).

Shank Size, Wd. × Ht.	Knurling Capacity	Knurl Size: Knurl Dia.	Face Wd.	Hole Dia.	O'all Lg.		Each

5/8" × 1 5/8"	1/4" and Up	3/4"	3/8"	1/4"	7"	3332A54	292.92

High-Speed Steel and Cobalt Steel Knurls

Both sides of these circular-pitch knurls as well as their bore have a ground finish for close tolerances.

High-Speed Steel Knurls—Made of M-1 high-speed steel, these knurls are heat treated to Rockwell C63 for superior strength and wear resistance. They have extremely smooth teeth to provide a clean finish.

Cobalt Steel Knurls—Made of M-42 cobalt steel, these knurls are slightly harder for severe knurling operations on semihardened materials and stainless steel. Their teeth are extremely smooth to provide a clean finish.

TiN-Coated Cobalt Steel Convex Knurls—Made of M-42 cobalt steel, these knurls have a TiN-coating for extra durability. Their convex design is ideal for creating long knurling patterns along your part's axis. Use for severe knurling operations on semihardened steels and Type 303 stainless steel.

Straight knurls have a 90° included tooth angle except for the 50 and 80 teeth per inch knurls, which have a 70° included angle. ***Right-*** and ***left-hand spiral knurls*** have a 30° diagonal spiral.

Note: To produce a male diamond pattern, choose one right-hand and one left-hand spiral knurl.

To Order: Please specify number of teeth per inch (see table below).

Quick-Change Tool Posts and Holders

Known for their strength and durability, these tool posts and holders allow you to work with speed and precision. Dovetail mounts on the tool posts allow you to quickly change from one tool holder to another without loosening and tightening screws. Posts and holders (sold separately) are interchangeable with systems from Aloris, Dorian, and Armstrong. Use them with most manual and CNC lathes.

Tool Post

Tool Posts

With a handle for instant positioning and two dovetail mounts for quick tool holder changes, these tool posts allow you to work with speed and efficiency. Their locking system eliminates vibration and ensures repeated accuracy within millionths of an inch. The dovetail mounts are set 90° apart, allowing you to mount tool holders on either side. All tool posts are furnished with a machined T-bolt.

Tool Holders

No shimming—holders have a center height adjustment screw for a secure fit every time. Tool holder capacity listed is the maximum tool size. You can use smaller tools, but this may result in less rigidity and reduced cutting tool performance. Tool bits, boring bars, and other cutting tools not included. For tool bits, see pages 2515-2516 and page 2520. For cutoff blades, see pages 2520-2521. For boring bars, see page 2523.

(1) Turning and facing holders grip shanks close to the post for more rigidity. Use with high-speed steel and carbide square-shank tools.

(2) Turning, facing, and boring bar holders are suitable for holding high-speed steel and carbide square-shank tools. They also have a V-groove that enables them to grip round-shank boring bars.

(3) Heavy duty boring bar holders have four flat-head screws to lock down on the tool and provide maximum rigidity. Use with boring bars.

(4) Cutoff blade holders are for standard beveled blades with one end beveled, T-shaped cutoff blades, and high-speed steel blades.

5C and R8 Collets

5C Collet

R8 Collet

Round

Hexagon

Square

The most popular collets we offer, 5C and R8 collets are ideal when you need to machine a large number of parts that have the same diameter. All have split grooves, or slots, in the sides of the body that allow them to tightly grip the workpiece. The diameter of the workpiece held should be within +0.000″, –0.005″ of the collet size. These collets are made of hardened and ground tool steel. They have an accuracy of 0.00078″ total indicator readout (T.I.R.) measured at the nose of the collet.

5C Collets— Main body diameter is 1¼″. Overall length is 3.270″. They have 1.041″×24 RH internal threads and 1.238″×20 RH external threads.

R8 Collets— Main body diameter is 0.95″. Overall length is 4.089″. They have 0.4375″×20 RH internal threads.

Machinable-Face 5C Collets

Large-Diameter Collet

These collets have a soft face you can machine to handle unusual or odd-shaped workpieces.

Large-Diameter Collets— Also known as step collets, these are made of steel and have a hardened body. Collets have 1.238″×20 RH external threads.

Replaceable Head Collets— Also known as clutch collets, these allow you to switch head sizes instead of replacing the entire collet. To machine, simply insert the expander pin into the collet head and bore, mill, or step out to size. Remove the expander pin when finished. *Note:* Overall length refers to the length of the collet when assembled with the 5C adapter body. **To Order:** Please specify collet head material: aluminum or steel.

5C Adapter Body for Replaceable Head Collets— Has 1.238″×20 RH external threads.

Replaceable Head Collet and 5C Adapter Body (Sold Separately)

5C Adapter Body for Replaceable Head Collets.... 3311A21 Each $22.12

Lathe Chuck to 5C Collet Adapter

Shown with Collet (Not Included)

Instead of removing your lathe chuck when a job calls for a 5C collet, save time by just using this adapter. Made of hardened steel, it fits most conventional lathe chucks. The lock at the front of the adapter makes it easy to change collets. It is an excellent choice for short-production runs on a lathe or CNC machine. Adapter includes a hex key.

Dia.	Lg.		Each
3″	3 1/2″	3302A21	$398.74

5C Collet to Lathe Chuck Adapters

When your workpiece is too large for a 5C collet, these adapters can step right in and handle the job. They work on any machine with a 5C spindle. All are self-centering and have three jaws to securely grasp the workpiece. They have 7/8″×20 RH internal threads and 1.238″×20 RH external threads. Furnished with two sets of hardened steel jaws (internal and external) and a chuck key.

5C Emergency Collets

In just minutes you can bore or step out these emergency collets to any size up to 1⅛″ in diameter. Their soft face allows you to easily machine them to your desired size and shape.

These collets have a 1/16″ dia. pilot hole on the face, 1.041″×24 RH internal threads, and 1.238″×20 RH external threads. Collets are furnished with pins to lock the collet segments in place while machining; the pins should be removed once the collet is ready to be used.

Steel collet has a heat-treated body and threads.

Brass collet is recommended for holding soft and delicate work.

	Body Dia.	O'all Lg.		Each
Steel Collet	1¼″	3.270″	3209A12	$22.66
Brass Collet	1¼″	3.270″	3209A14	29.33

Expanding-Grip 5C Collets

Threaded like standard 5C collets, these collets expand to hold the inside diameter of the workpiece so you won't need a mandrel. All are made of steel for easy machining. They hold concentricity within 0.0005″ and have 1.238″×20 RH external threads. The front inch of the collets expands. Use on any machine with a 5C spindle.

Adjustable 5C Collet Stops

Collet Stop

Collet Stop with Optional Spring Ejector

Prevent parts from being pushed back into the collet while machining. Made of aluminum, these collet stops have an adjustable rod that makes installation and removal quick and easy. Simply slide the expanding sleeve into the back of your collet and tighten the nut. Adjust the depth of the rod by loosening the set screw with the included wrench. Use with 5C collets that have internal threads.

Optional spring ejector has a spring plunger that is ideal for taking out small parts that are difficult to remove.

ER-16, ER-32, and 100-TG Collets

ER-16 and ER-32 Collet

100-TG Collet

Collet Chuck for ER-16 Collets

All collets are made of hardened tool steel.

ER-16 and ***ER-32 Collets—*** Have a range of sizes so you'll need fewer collets. Collet diameters compress approximately 1/32″. Tolerance at the collet nose is 0.0003″.

ER-16 collets have a maximum body diameter of 0.677″ and an overall length of 1.06″. *ER-32 collets* have a maximum body diameter of 1.30″ and an overall length of 1.57″.

100-TG Collets— Collet diameters compress approximately 1/64″. Tolerance at the collet nose is 0.0003″. Maximum body diameter is 1.278″. Overall length is 2.386″.

Collet Chucks and Nut Wrenches— Collet chucks securely hold collets. Taper is CAT 40. Use a nut wrench to tighten the chuck nut.

5C Collet Wrench

Changing 5C collets on CNC lathes doesn't get much easier. With a steel head and reinforced plastic fins, this wrench allows you to quickly insert and remove your 5C collets. Handle is made of plastic. Body diameter is 1⅛″. Overall length is 4¼″.

3197A24 ..... **Each** $28.76

5C Collet Block Chucks

Square Block Chuck

Hex Block Chuck

Optional Lever Collet Closer

Pair block chucks with a 5C collet to hold your workpiece, and you can easily and accurately machine square and hex shapes or drill crossholes at 60°, 90°, and 120°. All are made of ground tool steel. They are made with ±0.0006″ flatness, squareness, and parallelism on their sides. Furnished with a tightening ring to close the collet.

The 5C collet capacity is 3/64″ to 1⅛″ for round collets, ⅛″ to ¾″ for square collets, and ⅛″ to 7/8″ for hexagon collets.

Optional lever collet closer replaces the tightening ring for faster opening and closing.

	Lg.	Wd. Across Flats		Each
Square Block Chuck	2¾″	1¾″	3245A22	$52.32
Hex Block Chuck	2¾″	1¾″	3246A22	52.32

5C Collet Fixtures

Compact Air-Operated

Heavy Duty Air-Operated

Manual

Quickly and easily grip and release parts with 5C collet fixtures. All use 5C collets (not included) to hold the parts.

Compact Air-Operated Collet Fixture

Small enough for mounting multiple fixtures in a limited amount of space, this fixture has an aluminum housing, four 3/8″ dia. mounting holes, and two air ports (1/4″-18 straight pipe thread, male). Maximum collet size is 1 1/16″. Holding power is 7 1/2 times the air-line pressure.

Compact air-operated collet fixture kit includes the compact air-operated fixture described above, four-way foot-operated air valve, and three air hoses.

Dia.	Ht.	Max. Air Pressure, psi		Each
5 1/2″	3 1/4″	150	5317A13	$227.24
Compact Air-Operated Collet Fixture Kit			5317A21 Each	$361.71

Heavy Duty Air-Operated Collet Fixture

Use with step collets for internal gripping. Base is made of cast iron; collet holder is made of steel. Fixture has two 5/8″ slots for mounting (lugs included), two air ports (1/4″-18 straight pipe thread, male), and a 17/64″ dia. hole through the unit for feeding rods and dropping finished parts. Holding power is 18 times the air-line pressure.

Heavy duty air-operated collet fixture kit includes the heavy duty air-operated fixture described above, a four-way foot-operated air valve, and three air hoses. **Also Available:** Replacement parts. Please ask for 3198A5 and specify part needed.

Dia.	Ht.	Max. Air Pressure, psi		Each
8 1/4″	5″	120	3198A42	$430.90
Heavy Duty Air-Operated Collet Fixture Kit			3198A41 Each	$559.69

Manual Collet Fixture

A spring-loaded handle allows you to easily operate this fixture from any position. It is made of cast iron and has four 11/16″ slots for mounting vertically or horizontally. Maximum collet size is 1 1/16″.

Ht.	Wd.	Dp.		Each
4″	5″	3 3/4″	3174A42	$208.26

Dead Centers

Avoid the wobbling points of live centers by using dead centers in high-speed turning applications where friction is not a concern. They have a 60° included angle and are ground for accuracy to ±0.00005″ total indicator readout (T.I.R.) between the shank and the point. All are made of hardened steel.

Carbide-tipped dead centers have great wear resistance that makes them the preferred choice for high-volume, fast-turning operations.

Morse Taper■	Point Dia. (A)	Taper Lg. (B)	O'all Lg. (C)	*Steel*	Each	*Carbide Tipped*	Each

■ See page 2427 for Morse Taper dimensions.

Pipe and Tubing Centers

Also known as bull-nose centers, these centers have a wide head to hold pipe and large-diameter tubing. They are free-running and consist of snug-fitting heads on solid steel arbors.

Small Head— The head is 1″ dia. at the tip and 3 1/2″ dia. at the base. Made of hardened steel.

Large Head— The head is 3 1/4″ dia. at the tip and 6 1/2″ dia. at the base. Made of steel.

■ See page 2427 for Morse Taper dimensions. ♠ Point Lg. (A) is 2 1/2″.

Live Centers

CNC Point

With bearings to support their free-turning point, live centers are exceptionally accurate and produce minimal friction between the center and your work. For increased tool life, the bearings are lubricated and sealed to protect them from fluids and chips. All centers have heat-treated steel points with a 60° included angle and are ground for accuracy to ±0.00005″ total indicator readout (T.I.R.) between the shank and the point, unless noted.

Max. rpm is 6,000 for Morse Tapers 1 and 2, except 3280A61 and A62 are 5,000; 5,000 for Morse Taper 3; 4,500 for Morse Taper 4, except 3229A14 is 4,000; and 3,500 for Morse Taper 5, except 3280A65 is 4,500.

Economy Live Centers— A good choice for intermittent use on manual lathes. T.I.R. is ±0.00002″.

Light to Medium Duty Live Centers— For light to moderate loads on manual lathes. Body and point are hardened for extra strength and wear resistance.

Medium to Heavy Duty Live Centers— Designed for continuous use, these centers have a high load capacity for turning heavier parts. The body and point are hardened for extra strength and wear resistance. The point extends into the shank for increased rigidity and reduced point deflection and vibration. They are a perfect choice for manual and CNC lathes.

CNC Point Medium to Heavy Duty Live Centers— Similar to the medium to heavy duty live centers, except these have an extended point for additional tool clearance. They are often required on CNC lathes.

Expanding-End Mandrels

Also known as arbors, these mandrels have an expanding end for holding and supporting the inside diameter of your workpiece. All are made of carbon steel for easy machining. Use with milling machines, lathes, grinders, chucks, collets, and fixtures.

To use, tighten the expansion screw so the mandrel expands 0.002″. Then machine the mandrel, loosen the expansion screw, position the part on the mandrel, and retighten the screw.

Body Dia.	Shank Dia.	O'all Lg.		Each

2″	1″	4″	2779A27	62.74
2 1/2″	1″	4″	2779A28	112.93

8-Piece Mandrel Set— Includes mandrels in sizes listed above from 1/4″ to 1 1/4″, four hex-key wrenches, and a wood stand.

2779A19 ..... **Per Set** $121.67

Solid Mandrels

Also known as arbors, solid mandrels are used for machining the outside diameter of a workpiece concentric with a drilled or bored hole. They are made of hardened, ground steel, are tapered, and have flat ends. To use, insert the larger end into the hole of the workpiece and press until tight (an arbor press is usually used to do this). The mandrel then supports the workpiece while it's being turned between centers on a lathe. Taper is 0.0005″ per inch over entire body. Mandrels 1″ dia. and smaller are 0.0005″ undersized on the tapered end; those 1⅛″ dia. and larger are 0.001″ undersized on the tapered end. Sizes are stamped on the larger end.

Expanding-Sleeve Mandrels

Also known as arbors, these mandrels have an expanding sleeve to hold a range of diameters, giving them more versatility than solid mandrels that hold only a single size. The expanding sleeve also allows them to hold the workpiece closer to its middle for additional support while turning between centers on a lathe.

Each mandrel consists of a hardened, precision-ground steel tapered body and an expanding sleeve that combine for an accuracy of 0.001″ or better. The sleeve mounts on the body, provides a large bearing surface with a positive grip, and prevents vibration.

To use, insert the sleeve into the workpiece. Then insert the small end of the body into the sleeve and push until it's tight. Workpieces can be held in any position on the sleeve and may overhang either or both ends for facing operations.

Standard duty mandrels are recommended for toolrooms and light production work. One expanding sleeve is included. ***Heavy duty*** mandrels are recommended for production line operations and heavy roughing cuts. Mandrels include two expanding sleeves.

Also Available: Replacement sleeves for standard duty mandrels only. Please ask for 3276A71 and specify mandrel OD range.

13″×40″ Geared Head Lathe

With eight spindle speeds ranging from 70 to 2,000 rpm and a quick-change gearbox, this precision metalworking bench-model lathe can handle a variety of turning, facing, boring, and inch/metric threading operations.

Lathe operates on 230 VAC single-phase and has a 2-hp motor. It has a hardened and precision-ground V-way bed design; D1-4 cam-lock spindle supported by precision-tapered roller bearings; removable gap bed section for larger diameter work; full-length chip pan; splash guard; reversing switch; threading dial; steady and follow rest; enclosed oil bath system gearbox; and gears for inch and metric threading.

Lathe also includes 6″ three-jaw universal direct mount chuck with top reversing jaws; 8″ four-jaw independent direct-mount chuck; spindle taper reducing sleeves No. MT-5 to No. MT-3; two No. MT-3 dead centers; four-way tool post; service tools; and instruction manual.

- Swing over bed: 13″
- Swing over cross slide: 7 25/32″
- Swing through gap: 18 3/4″
- Distance between centers: 40″
- Max. cutting tool size: 5/8″×5/8″
- Hole through spindle: 1 3/8″
- Spindle nose taper: No. MT-5 with No. MT-3 sleeve
- Tailstock taper: No. MT-3
- Number of inch threads (range): 40 (4 to 112 teeth/inch)
- Number of metric threads (range): 27 (0.2 to 6 mm)
- Overall size: 71″ Lg.×32″ Wd.×25 1/2″ Ht.
- Weight: 1,015 lbs.

Lathe Guards

Lathe Chuck Guards

The 3/16″ thick clear polycarbonate window on these guards prevents you from getting snagged by the lathe chuck yet offers you an unobstructed view of the workpiece. These guards easily lift and can be locked in the swing-away or down position. The back is reinforced with a plated wire-form housing.

Complete guards include a side-mount base bracket with mounting hardware.

Optional headstock mounting bracket (Style 1) allows mounting on the top or back of lathe headstock.

Optional headstock extension mounting bracket (Style 2) is the same as Style 1, but has an extension tube.

Cutting-Point Lathe Guards

Protect yourself from flying chips and coolant splash by covering the spot where your tools cut the workpiece. These guards have a heavy gauge steel frame and a 3/16″ thick clear polycarbonate window that provides you with a clear view of the lathe. The front panel is hinged above the window and lifts for quick access. Guards mount and travel on the cross slides and are fully adjustable in all directions. Adjustable arm (F) swivels and mounting bracket (G) adjusts vertically. Both lock for easy positioning.

Cutting-Point Lathe Guards

Max. Chuck Dia.	Panel Size, Lg.×Wd.	Window Size, Ht.×Wd.		Each

28″	14 1/2″×14″	10 3/4″×9 3/4″	32635A32	292.17

Ridgid Pipe-Threading Machines

Quickly cut and thread pipe up to 2″ and bolts up to 1″. Use threading fluid on page 2179 with all machines. All operate on 115 VAC and include the following: a safety foot switch; machine-mounted forward/off/reverse switch; quick-opening die head; pipe reamer; pipe/rod/bolt cutter; cutter wheel for steel and ductile iron; and right-hand, NPT dies for threading pipe sizes ½″, ¾″, 1″, 1¼″, 1½″, and 2″.

Ridgid 300 Complete Pipe-Threading Machine

With Tripod Stand (Included)

Ridgid 300 Complete pipe-threading machine is a simple setup for threading pipe and a great alternative to manual threaders. It has a ½-hp, 25-60 Hz, single-speed (38 rpm, no load) motor; manual chuck; alloy steel dies; a manual oiler; cutter for ⅛″ to 2″ pipe or ¼″ to 1″ bolt; tripod stand; and 15-ft. long power cord with three-prong plug.

Ridgid 535 Pipe-Threading Machine

With Tray Stand (Optional)

Ridgid 535 pipe-threading machine takes the 300 Complete a step further with a self-lubricating die head. This machine has a ½-hp, 25-60 Hz, single-speed (36 rpm, no load) motor; manual chuck; alloy steel dies; a cutter with length guide for ⅛″ to 2″ pipe or ¼″ to 1″ bolt; and 17-ft. long power cord with three-prong plug.

Ridgid 535A Pipe-Threading Machine

With Cabinet Stand (Optional)

Ridgid 535A pipe-threading machine has all the convenience of the 535 with added power for faster threading and higher volume. It has a premium 2-hp, 60 Hz, three-speed (16, 46, and 58 rpm, no load) motor; an automatic chuck; and high-speed steel dies. Like the 535, it also has a self-lubricating die head, cutter with length guide for ⅛″ to 2″ pipe or ¼″ to 1″ bolt, and 17-ft. long power cord with three-prong plug.

Dies for Ridgid Pipe-Threading Machines

Made to fit Ridgid pipe-threading machine die heads for threading a variety of pipe and bolt sizes. For use with Ridgid 811A die head above as well as 504A, 711, 815A, 816, and 817 die heads, except 2660A18 and 2660A19, which are for use with Ridgid 714 die head only. All are right hand and include four dies per set. ***High-speed steel*** dies outlast ***alloy steel*** dies.

Ridgid Portable Electric Pipe Threader

Carry this pipe threader to the site for convenient threading. Use with Ridgid 12-R die heads (not included) for 1/8″ to 2″ pipe. Threader runs on 115 VAC, 50/60 Hz, and 1/2 hp. It has a cast aluminum body, a reversible, single-speed (30 rpm, no-load) motor; and an 8 1/2-ft. long power cord with three-prong plug. Overall length is 28 1/4″. CSA certified. Use the Optional Geared Pipe Threader with the Square Drive Adapter to thread 2 1/2″ to 4″ pipe. Use the Die Head Adapters with 00-R die heads to thread 1/8″ to 1″ pipe, and with 11-R die heads to thread 1/8″ to 1 1/4″ pipe.

Ridgid Manual Pipe Threaders

Complete threader sets include everything you need to manually thread pipe—ratchet and handle; die heads; and right-hand, alloy steel NPT dies. Slide in the die heads from either side of the ratchet head, lock in place, and remove by pulling the ratchet knob. The arrow on the ratchet knob indicates forward and reverse direction.

Exposed-style threaders have a ratchet that accommodates a round-bottom die head.

Enclosed-style threaders have a ratchet that accommodates a squared-bottom die head, and they keep chips out for smoother operation.

Exposed Style Die Head

Enclosed Style Die Head

Die

Manual Roll-Grooving Tool

Use this tool when your piping system requires grooved-end rather than threaded pipe. A compact design lets you groove when there's only 3½″ of clearance area around the pipe and only 2¾″ of exposed pipe.

For use on 2″ to 6″ Schedule 10 pipe and 2″ to 3½″ Schedule 40 pipe. Has a cast-in carrying handle and a ratchet with a 90° bend in the handle.

8342A11 ..... $991.50

Pipe-Threading Square Dies

For use in square-die pipe threaders, these dies have wide throats and extra-fine threads that pull the die onto pipe even if it has a large burr. Dies have two cutting edges and two guiding edges for easier threading. Use on steel and stainless steel pipe. Dies are right-hand NPT and are made of tool steel.

To Order: Please specify pipe size from those listed.

Dies Available for Pipe Sizes	Square Size		
⅛″, ¼″, ⅜″, ½″, ¾″, 1″	2″ × 2″	2580A2	$48.41
⅛″, ¼″, ⅜″, ½″, ¾″, 1″, 1¼″	2½″ × 2½″	2580A3	47.18
½″, ¾″, 1″, 1¼″, 1½″, 2″	4″ × 4″	2580A4	64.19

Self-Reversing Tapping Attachments and Collets

Also known as tapping heads, these attachments make a smooth transition from forward to reverse for precision tapping on manually operated drill presses and milling machines. They also reverse at fast speeds for increased productivity. Choose ***Procunier for Straight and Morse Taper Shanks*** or ***Jacobs Taper Shank*** depending on the shank/mount style of your machine.

Procunier Tapping Attachments for Straight and Morse Taper Shanks

A friction clutch provides smooth, cushioned action. Choose from straight shank and Morse Taper mount styles. All come with two wrenches. Collets are sold separately below.

To Order: Please specify shank/mount style from those listed below.

Also Available: Replacement parts: clutch assembly, clutch spring, stud nut, collet nut, and wrenches. Please ask for 2532A61 and specify Procunier number and replacement part needed.

● Collets will also accept metric taps. ♣ One collet fits tap sizes 0-6.

Tapping Attachments for Jacobs Taper Shanks

These attachments align the tap for precise threading and have a torque-control clutch that stops the tap when it bottoms to prevent breakage. They also have a cushioned drive that eliminates cross threading and allows the tap to pick up the lead of a previously tapped thread. For use on mild steel. Collets are sold separately below.

▲ Max. rpm may be lower depending on tap size and workpiece material. Each attachment includes a chart.

Collets for Jacobs Taper Shank Tapping Attachments

These flexible-rubber collets provide a uniform grip more powerful than split-steel collets. Made of synthetic rubber bonded to hardened steel jaw inserts, these are resistant to heat, coolants, and cutting compounds.

Jacobs Tap Chucks and Collets

Tap Chuck

Tap Chucks—One turn of the screw disengages the back jaws and lets you remove and replace taps. Pair one of these chucks with a collet (sold separately) to handle a wide range of tap sizes.

Tap Chucks

For taps, see pages 2536-2553.

Tapping Adapter for Portable Drills

Attach to your portable drill for fast and convenient tapping of most materials. Clutch instantly reverses the tap without stopping the drill's motor. Not for use in drill presses.

A 1/4″ shank chuck adapter (included) allows you to use the tapping attachment without removing your drill chuck. If chuck is removed, attachment fits drills with a 1/2″-20 spindle thread, or it can be used with a 3/8″-24 thread with a spindle adapter (sold separately). Use with tap sizes 6 to 5/16″. Spiral-point taps are recommended.

Furnished with collets for tap sizes 6, 8, and 10, a wrench pin, 1/4″ shank chuck adapter, bushing wrench, and operating instructions.

Also Available: Replacement tap collets and other replacement parts. Please ask for 2559A61 and specify part required.

Manual Tap Drivers

Standard Tap Driver

Also known as hand tappers, these lightweight tools create straight tapped holes and can be attached to your work surfaces. They come with a tap guide, work table, spindle wrench, and steel tap adapters as listed. Spiral-point taps are recommended.

Also Available: Replacement tap adapters. Please ask for 2704A91 and specify driver model and tap size.

Mini Tap Driver—Includes seven adapters; two for tap sizes 0 to 6 and one adapter for each of the following tap sizes: 8, 10, 12, 1/4″, and 5/16″. Also for use with metric tap sizes 1.6, 1.8, 2, 2.2, 2.5, 3, 3.15, 3.5, 4, 4.5, 5, 6, 6.3, 7, and 8 mm.

Standard Tap Driver—Has a removable spindle wrench for lathe use with a dead center. Includes nine adapters; one for each of the following tap sizes: 8, 10, 1/4″, 5/16″, 3/8″, 7/16″, 1/2″, 5/8″, and 3/4″. Also for use with metric tap sizes 4, 4.5, 5, 6, 6.3, 7, 8, 10, 12, 12.5, and 16 mm.

Power Tap Driver

A variable-speed drive allows you to control tapping speed in both forward and reverse. Driver begins to rotate counterclockwise in order to allow proper alignment of the tap. Once engaged, the tool moves clockwise. For use in through holes in steel; accepts up to 3/8″ right-hand taps. It is double insulated, 11 1/2″ long, and has a 120 VAC, 50-60 Hz, 4 amp, automatic-reverse drive with forward no-load speeds of 0-1,200 rpm and reverse no-load speeds of 0-580 rpm. Includes a chuck key and an 8-ft. long power cord with two-prong plug. Meets OSHA requirements.

8304A61 ..... $1,027.20

Tap Wrenches

Gain flexibility in tight, hard-to-reach spaces and manually tap drilled holes with ease.

T-handle wrenches are for general purpose use.

Machine mount with guide wrenches allow you to manually thread drilled holes without moving your workpiece from your machine. Just slide the wrench right into your drill press or lathe chuck using the attachable guide.

Straight handle wrenches provide more leverage and can be used with larger diameter taps. They can also be used with reamers, screw extractors, and other hand tools that have a square on the tool shank.

Handle styles are either one or a combination of the following:

Sliding—Handle moves from side to side for accessing tight spaces.

Ratcheting—Adjust for right- or left-hand ratchet action or lock in fixed position.

Fixed—Great for general tapping in open areas.

Long—Have a long shank for hard-to-reach tapping jobs.

Solid—Handles are solid steel. One handle is rigid and one handle adjusts the hardened and tempered steel jaws.

Tubular—Handles are tubular steel and are removable for easy storage. One handle is rigid and the other handle adjusts the hardened and tempered tool steel jaws.

Ratcheting Wrench Set for Taps and Dies

Switch from internal to external threading using interchangeable tap and die adapters.

Set includes ratcheting wrench with attachable sliding T-handle; small tap adapter for tap sizes 0 to 1/4″; medium tap adapter for tap sizes 5/16″ to 1/2″; and die adapter for 1″ (width across flats) hex dies.

8340A21 ..... **Set** $72.79

Chip Retrievers for Tapped Holes

Simply insert the chip retriever into the tapped hole and pull it out, removing embedded chips quickly and safely. Handle is anodized aluminum. *3-piece set* is furnished in a wood case.

For #10 to 3/4″ Holes	2681A11	**Each**	$16.00
3-Piece Set (For #5 to 1 1/2″ Holes)	2681A21	**Set**	$52.00

Tap Aligner/Holder

Square up your tap with your work surface and keep it straight to prevent tool breakage. The base of this holder has a 120° V-guide for working on rounded surfaces. Side slots in the base act as a wrench to tighten the sleeve when changing jaws. Tool is made of steel and includes two sets of hardened jaws that hold tap sizes 0 to 1/2″ (1.6 to 12.5 mm).

Tap and Reamer Aligner/Holder	2548A12	$52.02
Replacement Jaws (2 Sets)	2548A42	14.10

Tap Sockets

Use your conventional ratchet wrench with these sockets for your tapping job. They can also be used with other tools such as screw extractors and hand reamers that have a square on the shank. Sockets are made of case-hardened steel.

6-in-1 Hand Tapping Tool

Create and restore threads in six sizes with one tool. Reverse the tool holder in the plastic handle and insert one of the two carbon steel taps, which tap three sizes each. Maximum tapping depth per thread size is 3/8″. Tool taps thread sizes 6-32, 8-32, 10-24, 10-32, 12-24, and 1/4″-20. Overall length is 8 1/2″.

6-in-1 Hand Tapping Tool	2555A7	$22.66
Repl. Tap for 6-32, 8-32, and 10-32 Sizes	2555A71	8.20
Repl. Tap for 10-24, 12-24, and 1/4″-20 Sizes	2555A72	8.20

Extractors for Hand and Spiral Point Taps

Remove broken taps and save threads without drilling or using special tools. Extractors have hardened steel fingers that fit in the flutes of a broken tap so you can remove the tap without damaging the workpiece threads. Their square shank is compatible with standard tap wrenches. Made of tool steel.

Choose 2-, 3-, or 4-finger style extractors based on the number of flutes on your tap.

Also Available: Pipe tap extractors and replacement fingers for sizes 1/8″ to 1/2″. For pipe tap extractors, please ask for 2547A61 and specify tap size. For replacement fingers, please ask for 2547A51 and specify tap size.

Drill Out Tap Removers

Drill your broken tap out of your workpiece in just three steps. Make a starter hole in the broken tap with a larger diameter drill (not included). Then choose the correct size tap remover and drill through the broken tap. Remove remains with a scriber or pick. For machine use only. Removers are solid carbide and work on spiral flute, spiral point, and hand taps.

Seven-piece set includes the four tap removers, a pin vise, two picks, and a plastic case.

About Taps

Tap Styles

Hand Taps— Use for through-hole and blind-hole tapping. Have straight flutes that store chips during hand and machine threading.

Spiral Point Taps— Also known as gun taps, these are typically used in through-hole tapping. Have an angular point that pushes chips ahead of the tap and out of the hole. Also for use in deep blind holes where accumulated chips are beyond the length of the thread being cut.

Spiral Flute Taps— When tapping blind holes, deep holes, and holes with a keyway or gap, the spiral flute pulls chips up and out of the hole. Ideal for tapping soft materials.

Pipe Taps— Have straight or spiral flutes.

Tap Materials

Carbon steel taps are for small jobs where resistance to heat and abrasion are not a priority.

High-speed steel taps last longer than carbon steel taps during high-speed and high-volume tapping.

Cobalt steel taps provide extra heat resistance at high speeds compared to high-speed steel taps.

Vanadium steel taps offer better abrasion resistance than high-speed steel for longer tap life during high-volume tapping.

Carbide taps are for use on highly abrasive materials and require a rigid tool setup; not for hand tapping.

Surface Coatings and Treatments

Surface coatings and treatments improve tap life and workpiece thread finish during high-speed tapping of ferrous metals (such as steel and cast iron) and nonferrous metals (such as copper and aluminum), as well as plastic and graphite.

Uncoated (Bright Finish)— Handles general purpose tapping.

Chrome Plating Treatment— Increases hardness of threads on tap and decreases friction for longer tap life. Color is silver.

Oxide Treatment— Prevents buildup of workpiece material on tap surface, reduces friction, and provides a porous layer to hold lubricants. Color is blue-black.

Nitride Treatment— Improves tap surface toughness for longer tap life. Color is gray.

Oxide-over-Nitride Treatment— Combines benefits of oxide and nitride treatments for extended tap life. Color is blue-black.

TiN (Titanium Nitride) Coating— Provides longer tap life and better workpiece thread finish than uncoated (bright finish) when tapping plastics and ferrous metals. Color is gold.

TiCN (Titanium Carbonitride) Coating— Harder, tougher, and more wear resistant than TiN when used at higher speeds. Color is blue-gray.

Chamfers

The chamfer is the reduced thread height at the front of the tap that guides the tap into the hole. There are three types of chamfers:

Taper Chamfer— Has 7 to 10 chamfered threads. Use for starting threads and in through holes. Requires less torque than other chamfers.

Plug Chamfer— Has 3 to 5 chamfered threads. Use in through holes as well as in blind holes that have sufficient space at the bottom for chips to accumulate.

Bottoming Chamfer— Has 1 to 2 chamfered threads. Variations of the bottoming chamfer include semi-bottoming, which has 2 to 2½ chamfered threads, and modified bottoming, which has 2½ to 4 chamfered threads. Use in blind holes where threads must come as close to the hole's bottom as possible.

Pitch Diameter and Pitch Diameter Limit

Pitch diameter is the distance across the tap from the points where the width of the thread equals the width of the space between the teeth. This is the reference point for determining tolerance (pitch diameter limit).

Pitch diameter limit is the tolerance above pitch diameter. For a looser thread fit or for materials that may shrink, select a higher pitch diameter limit. Pitch diameter limits are shown with the letter H (D for metric taps) followed by a decimal or decimal range in the table below. Most pitch diameter limits provided in this section are for Class 2B thread fit.

H1/D1	+0.0005″	**H7/D7**	+0.0030″ to +0.0035″
H2/D2	+0.0005″ to +0.0010″	**H8/D8**	+0.0035″ to +0.0040″

H6/D6	+0.0025″ to +0.0030″	**H12/D12**	+0.0055″ to +0.0060″

Carbon Steel Hand Taps

When you need a tap for occasional use, these are an economical choice. Taps are uncoated (bright finish) and do not have pitch diameter limits. **To Order:** Please specify taper, plug, or bottoming chamfer. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

For information about taps, see page 2536.

General Purpose High-Speed Steel Hand Taps

Get the job done with these uncoated (bright finish) high-speed steel taps, which are for use on almost any type of metal. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

0.005" Oversize High-Speed Steel Hand Taps

The H11 pitch diameter limit on these taps provides a +0.005" tolerance, leaving enough space in your part's threaded hole for heat treating or plating. Taps are uncoated (bright finish) for use on most metals. All taps have a plug chamfer and four flutes, except sizes 6-32 through 10-32, which have three flutes.

Tap Thread Size	Pitch Dia. Limit	Thread Lg.	O'all Lg.	Drill Size ♦

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Metric High-Speed Steel Hand Taps

Metric-sized and uncoated (bright finish), these taps are for general purpose use on most metals. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three is recommended when tapping to the bottom of a blind hole).

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

High-Speed Steel Hand Taps for Deep Threading

Fewer flutes give chips extra space to accumulate when tapping holes with depths more than 1½ times the tap diameter. ***Uncoated (bright finish)*** taps are for use on most metals. ***TiN (titanium nitride) coated*** taps have improved tap life and workpiece thread finish compared to uncoated (bright finish) taps when used on plastic and ferrous metals such as steel and stainless steel.

Special Thread Size High-Speed Steel Hand Taps

Find unusual tap thread sizes here. Taps are uncoated (bright finish) for use on most metals. **To Order:** Specify taper, plug, or bottoming chamfer. Tap thread sizes 15/16"-20 and 1 1/4"-18 are not available with taper chamfer.

Also Available: Additional sizes from No. 0 to 4". Please ask for 2595A999 and specify tap thread size (diameter and threads per inch); pitch diameter limit; and taper, plug, or bottoming chamfer.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Left-Hand Thread High-Speed Steel Hand Taps

Tap left-hand threads on most metals with these uncoated (bright finish) taps. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

Also Available: Special thread taps. Please ask for 2584A4 and specify tap thread size (diameter and threads per inch) and chamfer (taper, plug, bottoming, or a set of all three).

Eight- and Twelve-Pitch High-Speed Steel Hand Taps

Also known as constant pitch taps, these have the same number of teeth (eight or twelve) per inch throughout each series (long and short) and are often used for oil field and power generation applications. They are uncoated (bright finish) for use on most metals. All have six flutes, unless noted.

Eight Pitch (Long Series)

★ Has four flutes.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

High-Speed Steel Hand Taps for Vibration-Resistant Threads

Create threads with a unique profile that resists fastener loosening due to vibration and eliminates the need for self-locking fasteners. Taps are uncoated (bright finish) for use on most metals. All have four flutes and cut threads with a Class 2B thread fit.

Low-Friction Chrome-Plated High-Speed Steel Hand Taps

Chrome plating provides additional tap surface hardness and reduces friction for longer tap life on most metals. Plating is approximately 0.0001" thick. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

Oxide-Treated High-Speed Steel Hand Taps for Iron and Steel

An oxide surface treatment prevents buildup of materials, reduces friction, and provides a porous layer to hold lubricants when tapping iron and steel. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

Cobalt Steel Hand Taps for Mold Steel

Ideal for tapping mold steel as well as hardened steel with a Rockwell hardness between C30 and C45, these taps are uncoated (bright finish) and have a plug chamfer. Tap thread sizes 4-40 to 1/4"-28 have three flutes; all others have four flutes.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Wear-Resistant TiN-Coated High-Speed Steel Hand Taps

A coating of TiN (titanium nitride) provides improved tap life and workpiece thread finish compared to uncoated (bright finish) when tapping plastic and ferrous metals such as steel, stainless steel, and cast iron. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Extra-Wear-Resistant TiCN-Coated High-Speed Steel Hand Taps

Harder, tougher, and more wear-resistant than TiN-coated taps, TiCN (titanium carbonitride) coated taps are for use on plastic, graphite, and ferrous metals such as steel, stainless steel, and cast iron. ***Tap sets*** include one each taper, plug, and bottoming tap of the same size (a set of all three taps is recommended when tapping to the bottom of a blind hole).

High-Performance TiN-Coated Cobalt Steel Hand Taps for Steel and Iron

Designed to stand up to steel and iron, these taps last three times longer than TiN-coated high-speed steel taps. Use them on steel up to Rockwell hardness C45, armor plate up to C35, cast iron, brass, bronze, and hard plastics such as epoxy and phenolics. All taps have a plug chamfer and three flutes, unless noted.

★ Has four flutes.

Solid Carbide Taps for Abrasive Materials

Made of micrograin carbide, these taps outlast high-speed steel taps on abrasive materials. Taps are uncoated (bright finish) for use on aluminum, titanium alloys, Inconel, and steel up to Rockwell hardness C45. All have a plug chamfer and four flutes except size 4-40, which has two flutes, and size 6-32, which has three flutes. Taps require a rigid tool setup; not for hand-tapping.

Cobalt Steel Hand Taps for Plastics

Choose from taps for hard (thermoset) and soft (thermoplastic) plastics. Taps are cobalt steel with a nitride coating. All have a plug chamfer and four flutes except size 2-56, which has three flutes.

Taps ***for hard plastic*** can be used on epoxy, melamine, EPDM, and phenolics and have an H4 pitch diameter limit. Taps ***for soft plastic*** can be used on nylon, polyethylene, polypropylene, PVC, and polystyrene and have an H7 pitch diameter limit.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Vanadium Steel Hand Taps for Aluminum

The combination of high-hook teeth and a nitride treatment over vanadium steel provides a smooth and accurate thread finish on aluminum. Tap thread sizes 2-56 and 4-40 are uncoated (bright finish).

General Purpose High-Speed Steel Spiral Point Taps

Offered with various coatings and treatments, these spiral point taps are for general purpose tapping of many materials. All have a plug chamfer. Sizes 0-80 through 5/16"-24 have two flutes; all others have three flutes.

Uncoated (bright finish) taps can be used on most metals.

Oxide treated taps have less friction and buildup of workpiece materials. For use on ferrous metals such as steel and stainless steel.

TiN (titanium nitride) coated taps have improved tap life and workpiece thread finish compared to uncoated (bright finish) taps when used on plastic and ferrous metals such as steel, stainless steel, and cast iron.

TiCN (titanium carbonitride) coated taps are harder and more wear resistant than TiN-coated taps. For use on plastic, graphite, and ferrous metals including steel, stainless steel, and cast iron.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Ultra-Performance Vanadium Steel Spiral Point Taps

Premium high-vanadium steel with various surface treatments and coatings provides outstanding high-speed tapping capability on many materials. All taps have a plug chamfer. Tap thread sizes 2-56 to 4-48 have two flutes; all others have three flutes.

For Materials with Less than C30 Rockwell Hardness— Use these taps on steel and steel alloys, stainless steel (such as Types 316 and 416), malleable iron, hard plastic, and fiberglass.

For Materials with C30-C40 Rockwell Hardness— Use these taps on hardened steel, stainless steel (such as Types 420 and 15-5 PH), mold and tool steels, and nickel alloys (such as Inconel, Waspalloy, and Hastelloy). Taps are made with a blend of vanadium and cobalt steel.

Oxide-treated taps have less friction and buildup of workpiece materials with a porous layer to hold lubricants.

Oxide-over-Nitride treated taps have the same benefits as oxide-treated taps with additional surface toughness for longer tap life.

TiN (titanium nitride) coated taps have improved tap life and workpiece thread finish when run at high speeds.

TiCN (titanium carbonitride) coated taps have the same benefits as TiN-coated taps, but they're harder and more wear resistant.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Vanadium Steel Spiral Point Taps for Aluminum

High-hook cutting threads and nitride-treated vanadium steel are the perfect combination for tapping wrought and die cast aluminum. These taps also can be used on nonferrous metals such as bronze and brass as well as soft plastics such as nylon and polyethylene. All have a plug chamfer.

Super-Performance Cobalt Steel Spiral Point Taps

Abrasion-resistant and long-wearing, these uncoated (bright finish) cobalt steel taps perform better than high-speed steel taps on alloy and tool steels, malleable iron, aluminum, brass, copper, and zinc. All have a plug chamfer.

Cobalt Steel Spiral Point Taps for Stainless Steel

No need to switch taps for different types of stainless steel—these taps work on Types 303, 304, 316, 316L, 416, and 420. A coating of TiN (titanium nitride) extends tap life, improves thread finish, and allows for tapping at higher speeds compared to uncoated (bright finish) taps. All have a plug chamfer and are for Class 2B thread fit.

Cobalt Steel Spiral Point Taps for Titanium

A special spiral point pushes these nitride-treated cobalt steel taps through pure titanium and titanium alloys. Taps can also be used on hardened stainless steels (such as Types 15-5 PH and 420) and abrasion-resistant steel (such as Ferro-TiC and Hardox 500). All have a plug chamfer and are for Class 3B thread fit.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Solid Carbide Spiral Point Taps for Abrasive Materials

Tough enough for the highly abrasive materials that high-speed steel taps can't handle. These uncoated (bright finish) micrograin carbide taps last longer on aluminum, cast iron, titanium alloys, and nickel-based alloys. All taps have a plug chamfer.

General Purpose High-Speed Steel Spiral Flute Taps

Choose from uncoated (bright finish) and TiN-coated high-speed steel for your general tapping needs. All taps have a 52° spiral. ***Uncoated (bright finish)*** taps are for use on most metals, but they're not recommended for cast iron. ***TiN (titanium nitride) coated*** taps can be run at high speeds and have improved tap life and workpiece thread finish compared to uncoated (bright finish) taps when used on plastic and ferrous metals such as steel and stainless steel.

Vanadium Steel Spiral Flute Taps for Stainless Steel

These oxide-treated vanadium steel taps provide abrasion resistance as well as quality thread finish when tapping all types of stainless steel. All taps have a semi-bottoming chamfer and 48° spiral flutes.

Ultra-Performance Vanadium Steel Spiral Flute Taps

No matter which of these taps you choose, you'll get exceptional quality for tapping a variety of materials. All taps have a modified bottoming chamfer. Tap thread sizes 2-56 to 4-48 have two flutes (unless noted); sizes 5-40 to ⅝″-18 and metric sizes have three flutes (unless noted); sizes ¾″-10 to 1″-12 have four flutes.

For Materials with Less than C30 Rockwell Hardness— Use these taps on steel and steel alloys, stainless steel such as Types 316 and 416, and malleable iron. Taps have 45° spiral flutes.

For Materials with C30-C40 Rockwell Hardness— Use these taps on hardened steel, stainless steel such as Types 420 and 15-5 PH, mold and tool steels, and nickel alloys such as Inconel, Waspalloy, and Hastelloy. Taps are made of cobalt and vanadium steel and have 15° spiral flutes.

Oxide-treated taps have less friction and buildup of workpiece materials with a porous layer to hold lubricants. ***Oxide-over-Nitride treated*** taps are the same as oxide-treated with additional surface toughness and longer tap life. ***TiN (titanium nitride) coated*** taps have improved tap life and workpiece thread finish and can be run at high speeds. ***TiCN (titanium carbonitride) coated*** taps are the same as TiN-coated, but they're harder and more wear resistant.

Cobalt Steel Spiral Flute Taps for Titanium

Specially designed for tapping pure titanium and titanium alloys. Also for use on hardened stainless steel such as Types 15-5 PH and 440 and abrasion-resistant steel such as Ferro-TiC and Hardox 500. All taps have a semi-bottoming chamfer, 15° spiral flutes, and are for Class 3B thread fit, which is tighter than the Class 2B thread fit.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Thread-Forming Hand Taps

Also known as cold forming, fluteless, and chipless taps, these form threads under pressure rather than by cutting so no chips are formed. ***Uncoated (bright finish)*** taps are for general purpose use on most metals. ***TiN (titanium nitride) coated*** taps last longer, provide a better thread finish, and can be run faster than uncoated (bright finish) taps when used on plastic and ferrous metals such as steel and stainless steel.

Long-Shank and Nut Hand Taps

Long Shank

Nut

Get into areas regular taps can't reach. Taps are uncoated (bright finish) high-speed steel for use on most metals. All have straight flutes with a plug chamfer.

Long-Shank Taps—Also known as extension taps, these are best when extra reach is needed.

Nut Taps—Store tapped nuts on the long, narrow shank as you finish tapping each one. Taps have a shank diameter that is smaller than the thread diameter, which makes them great for deep-hole tapping.

Thread Mills for Extra-Hard Materials

Cut left- and right-hand internal threads and get 100% threading depth in difficult-to-machine materials such as stainless steel and nickel-based alloys. These thread mills are AlTiN (aluminum titanium nitride) coated solid carbide for improved thread finish and longer life. All are blue-gray in color. Use with CNC machines with helical interpolation capability (simultaneous three-axis movement).

Also Available: Metric thread mill sizes. Please ask for 2659A999 and specify tap thread size (diameter and pitch).

Ultra-Performance Long-Shank Spiral Point Taps

An extra-long shank allows you to tap holes that are difficult to reach. These spiral point taps are made of vanadium steel and are oxide-treated for reduced friction and improved tap life. Use them on steel and steel alloys, stainless steel, and malleable iron with a Rockwell hardness less than C30. All have a plug chamfer. Taps with thread sizes 7/16″-14 to 1/2″-20 have a shank diameter smaller than the thread diameter for deep-hole tapping.

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Tapered Thread Pipe Taps

Offered in various types of steel and styles for tapping different pipe materials. ***NPT*** taps create threads that require a sealer (sold separately on page 3415) for a pressure-tight joint. ***NPTF (Dryseal)*** taps create threads that are less likely than NPT to leak when a sealer is not used.

High-Speed Steel

All taps are high-speed steel and have straight flutes. ***Uncoated (bright finish)*** taps can be used on most metals. ***Chrome-plated*** taps are harder and have a longer tap life than uncoated (bright finish) taps. For use on most metals. ***TiN (titanium nitride) coated*** taps have improved tap life and workpiece thread finish when used on plastic and ferrous metals such as steel, stainless steel, and cast iron. ***Left-hand*** taps create left-hand threads and are for use on most metals. ***Interrupted thread*** taps have extra space between cutting teeth for better chip storage while tapping most metals. Taps with ***high hook*** teeth are best on materials that produce long and continuous chips such as aluminum, magnesium, and Types 303 and 416 stainless steel.

Cobalt Steel and Vanadium Steel

Cobalt steel taps are uncoated (bright finish) with straight flutes and are ideal for tapping mold steel and hardened steel with a Rockwell hardness between C30 and C45. ***Vanadium steel*** taps have spiral flutes (unless noted) and better abrasion resistance than high-speed steel taps. *Oxide-treated* taps have less friction and buildup of workpiece materials. For use on ferrous metals such as steel and stainless steel. *TiN-coated* taps have improved tap life and workpiece thread finish when used on plastic and ferrous metals such as steel and stainless steel.

6-Piece Sets—Carbon Steel and High Speed Steel

Contain one each of NPT pipe tap sizes 1/8", 1/4", 3/8", 1/2", 3/4", and 1". 2765A42 and 2765A43 are furnished in a plastic pouch; 2765A44 is furnished in a wood case. ***High-speed steel*** taps last longer than ***carbon steel*** taps. ***Ground-thread*** taps have a more precise tolerance than ***cut-thread.***

		Set
Carbon-Steel Cut-Thread Set	2765A42	$114.72
High-Speed Steel Cut-Thread Set	2765A43	202.10
High-Speed Steel Ground-Thread Set	2765A44	284.23

For information about taps, see page 2536.

NPTF Pipe Taps for Shallow Holes

Also known as short projection taps, these are used where tapping depth is limited. Shorter projection and fewer chamfered threads eliminate the need to grind down taps and allow you to tap full threads close to the bottom of the hole. All taps are high-speed steel, have straight flutes, and create NPTF (Dryseal) threads, which are less likely to leak than NPT threads when a sealer is not being used.

Uncoated (bright finish) taps are for use on most metals. ***TiN (titanium nitride) coated*** taps have improved thread finish and longer tap life than uncoated (bright finish) taps when used on plastic and ferrous metals such as steel, stainless steel, and cast iron.

Straight Thread Pipe Taps

Ideal for tapping holes that will be used in low pressure applications. All are uncoated (bright finish) high-speed steel for use on most metals and have straight flutes. ***NPS (American Standard Straight Pipe Thread)*** taps create threaded holes that assemble with taper threaded pipe for a pressure-tight joint (a sealer must be used). ***NPSF (Dryseal American Standard Straight Pipe Thread)*** taps are for tapping holes that connect fuel and oil lines (a sealer is not required).

British Standard Thread Pipe Taps

BSPT (British Standard Pipe Taper) taps are the European equivalent of NPT taper pipe taps. ***BSPP (British Standard Pipe Parallel)*** taps are the equivalent of NPS straight pipe taps. BSPT and BSPP threads should not be substituted for NPT or NPS threads. All taps have straight flutes and are uncoated (bright finish) high-speed steel for use on most metals.

To Order: Please specify BSPT or BSPP thread.

Garden Hose, Spark Plug, and NGO Hand Taps

Specially made for tapping the unique thread sizes of garden hoses, spark plugs, and NGO (National Gas Outlet) connections. These taps are made of uncoated (bright finish) high-speed steel for use on most metals. All have a bottoming chamfer and four flutes, except the garden hose tap, which has six flutes. NGO tap thread size 0.830″-14 is for carbon dioxide and tap thread size 0.965″-14 is for nitrogen.

Conduit Thread Hand Taps

Designed to match European (PG) thread standards for conduit, these taps are made of uncoated (bright finish) high-speed steel for use on metals with a Rockwell hardness up to C32. They have a plug chamfer and four flutes, unless noted. Tap thread sizes 12.5×1.27 to 22.5×1.41 have a 0.006″ pitch diameter limit; all others have a 0.010″ pitch diameter limit.

Tap Thread Size, mm	Thread Lg.	O'all Lg.	Drill Size ♦		
12.5×1.27 (PG7)	1 21/32″	3 3/8″	11.2 mm	2485A11	$49.77
15.2×1.41 (PG9)	1 13/16″	3 13/16″	35/64″	2485A12	68.20
18.6×1.41 (PG11)	2″	4 1/4″	17.25 mm	2485A13	83.60
20.4×1.41 (PG13.5)	2″	4 15/32″	3/4″	2485A14	95.42
22.5×1.41 (PG16)	2 7/32″	4 11/16″	21.25 mm	2485A15	111.37
28.3×1.588 (PG21)	1 1/2″	4″	1 1/16″	2485A16★	133.38
37 ×1.588 (PG29)	1 1/2″	4″	1 13/32″	2485A17★	235.95
47 ×1.588 (PG36)	2″	5″	1 51/64″	2485A18★	349.12

★ Has six flutes.

Micro-Thread Hand Taps

The smallest taps we offer, these uncoated (bright finish) high-speed steel taps cut threads to sizes as small as machine screw size 0000 and metric size 0.50 mm. All taps are for use on most metals and have straight flutes with a plug chamfer. ***Metric sizes*** are for Class D1 and D2 thread fit.

Tap Thread Size	Pitch Dia. Limit	No. of Flutes	Thread Lg.	O'all Lg.	Drill Size ♦		
Machine Screw and Fractional Sizes							
0000-160	H2	2	1/4″	3/4″	#78	2504A11	$86.25

1.20×0.25	—	3	3/8″	1 1/16″	#60	2504A24	49.17

♦ Drill sizes shown are the most commonly used sizes and are suitable for the majority of threading requirements. For other drill sizes and additional information about drill bits, see pages 2428-2429.

For information about taps, see page 2536.

Acme Thread Taps

Straight Flute

Spiral Flute

Combine a roughing cut and a finishing cut in one pass to form acme threads with a Class 2G thread fit. Use for tapping through-holes on most metals. Taps are high-speed steel.

Straight-flute taps are uncoated (bright finish) for general purpose tapping. ***Spiral-flute*** taps have an oxide treatment that prevents buildup of workpiece materials on the tap, reduces friction, and provides a porous layer to hold lubricants.

Also Available: Other sizes. Please ask for 25345A888 and specify style (straight or spiral flute and right- or left-hand thread), tap thread size (tap dia. and threads per inch), material being tapped, and tap depth.

Tap Thread Size	No. of Flutes	Thread Lg.	O'all Lg.	Drill Size ♦	Max. Tapping Depth: Bronze and Steel	Max. Tapping Depth: Brass and Cast Iron	Straight Flute For Right-Hand Threads		SPIRAL FLUTE For Right-Hand Threads		SPIRAL FLUTE For Left-Hand Threads

Combination Taps/Drills

Square-Shank

Hex-Shank

Drill through-holes and cut threads in a single step. Choose a combination tap/drill with a square-shank or one with a hex-shank for use with power screwdrivers and other holders that accept a 1/4" hex shank. All are uncoated (bright finish) for use on most metals, except square-shank cobalt steel tools, which are for use on hard-to-machine metals such as cast iron and hardened steel.

Square-shank high-speed steel tools have a 110° point (except the pipe sizes). ***Square-shank cobalt steel*** tools have a 118° point. ***Hex-shank high-speed steel*** tools have a 1/4" hex shank and a 118° split point. ***NPTF pipe sizes*** have a 118° point.

Taps (including metric)	Machine screw 2 to 12, fractional 1/4″ to 1 1/2″, and metric 2.5 to 30 mm. Has four drawers with 152 compartments (most hold multiples of each tap size). Comes with a lock and two keys.	26″×12″×12 1/2″	**2551A72**.....$407.27
Taps & Drills	Machine screw 6 to 10 and fractional 1/4″ to 1/2″. Has three drawers with 29 compartments (all hold multiples of each tool size).	14 5/8″×7 3/8″×7 3/4″	**25475A71**... $90.00
Pipe Taps	Sizes 1/16″-2″. Has three drawers with 21 compartments (most hold multiples of each tap size).	14 5/8″×7 3/8″×7 3/4″	**2543A51**..... $85.45

60-Piece Hand Tap Set— Includes carbon steel taper, plug, and bottoming chamfer taps in sizes 1/4″ to 1″. Fits cabinet 2543A46.

2688A11 ..... **Set** $344.02

113-Piece Metric Hand Tap Set— Includes 5 each of sizes 3-12 mm and one each of sizes 14-24 mm carbon steel plug chamfer taps. Fits 2543A49.

2688A13 ..... **Set** $347.17

Tap and Drill Stands

Keep taps and drills at hand and organized. Stands are made of high-impact plastic. Tap and drill sizes are clearly marked with embossed characters. Size is 7 3/8″ Lg.×4 11/16″ Wd.×1 11/16″ Ht.

Machine screw/fractional stand has two holes each for tap sizes 2, 3, 4, 5, 6, 8, 10, 12, 1/4″, 5/16″, 3/8″, 7/16″, and 1/2″, plus corresponding tap drill and body drill sizes. Metric stand has two holes each for tap sizes 2, 3, 4, 5, 6, 8, 10, 12, and 14 mm, plus corresponding tap drill and body drill sizes.

Machine Screw/Fractional Stand..... **2972A11** $10.60
Metric Stand **2972A41** 14.02

Machine Screw and Fractional Tap and Die Sets

With a wide range of popular machine screw and fractional sizes in carbon steel, high-speed steel, or both, our tap and die sets meet all your threading needs. All sets include one hand tap and one die of each size marked. All are furnished in a compartmented case.

Carbon steel sets are for occasional use. They include plug chamfer hand taps and hex-shaped dies.

High-speed steel sets last longer than carbon steel taps and dies. They include plug chamfer hand taps and hex-shaped dies.

High-speed steel and carbon steel sets have high-speed steel, plug chamfer hand taps and round, adjustable, carbon steel dies.

25325A14 ..... **Set** $111.30

Metric Tap and Die Sets

52-Piece Set

Choose from different combinations of metric tap and die sizes for internal and external threading. Furnished in a compartmented case.

Carbon steel sets include one plug chamfer hand tap and one hex die of each size marked.

High-speed steel outlasts carbon steel. Set includes three hand taps (one each taper, plug, and bottoming chamfer) and one nonadjustable round die of each size marked.

Thread Repair Tap and Die Sets for Taper Pipe

Maintain secure pipe connections by repairing burred and worn threads on your pipe.

These 12-piece sets contain one tap and one hex die in each of the following NPT pipe sizes: 1/8″-27, 1/4″-18, 3/8″-18, 1/2″-14, 3/4″-14, and 1″-11 1/2.

Sets come in a compartmented case. Dies can be used with most conventional wrenches. ***High-speed steel*** taps outlast ***carbon steel*** taps.

		Set
Carbon Steel Taps and Dies	2549A76	$206.17
High-Speed Steel Taps and Carbon Steel Dies	2549A78	333.77

Compact External Thread Repair Tools

Clamp these tools onto threaded rod from the side—great for repairing threads in tight areas and where rod ends are not exposed. Blades adjust to any pitch and can be used on right- and left-hand threads (inch and metric). Tools are furnished with two high-speed steel blades.

Replacement blades are furnished in sets of two.

OD Range	Tools	Each	Repl. Blades	Set
5/32″-11/16″; 4-18 mm	2607A21	$54.10	2607A31	$15.58
11/16″-1 1/2″; 17-38 mm	2607A22	78.90	2607A32	21.15

Round Adjustable Threading Dies

Create external threads on bolts, studs, rods, and pipe—an adjusting screw allows you to open and close the die to produce most standard classes of thread fit. ***High-speed steel*** dies last longer than ***carbon steel*** dies.

Die sets are furnished in a compartmented case.

TiN-Coated Round Adjustable Threading Dies

A TiN (titanium nitride) coating over high-speed steel provides longer life and improved strength compared to uncoated high-speed steel and carbon steel dies. An adjusting screw opens and closes the die to produce most standard classes of thread fit.

BSPT and BSPP Round Adjustable Threading Dies

Create BSPT (British Standard Pipe Taper) and BSPP (British Standard Pipe Parallel) threads, which are the European equivalents of NPT taper and NPS straight pipe threads, respectively. BSPT and BSPP threads should not be substituted for NPT and NPS threads. Dies are high-speed steel and have an adjusting screw that opens and closes the die to produce most standard classes of thread fit.

Two-Piece Adjustable Threading Dies

Shown Assembled

Two-Piece Dies— A two-piece design allows a wider range of thread-fit adjustment compared to round adjustable dies. Ideal for threading as well as thread repair. Dies are carbon steel and have chamfered threads on both sides: one side has 2 to 3 chamfered threads for regular threading, while the other side has 1 to 1½ chamfered threads for threading close to a shoulder. For use with the die collets and wrenches sold separately below.

Die Collets— Each collet consists of a cap and guide. Screws in the cap open and close the dies for a wide range of thread-fit adjustment while the guide holds them in place.

Wrenches— An adjusting screw secures the die collet. All have a cast steel holder and solid steel handles.

Also Available: Dies for left-hand threads in 7/16″, 5/8″, and 3/4″ sizes. Please ask for 2579A71 and specify thread size and the OD of your collet.

Wrenches for Round Dies

Also known as die stocks, these wrenches have a circular die holder and three adjusting screws to secure round dies. The handles are solid steel. ***Economy*** wrenches have cast zinc die holders. ***Heavy duty*** wrenches have cast steel die holders and a black-oxide surface treatment to prevent rust.

Wrenches for Hex Dies

8325A22, 8325A23, 8325A24

Also known as die stocks, these wrenches are designed to accommodate hex-shaped threading and thread repair dies. Furnished with an adjusting screw to secure the dies. All wrenches except 8325A21 also have an adjustable guide that maintains threading alignment. The die holder is cast zinc; handle material is listed below.

For Die Width Across Flats	O'all Lg.	Handle Material

Thread Repair Hex Dies

Repair damaged and rusty threads without using a die holder. All are hex shaped for use with most conventional wrenches and are made of carbon steel.

Also Available: Additional metric sizes. Please ask for 2573A999 and specify metric thread size and right- or left-hand threads.

Tight-Spot Thread Repair Hex Die Sets

The dies in these sets have a much smaller width across the flats than regular hex dies, making them perfect for rethreading in tight spots. Dies are made of carbon steel and don't require a special holder—most ratchet-style and other conventional wrenches will work.

Also Available: Individual dies. Please ask for 2667A4 and specify thread size and right- or left-hand threads.

Dimensions

BSPT and BSPP Thread Repair Hex Dies

Clean up your British Standard pipe threads. BSPT (British Standard Pipe Taper) threads are the European equivalent of NPT taper threads. BSPP (British Standard Pipe Parallel) threads are the equivalent of NPS straight pipe threads. BSPT and BSPP threads should not be substituted for NPT and NPS threads. Dies are carbon steel and hex shaped for use with most conventional wrenches.

Acme Thread Repair Hex Dies

Specially made to repair the broad, square threads on Acme threaded rods and studs. All dies are for general purpose Acme threads with a Class 2G thread fit (looser than the Class 2C thread fit of precision Acme threads). They are high-speed steel and hex shaped for use with most conventional wrenches.

Bearing-Locknut Thread Repair Hex Dies

Repair threads on bearing-locknut spindles. These dies are also great for cleaning out locking compound that has built up in the threads. All are hex shaped and can be used with most conventional wrenches. ***High-speed steel*** dies outlast ***carbon steel*** dies.

Also Available: Dies for ABMA (American Bearing Manufacturer's Association) locknut Nos. 16 to 30. Please ask for 2619A26 and specify locknut number and carbon or high-speed steel.

ABMA ♦ Locknut No.	Thread Size	Width Across Flats	High-Speed Steel		Carbon Steel

Wrap-Around Thread Repair Die Set

Start thread repair anywhere along the length of a shaft, bolt, or stud—unlike solid hex dies, these don't need to be threaded onto the end of your material. Dies are made of heat-treated tool steel.

This 23-piece set contains one die wrench, one socket for use with a 3/8″ ratchet wrench (not included), and one die in each of the following sizes: 1/4″-20, 1/4″-28, 5/16″-18, 5/16″-24, 3/8″-16, 3/8″-24, 7/16″-14, 7/16″-20, 1/2″-13, 1/2″-20; Metric—6×1, 7×1, 8×1, 8×1.25, 9×1, 9×1.25, 10×1.25, 10×1.5, 11×1.5, 12×1.5, and 12×1.75 mm.

8335A21 ..... **Set** $212.91

Thread Repair File and Die Sets

18-Piece Set

Renew external threads in a wide range of sizes. All files and dies are carbon steel. Dies are hex shaped and have a smaller OD than other dies for use in tight spots with most conventional ratchet wrenches.

No. of Pieces	Sizes Included	Set
15	Files: One for 11, 12, 13, 14, 16, 18, 20, and 24 threads per inch Dies: 1/4″-20, 1/4″-28, 5/16″-18, 5/16″-24, 3/8″-16, 3/8″-24, 7/16″-14, 7/16″-20, 1/2″-13, 1/2″-20, 9/16″-12, 9/16″-18, 5/8″-11, 5/8″-18	2616A19 ..... $35.72
18	Files: Two for 9, 10, 11, 12, 13, 14, 16, 18, 20, 24, 27, 28, and 32 threads per inch Dies: 1/4″-20, 1/4″-28, 5/16″-18, 5/16″-24, 3/8″-16, 3/8″-24, 7/16″-14, 7/16″-20, 1/2″-13, 1/2″-20, 9/16″-12, 9/16″-18, 5/8″-11, 5/8″-18, 3/4″-10, 3/4″-16	2616A21 ..... $45.35
13 (Metric)	Files: One for 0.75, 1, 1.25, 1.5, 1.75, 2, 2.5, and 3 threads per mm Dies: 6×1, 6×1.25, 8×1, 8×1.25, 8×1.5, 10×1, 10×1.25, 10×1.5, 12×1.25, 12×1.5, 14×1.25, 14×1.5 mm	2616A22 ..... $33.48

External Thread Repair Tools

A

B

C

D

There's no need to rethread your whole bolt, rod, or pipe to repair one area of damaged threads. Simply slide one of these tools to the area where threads are damaged, tighten, and rotate until threads are repaired. Each tool has one set of hardened tool steel blades for use on machine screw, fractional, and taper pipe thread sizes from 6 to 28 threads per inch and metric thread sizes from 1 to 4 mm.

	OD Range	Max. Handle Swing★	Length Left Unthreaded■	Thread Restorers	Each	Replacement Blade Sets	Set
A	1/4″-1″	7″	1/2″	2615A11	$95.86	2615A115	$72.31
B	1/4″-1″	3″	1/2″	2615A12	183.42	2615A125	34.60
C	1″-2 9/16″	5 1/4″	5/16″	2615A14	295.65	2615A145	82.87
C	1 3/4″-4″	7″	5/16″	2615A15	369.30	2615A155	82.87
C	4″-6″	8″	5/16″	2615A16	471.16	2615A165	113.76
D	6″-12″	15″	5/16″	2615A17	1,138.84	2615A175	393.31

★ Measured from the center of the tool to the end of the handle with handle adjusted to its maximum limit.
■ The portion of the threads at the beginning of the shaft or bolt that can't be reached by the die blades.

Replaceable Die External Thread Repair Tool

Eliminate the cost of buying new external thread repair tools when the dies are worn—this tool has replaceable dies.

Tool comes with dies for 4, 5, 6, 7, 7 1/2, 8, 9, 10, 11, 11 1/2, 12, 14, 16, 18, 20, and 24 threads per inch. OD range is 1 1/4″ to 5″. A die cast alloy pad firmly holds the tool on the threaded portion without damaging the threads. Overall length in closed position is 9″. Maximum handle swing is 7″. Handle is steel.

2630A12 ..... $120.82

Optional Metric Die Set

For use with the thread repair tool above. Includes three dies for metric thread sizes 1, 1.25, 1.5, 1.75, 2, 2.5, 3, 3.5, and 4 mm.

2630A29 ..... **Set** $39.02

Replacement Dies

For Thread Pitch		Each
Machine Screw and Fractional (threads per inch)		
4, 5	2630A24	$3.69
6, 7	2630A25	3.69
7 1/2, 9	2630A26	3.69
8, 10, 12, 14	2630A21	3.69
11, 11 1/2	2630A23	3.69
16, 18, 20, 24	2630A22	3.69
Metric (threads per mm)		
1, 1.25, 1.5, 1.75	2630A33	12.44

4	2630A35	8.56
Replacement Pad	2630A31	21.18

Replaceable Die Internal Thread Repair Tool

Change the dies when they become worn rather than buying a new internal thread repair tool. This tool has a 3/4″ to 6″ ID capacity. Use on straight and tapered threads. Dies automatically line up with threads at any point and can be removed at any point.

Tool comes with dies for 14 threads per inch for 1/2″ and 3/4″ pipe, 11 1/2 threads per inch for 1″ to 2″ pipe, and 8 threads per inch for 2 1/4″ to 6″ pipe.

2598A11 ..... $18.38

Also Available: Pairs of dies in individual sizes. Please ask for 2598A31 and specify threads per inch.

Die Sets in Additional Sizes

Sets include two dies per size and do not include tool.

12-Size Die Set—Includes one pair of dies for each size: 9, 10, 11, 12, 13, 16, 18, 20, 24, 27, 28, and 32 threads per inch.

2598A12 ..... **Set** $26.05

8-Size Metric Die Set—Includes one pair of dies for each metric thread size: 0.75, 1, 1.25, 1.5, 1.75, 2, 2.5, and 3 mm.

2598A13 ..... **Set** $17.37

Combination Internal and External Thread Repair Files

One file restores internal and external threads on bolts, studs, threaded shafts, pipe, and pipe fittings in many sizes. Not for use on British Standard pipe threads. Files are heat-treated carbon steel. Sizes are marked on each file. Each file is 25/64″ square and 9″ long; furnished in a plastic storage tube.

Thread Type	For Thread Pitch		Each
Machine Screw and Fractional (threads per inch)			
Bolt	9, 10, 12, 16, 20, 27, 28, 32	2542A51	$28.95
Bolt	11, 12, 13, 14, 15, 16, 18, 20, 24	2542A41	28.95
Pipe	8, 10, 11 1/2, 14, 16, 18, 24, 27	2542A52	28.95
Metric (threads per mm)			
Bolt	0.75, 1, 1.25, 1.5, 1.75, 2, 2.5, 3	2542A42	28.95

4-Piece Thread-Restoring File Set—Includes one each of the files above in a plastic pouch.

2542A61 ..... **Set** $116.46

Thread Repair Files

External Thread File

Repair rusted and damaged threads on any diameter bolt, pipe, rod, or shaft. All files are steel. ***External thread files*** are 7/16″ square (unless noted) and 8 3/8″ long. Thread sizes are marked on each file for use as thread gauges. ***Internal thread files*** are 7/16″ square and 10″ long.

Individual Files

Thread Type	For Thread Pitch		Each
External Threads (threads per inch)			
Bolt	11, 12, 13, 14, 16, 18, 20, 24	2616A11	$11.27
Bolt	9, 10, 12, 16, 20, 27, 28, 32	2616A12	11.27
Pipe	8, 10, 11 1/2, 14	2616A14●	33.26
Pipe	8, 10, 11 1/2, 14, 16, 18, 24, 27	2616A15	11.27
Metric External Threads (threads per mm)			
Bolt	0.8, 1, 1.25, 1.5, 1.75, 2, 2.5, 3	8309A11	10.19
Internal Threads (threads per inch)			
Pipe	8, 10	2616A16	17.25
Pipe	8, 11 1/2	2616A17	17.25
Pipe	10, 14	2616A18	17.25

● Size is 1″ Wd. × 1/2″ Thick.

Plastic File Handle—Slips over file for a comfortable grip. Fits all files listed above except 2616A14. Six handles per package.

2616A41 ..... **Pkg.** $6.00

6-Piece File Set—Includes one each of 2616A11, A12, A14, A15, 8309A11, and 2617A12. Also includes four plastic handles and pouch.

2616A31 ..... **Set** $67.95

Universal External Thread Repair File

Renews all machine screw, fractional, and metric thread sizes as well as NPT and NPS pipe thread sizes. Has a cushion-grip plastic handle. File size is 7/8″ Wd. × 1/8″ Thick. Overall length is 9″.

2617A12 ..... $5.51

About Vises

Vises

Bench Vises (pgs. 2563-2564)— Typically mounted to a workbench for general clamping.

Woodworkers' Vises (pg. 2564)— Typically mounted to a workbench, these have large jaws to prevent damage to the workpiece.

Pipe Vises (pg. 2565)— For holding round material such as pipe.

Pin Vises (pg. 2566)— Small, hand-held vises for narrow tools such as scribers and drill bits.

Hand Vises (pg. 2567)— Small, hand-held vises with a handle.

Drill-Press Vises (pgs. 2567-2568)— Mount to a drill press to hold material being drilled, tapped, reamed, or worked vertically.

Vises (Cont.)

Machine Vises (pgs. 2568-2569)— Mount to milling or CNC machines. Use for vertical machining and demanding horizontal applications such as milling, routing, and grinding.

Jaws

Smooth Jaws— Versatile enough to hold different material shapes without creating indentions in soft metals.

Grooved Jaws— Vertical and horizontal grooves hold cylindrical pieces well, either parallel or perpendicular to the vise.

Serrated Jaws— Have a fine cross-hatch pattern to grip work firmly in any position.

Wilton Heavy Duty Bench Vises

Also known as machinists' vises, these bench vises are built for a long life of heavy use. The vise body is made of heavy ductile iron for industrial-grade strength. All moving parts are enclosed to keep contaminants out and keep lubricants in for smooth operation. Vises have replaceable serrated steel jaws, a built-in anvil, and an Acme-threaded main screw. Mounting fasteners not included. ***Replacement serrated jaws*** come with screws for attaching the jaw faces to the vise.

Bench Vises— Choose a stationary base or a locking 360° swivel base. ***Bench Vises with Pipe Jaws—*** In addition to their top jaws, these vises have replaceable steel pipe jaws. They have a locking 360° swivel base.

With Pipe Jaws

For a listing of repair parts for these vises, go to mcmaster.com and search for **5298AAC**.

Heavy Duty Bench Vises

A body made of heavy iron gives these bench vises the strength and durability to withstand heavy use. They're also known as machinists' vises. All have replaceable serrated steel jaws, a precision slide bar, and an Acme-threaded main screw. Mounting fasteners not included. ***Replacement serrated jaws*** come with fasteners for attaching the jaw faces to the vise.

Bench Vises— Choose a stationary base or a locking 360° swivel base. Body is made of cast iron.

Bench Vises with Pipe Jaws— In addition to their top jaws, these vises have replaceable steel pipe jaws. They have a locking 360° swivel base. Body is made of ductile iron, except 5289A2, which has a cast iron body.

With Pipe Jaws

Medium Duty Bench Vises

A great all-purpose choice, these bench vises have a ductile-iron body, replaceable steel top jaws, and replaceable steel pipe jaws. You can flip the faces on the top jaws; they're smooth on one side and serrated on the other side. Furnished with a locking 360° swivel base, a built-in anvil, a precision slide bar, and an Acme-threaded main screw. Mounting fasteners not included.

For information about vises, see page 2563.

Reversible-Jaw Medium Duty Bench Vise

Shown with Jaw in Reversed Position

Use this bench-top vise with its top jaws in their standard position or reverse the jaw on the sliding section to expand the jaw opening more than 3″.

Body is cast iron with built-in pipe jaws. All have replaceable serrated steel top jaws, two anvil surfaces, an Acme-threaded main screw, and a locking 360° swivel base. Base has four 5/8″ dia. holes for bench mounting (fasteners not included).

Jaw Wd.	Max. Opening (reversed)	Throat Dp. (reversed)	Pipe Cap.		Each
5 1/2″	6″ (9 3/4″)	3 3/4″ (2 3/4″)	1/8″-3″	4065A1	$153.55

Light Duty Bench Vises

Intended for less demanding applications than heavy and medium duty bench vises, these vises have a cast iron body and built-in pipe jaws. All have replaceable serrated hardened-steel top jaws, a steel slide bar that covers the Acme-threaded main screw, and a locking 360° swivel base (unless noted). Mounting fasteners not included.

Jaw Wd.	Max. Opening	Throat Dp.	Pipe Cap.	Mounting Holes Dia.	Qty.		Each
4″	4″	2 3/4″	1/8″- 2″	1/2″	4	5310A42	$105.60

6 1/2″	5 1/2″	3 13/16″	1/8″- 2 1/2″	7/16″	4	5310A44★	153.72
8″	8″	4″	3/8″- 3″	1/2″	4	5310A6	275.61

★ Has a locking 180° swivel base.

Weather-Resistant Bench Vises

Go ahead and use these vises outdoors. To prevent rusting, the steel body has a black enamel painted finish and the screws, handles, and locknuts are chrome plated. Vises have built-in pipe jaws, replaceable serrated steel top jaws, a built-in anvil, a steel slide bar that covers the Acme-threaded main screw, and a locking 360° swivel base. Slide bar has a translucent rust-preventative coating. Mounting fasteners not included.

Jaw Wd.	Max. Opening	Throat Dp.	Pipe Cap.	Mounting Holes Dia.	Qty.		Each

6″	6″	3″	1/2″-2″	9/16″	3	5252A3	163.88
8″	8″	3 1/2″	3/4″-2 1/4″	5/8″	3	5252A4	226.88

High-Visibility Bench Vises

A yellow painted finish promotes worker safety and conforms to OSHA safety color standards for physical hazards regulation No. 1910.144. Body is steel. Vises are light duty and have built-in pipe jaws, replaceable serrated steel top jaws, a built-in anvil, a steel slide bar that covers the Acme-threaded main screw, and a locking 360° swivel base. Mounting fasteners not included.

Jaw Wd.	Max. Opening	Throat Dp.	Pipe Cap.	Mounting Holes Dia.	Qty.		Each

Vise Adapter for Round Material

Add this adapter to the top jaws of your vise to firmly hold small-diameter material vertically. It has two different size openings, so you can find the perfect fit for your projects. Just insert your round material into the adapter and tighten the vise. The adapter jaws open automatically when you open the vise. Made of steel with nonreplaceable aluminum jaws.

Fits Diameters Slot 1	Slot 2		Each
5/16″-11/32″	11/32″-13/32″	6325A42	$13.16

Rotating Multijaw Medium Duty Bench Vise

Hold both flat and round stock in almost any position. This vise comes with three sets of replaceable hardened-steel jaws—serrated top jaws, pipe jaws, and V-jaws. The head rotates 360° and locks at 30° intervals. Plus, the swivel base rotates 360° and locks at any position. Body is cast iron and has a built-in anvil. Base has three 7/16″ dia. holes for bench mounting (fasteners not included).

Jaw Wd.	Max. Opening Top Jaw	Pipe Jaw	V-Jaw	Throat Dp.	Pipe Cap. Pipe Jaw	V-Jaw		Each
5 1/8″	4″	3 1/2″	5 1/4″	3 1/2″	3/8″-3″	1″-4 1/2″	5256A1	$201.38

Clamp-On Bench Vises

Medium Duty

Take these portable vises anywhere you have a workbench—a spindle clamp allows mounting on bench tops. All vises have a built-in anvil.

Medium Duty—Heavier in weight than the light duty style to handle more demanding workholding applications, these vises clamp onto bench tops up to 3″ thick. Vises have a cast iron body and replaceable grooved alloy steel jaws. Vise spindle and threads are enclosed to keep out dust and other contaminants. All have a swivel base that rotates 45° to the left and right and locks in position.

Light Duty—For light holding operations. Clamp onto bench tops up to 1 7/8″ thick. Body is cast iron with built-in smooth top jaws and pipe jaws. Base has holes for permanent bench mounting (fasteners not included). 5312A2 has two 3/16″ dia. holes; A3 has two 5/16″ dia. holes and two 1/4″ dia. holes. Vise *with swivel base* rotates 360° and locks in position.

	Jaw Wd.	Max. Opening	Throat Dp.	Pipe Cap.		Each
Medium Duty						
With Swivel Base	2 1/2″	2 1/8″	1 3/4″	———	4985A1	$128.00
With Swivel Base	4″	2 1/4″	2″	———	4985A2	150.00
Light Duty						
Without Swivel Base	3″	2 1/2″	2 5/8″	3/8″-2 3/4″	5312A2	48.02
With Swivel Base	3″	2 1/2″	2 5/8″	3/8″-2 3/4″	5312A3	51.77

Woodworkers' Vises

Each vise has large iron jaw facings that are drilled and tapped with two 1/4″-20 holes to accommodate wood pads. Because the jaws are large, they apply pressure across a large surface area to hold and protect wood pieces.

Vises have a wood handle. Turn the handle to disengage the screw, then slide the jaw into position—it moves quickly and easily. Turn the handle in the opposite direction to engage the screw and nut for clamping. A stop (commonly called a bench dog) in the front jaw holds work in place during planing.

When mounted under a standard 2 1/4″ thick bench top, these vises fit flush with the top. Jaw has two 3/8″ dia. holes for bench mounting (fasteners not included). Vises meet Fed. Spec. GGG-V-445 Type I, Class II.

Jaw Wd.	Jaw Dp.	Max. Opening	Lg.×Ht.		Each
7″	4″	9″	18 1/2″×5 3/4″	5275A3	$178.92
10″	4″	12″	22″ ×6″	5275A4	201.20

Miniature Bench Vises

Clamp-On Base

Hold items 1″ and smaller with these mini vises. All have built-in smooth top jaws. Mounting fasteners not included.

Clamp-On Base—Clamp onto bench tops up to 1 1/8″ thick or permanently bench mount. Body is cast iron. Size is 3 1/8″ Lg.×4 3/8″ Ht.

Stationary Base—Body is cast iron. Size is 3 1/4″ Lg.×1 7/8″ Ht.

Swivel Base—Base rotates 360° and locks in position. Body is drop-forged steel. Size is 3 3/4″ Lg.×2 1/2″ Ht.

Base Type	Jaw Wd.	Max. Opening	Throat Dp.	Mounting Holes Dia.	Qty.		Each
Clamp On	1 1/16″	1″	9/16″	7/32″	2	6015A33	$8.62
Stationary	1 5/32″	1″	11/16″	7/32″	2	6015A57	7.75
Swivel	1 1/4″	1″	11/16″	1/4″	3	6015A74	17.50

For information about vises, see page 2563.

Yoke-Grip Pipe Vises

Turn the handle on these vises for a strong grip. The top and bottom jaws firmly hold pipe, tubing, and conduit for cutting and threading. Jaws are made of hardened steel; they are replaceable.

The hinge-style side opening has a locking latch. You can reverse the yoke to open on the left or on the right. Yoke and base are made of ductile iron. The base has holes for bench mounting (fasteners not included).

Note: Not recommended for plastic pipe.

Chain-Grip Pipe Vises

Just crank the handle to tighten the chain and secure round as well as irregularly shaped material against the base jaws. You can quickly adjust these vises to hold various sizes of pipe, tubing, and conduit.

The crank handle is on the side of the base, away from the chain. Body is cast iron. Base has holes for bench mounting (fasteners not included). Vises with ***neoprene-coated jaws*** grip pipe without marring it.

Pipe Capacity	Mounting Holes Dia.	Mounting Holes Qty.		Each

1/8"- 4"	9/16"	3	5328A12	223.80

Pipe Vises with Tripod Stand

No workbench available? No problem. These vises have a pipe rest and a tripod stand that provide sturdy support for on-the-job cutting and threading of pipe, tubing, and conduit. The tripod has a handle and folds for portability. All except 5340A4 have pipe-bending slots and holes for hanging tools. All except 5340A4 meet Fed. Spec. GGG-00740A.

Yoke-Grip Vise—Has a ductile iron table and double-faced steel lower jaws. Tripod frame is steel.

Chain-Grip Vises—*Chain-grip vise* has a ductile iron table and double-faced, serrated steel jaws. Tripod frame is steel. *Lightweight chain-grip vise* is 20% lighter in weight than the chain-grip vise for easier carrying. It has a cast aluminum table and serrated steel jaws. Tripod frame is tubular steel. *Clean room chain-grip vise* has an anodized aluminum table; double-faced, serrated Type 410 stainless steel jaws with rubber on one side; and a clear polymer slip tube over the chain. Chain is lubricated with food-grade, nonpetroleum-based oil. Tripod frame is steel.

	Pipe Capacity		Each
Yoke-Grip Vise	1/8"-2 1/2"	5340A1	$512.24
Chain-Grip Vise	1/8"-6"	5340A2	447.89
Lightweight Chain-Grip Vise	1/8"-2 1/2"	5340A4	368.56
Clean Room Chain-Grip Vise	1/8"-6"	5340A3	541.89

Any-Angle Spring-Clip Workholder

Twist, rotate, and bend the jointed arms of this workholder in all directions, placing the spring clips in the exact position you need. Each clip opens approximately 3/4" and is attached to a 7" long arm. Clips are made of carbon steel. Overall size is 11" Ht. × 8 1/2" Wd. × 6 1/2" Dp.

5162A76 ..... **Each** $144.85

Any-Angle Miniature Workholders

You can adjust these workholders 360° in every plane, so it's easy to position the vise head to hold small items. Heads provide positive gripping power to hold flat, round, and hexagonal parts. Jaws are aluminum to prevent damage to parts. One jaw has a horizontal V-groove; the other jaw has a horizontal and a vertical V-groove. Body is made of cast aluminum.

Head Style	Jaw Wd.	Jaw Dp.	Max. Opening	O'all Size, Lg. × Wd. × Ht.		Each
Single	1 1/2"	13/32"	11/16"	5 1/2" × 6" × 6 1/2"	52015A66	$113.21
Twin	1 1/2"	13/32"	11/16"	8" × 7" × 7 1/4"	52015A67	152.07

Multiposition Vises and Workholders

A split-ball joint with a locking screw knob allows you to rotate the vise head 360° and tilt it up and down 90°. Just loosen the knob to position the head; tighten the knob to lock the head in place. Vises are made of cast zinc alloy and steel.

A ***Standard Vise Head with Vacuum Base—*** The vacuum base has the added convenience of portability. A simple half turn of the mount lever attaches or releases the rubber suction pad. Use on any smooth nonporous surface. Vise jaws are smooth and made of nylon; they are replaceable. Vacuum base measures 5⅛″ × 4¼″.

B ***Standard Vise Head with Bench Mount Base—*** Vise jaws are smooth and made of nylon; they are replaceable. The base has a 4⁵⁄₁₆″ bolt circle with three lugs and ¼″ dia. holes for bench mounting (fasteners not included).

C ***Wide Opening Vise Head with Weighted Base—*** A wide jaw opening with reversible, replaceable neoprene jaw pads and a 5-lb. weighted base adds versatility to this vise. Base is 7⁵⁄₁₆″ × 6¾″. Jaw pads are ribbed on one side and have V-grooves on the other side.

D ***Extra-Wide Self-Centering Vise Head with Weighted Base—*** Self-centering feature lets you hold heavier objects because the weight is centered over the 5-lb. base. Base is 7⁵⁄₁₆″ × 6¾″. Comes with reversible, replaceable neoprene jaw pads that are ribbed on one side and have V-grooves on the other side.

E ***Circuit Board Vise Head with Tool Tray Base—*** Accommodates PC boards from ⅛″ to 12″ wide and up to ⁵⁄₃₂″ thick. Comes with six-position 8½″ dia. tool tray base, solder holder, and soldering iron holder. Vise jaws are made of die cast zinc and are replaceable; jaws have V-grooves to hold a circuit board.

Optional C-Clamp Base for Styles B, C, and D— Use to convert the bases on Styles B, C, and D to a C-clamp base. C-clamp opens 3⁷⁄₁₆″ and is 9¾″ long.

	Jaw Wd.	Jaw Dp.	Max. Jaw Opening	O'all Size, Lg. × Ht.		Each
A	2½″	½″	2¼″	7½″ × 6⅛″	8464A63	$75.26
B	2½″	½″	2¼″	5¼″ × 6¼″	8464A14	53.75
C	1⅞″	2″	6″	11″ × 7½″	8464A91	105.34
D	1⅞″	2″	9″	11½″ × 7½″	8464A92	118.26
E	⁵⁄₃₂″	6″	12″	14″ × 13½″	8464A48	98.92
Optional C-Clamp Base for Styles B, C, and D					8464A41	54.79

Ball Joint Workholding Bases

Each ball joint rotates 360° and pivots 90° to position work where you want it. Just unlock the lever, rotate and pivot the ball joint into position, and then lock the lever in place. Your work is secure for hands-free production. All of these bases can be bench-mounted (fasteners not included).

F ***Midget Workholder—*** This small workholder has all steel construction. Work mounting stem has a ⁵⁄₁₆″-24 × ¹⁵⁄₃₂″ long threaded stud with nut. Base has three ¼″ dia. mounting holes.

G ***Light Duty Workholder—*** Body is made from cadmium-plated steel; base is cast iron. Work mounting stem has a ½″ ID × ½″ Dp. hole with ⅜″-16 set screw. Base has four ¼″ wide mounting slots.

H ***Standard Duty Workholder—*** Body is made from cast aluminum with steel parts. Base is die cast zinc. Work mounting stem has 3″ dia. pad with two ¼″-20 threaded holes with screws and washers. Base has four ⁹⁄₃₂″ wide mounting slots.

J ***Heavy Duty Workholder—*** Body and base are made from machined cast iron with all steel parts. Work mounting stem has two ⁵⁄₁₆″-18 threaded holes, spaced 1″ center-to-center (includes screws and washers). Base has three ⅜″ dia. mounting holes.

K ***Heavy Duty Hydraulic Workholder—*** The hydraulic system is hand operated and self-contained. Body and base are made from cast iron with all steel parts. Work mounting stem has two ⁵⁄₁₆″-18 threaded holes, spaced 1″ center-to-center (includes screws and washers). Base has three ⅜″ dia. mounting holes.

	Workholding Capacity	Base Dia.	O'all Ht.		Each
F	6 lbs.	2½″	1¼″	5251A2	$146.34
G	20 lbs.	3¾″	4¼″	5251A3	163.64
H	30 lbs.	4¼″	5″	5251A1	204.51
J	70 lbs.	5¹⁵⁄₁₆″	10½″	5250A1	457.91
K	150 lbs.	5⅞″	10½″	5250A2	592.34

Pin Vises

These hand-held vises have collet-style jaws. Use them to hold wires, scriber points, small files, taps, drills, pins, and other small objects.

Single End— Vises have an adjustable threaded collar and spring-tempered steel collets. The body is hollow to accept long wires and rods.

Double End— Each end has an adjustable threaded collar and a reversible steel collet. Body is hollow to accept long wires and rods.

Swivel Cap— Vise has a hexagonal swivel cap that turns independently of the body. Comes with two double-end collets. Collets are steel.

Easy Slide— For one-handed operation. The knurled ring slides forward to close the steel jaws. Body is hollow to accept long wires and rods.

Chuck— Vises have three adjustable steel jaws and a plastic handle.

Comfort Grip— Vises have a cushioned rubber grip and large hexagonal swivel cap for extra comfort. Plus, you can store drills, taps, and collets in the vise body. Collets are steel. Handle is ABS plastic. 7112A1 has a single-end collet; 7112A2 comes with two double-end collets.

Size Range	Dia.	Lg.		Each

4-Piece Single-End Vise Set— Includes one each of the four single-end pin vises listed above. Packed in a plastic pouch.

8455A14 ..... **Each** $61.78

For information about vises, see page 2563.

Wide-Grip Micro Hand Vise

Sized to fit your smallest items, this vise is 1⅞″ Lg. × 1¼″ Wd. × 1″ Ht. The jaw opens from ½″ to 1⅜″ wide—almost the full length of the vise. Ideal for holding flat objects by their edge.

Use the knurled thumb screw to tighten; it applies enough gripping force to hold an item securely without damaging it. Vise has four double-sided surfaces to provide eight gripping edges. Made of plated brass.

5123A16 ..... **Each** $22.50

Hand Vises

Hold these vises in your hand. Styles A-C have a wing nut closure and a spring in the handle to control the holding force and jaw opening. Turn the handle to open and close Style D. Turn the screw to open and close Style E. Vises have all-steel construction, except for Styles A and E, which are steel with a wood handle. *Style C* and *Style D* have a hollow handle for long wires to pass through. Style C handle is knurled for a better grip. *Style E* has eight removable pins that you arrange to hold work in position.

	Jaw Wd.	Throat Dp.	Max. Open.	Jaw Faces	O'all Lg.		Each

Palmgren Drill-Press Vises

The traditional design of these vises makes them the industry favorite for drill press workholding. Vises have a cast iron body and an open base that allows clear-through drilling. All have replaceable steel jaw faces. Made in the U.S.A.

F Smooth-Base Vises—Their rectangular shape allows you to use them sitting on the bottom, on either side, or on end. 5226A5 can be used without jaws to expand the max. opening size.

G Side-Grooved Base Vises—A groove along the base enables you to clamp the vise to a workbench.

H Lug-Base Vises—Have two side lugs for bench mounting. 5272A1 requires ⅜″ bolts (not included); 5272A2 requires 9/16″ bolts (not included).

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.	Palmgren No.		Each

★ Opening size with jaws removed.

Micro-Jaw Hand Vises

Round Jaws Rubber/Brass

Narrow Jaws Stainless Steel

For delicate handling of small and lightweight items, these tiny vises grip firmly without distortion. Just squeeze the body together to open the jaws; release the body to grip. Made of Type 303 stainless steel.

Jaw Material	Max. Jaw Opening	Jaw Dimensions	O'all Size, Lg. × Ht.		Each
Round Jaws—*For round items*

Quick-Lock Drill-Press Vises

Light Duty Slide-Bar Style

Slide-Bar Style and Pump Action Slide-Bar Style

Screw Style

It's easy to tighten and lock the jaws on these vises. The jaw faces have steps to elevate the workpiece for workpiece drill through. All can be bench mounted (fasteners not included).

Light Duty Slide-Bar Style and Slide-Bar Style—Push the center lever to slide the movable jaw to your workpiece. Press the locking lever to exert final holding pressure. Vises have a cast iron body, replaceable smooth steel jaws, and an open base that allows clear-through drilling.

Pump Action Slide-Bar Style—Pump the locking lever to advance the jaws for final holding. The pumping action takes up slack in compressible materials such as wood and plastic. Vises have a cast iron body, replaceable smooth steel jaws, and an open base that allows clear-through drilling.

Screw Style—Lower the threaded rod into the base and turn the handle to advance the jaws for final holding. Jaws are made of hardened alloy steel; one is smooth and the other is grooved. You can reverse the grooved jaw to a smooth ground plate that's useful for holding small parts. Jaws are replaceable. Body is steel.

For information about vises, see page 2563.

Cross-Slide Drill-Press Vises

Cross Slide

Precision Cross Slide

Designed to move work on two axes (X and Y), these vises are perfect for drilling and light milling applications where your work must be accurately positioned. Vises have a cast iron body and replaceable steel jaws; one is smooth, the other is grooved. The feed screws have precision Acme threads. Crank handles are solid steel and counterbalanced. Mounting fasteners not included.

Cross Slide— Dials are graduated in 0.1 mm increments. All have five mounting lugs; 6079A11 requires 1/2″ bolts, A12 and A13 require 5/8″ bolts.

Precision Cross Slide— Jaws are parallel to 0.002″. The dials are graduated in 0.001″ increments; each dial can be adjusted to start at zero. The base has a 5/8″ keyway. Vise has four mounting lugs and requires 1/2″ bolts. You can remove the vise from the base and use it as a traditional drill-press vise.

Machine Vises

A

B Swivel Base

Vises have a cast iron body (unless noted) and replaceable hardened tool steel jaws to handle machining such as milling, drilling, shaping, and grinding. Mounting fasteners not included.

Vises with ***swivel base*** rotate 360°, lock in place, and are graduated in 1° increments. You can remove the vise from its swivel base and use it as a stationary model.

A Heavy Duty— The extra-heavy body provides great strength for production tooling and maintenance. All have a swivel base; smooth jaws; a keyway; a removable crank handle; and a steel pointer for quick, accurate degree setting. Base and bed are parallel to within 0.002″. Jaws are square to within 0.0015″. There are two mounting slots for 5/8″ bolts (3/8″ bolts for 5240A41). 5240A45 has a coolant trough.

B Medium Duty— For general maintenance operations. One jaw is smooth, the other is grooved. Base and bed are parallel to within 0.001″. Jaws are square to within 0.002″. All vises have two bolt slots for mounting. *Stationary base* vises have slots for 1/2″ bolts. *Swivel base* vises have slots for 5/8″ bolts.

★ Body is ductile iron.

Self-Centering Machine Vise

Both jaws move to automatically adjust the workpiece to its center, saving you time when drilling and milling jobs require quick, accurate centering. Base and bed are parallel to within 0.0012″ and jaws are square to within 0.0012″. Body is cast alloy steel. Jaws are steel; they're smooth and replaceable. Vise has a locking 360° swivel base that is graduated in 1° increments. Base has a 1/2″ keyway and two 1/2″×3/4″ mounting slots (fasteners not included).

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.		Each
4″	1 1/2″	4″	10 1/4″	5″	4980A11	$483.33

Light Duty Drill-Press Vises

A good choice for less demanding applications, these vises are made of cast iron and have replaceable steel jaws (one is smooth, the other is grooved). They have center slide-bar construction for accuracy and stability. Four side slots allow mounting to a workbench (fasteners not included).

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.	Mounting Slot Size		Each

Variable-Angle Drill-Press Vises

Swivel Base

Frequent angle changes aren't a problem for these vises. They hold your work at any vertical angle between 0° and 90°. Use for drilling, milling, grinding, and tapping. Vises have a cast iron body and steel jaws; one is smooth, the other is grooved. All have replaceable jaws and two mounting lugs, and require 1/2″ bolts (fasteners not included).

Swivel Base— The vise base rotates 360° and locks in place. Vises are graduated in 5° increments.

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.		Each
Stationary Base						
2 7/16″	1 1/2″	2 1/2″	7 7/8″	3 7/16″	5202A15	$112.04

4″	1 1/8″	4″	12″	6 1/4″	5199A1	211.75

Any-Angle Precision Machine Vises

Three-way angle adjustment on these vises provides maximum flexibility when positioning your work—the most adjustability of any vises we offer. Vises tilt 45° to each side and have 90° vertical indexing that allows the body of the vise to be positioned at a right angle to the work surface. All are made of ductile iron with hardened and precision ground steel jaws that are square to within 0.0012″ for precise holding of flat objects. Jaws are smooth and replaceable. The base swivels 360°, locks in place, and is graduated in 1° increments. Base has a keyway and two mounting slots for 1/4″ bolts (not included).

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.	Keyway Size		Each

6″	1 3/4″	6″	16 15/16″	9 1/2″	1/2″	4159A23	1,143.36

Ultra-Precision Vises

Also known as toolmakers' vises, these vises are built for precision grinding and inspection applications. The base and bed are parallel to within 0.0002″, and the jaws are square to within 0.0002″. Plus, the movable jaw pulls into the base at a 45° to 60° angle, preventing jaw lift. Use a 1/4″ hex wrench to tighten the jaws. The vise body is made of solid, one-piece steel. Jaws are steel; one is smooth, the other is grooved. The movable jaw is replaceable and has built-in horizontal and vertical V-grooves for holding round stock. Vises have holes for bench mounting (fasteners not included). 5218A54 has end pockets for clamping to sine plates (see page 2301 for sine plates).

Jaw Wd.	Jaw Dp.	Max. Open.	Body Lg.	O'all Ht.	*Mounting Holes* Dia.	Qty.		Each
2″	1″	3 1/4″	5 7/8″	2″	5/16″	4	5218A52	$440.96
3″	1 5/16″	4 3/4″	7 1/2″	2 5/8″	5/16″	4	5218A54	546.83

For information about vises, see page 2563.

Kurt Precision Angle-Lock Machine Vises

Achieve precise machining—the angle-lock design of these vises and their precision ground bed surfaces eliminate jaw lift and workpiece deflection. For each pound of force applied by turning the screw and moving the jaw horizontally, there is a half-pound of force pushing the jaw downward and seating it firmly on the vise bed.

Vises have four jaw-plate positions, allowing extra capacity when the jaw faces are in the outside position. The base is cast from 80,000-psi ductile iron; the jaws are hardened steel. The jaws and the top and bottom of the bed have ground surfaces; bed is flat within 0.001″ and parallel within 0.006″. A needle-roller bearing thrust collar reduces friction and increases clamping pressure. Vises have two holes for mounting to a machine and one hole for mounting to the optional swivel base (fasteners not included).

Optional swivel bases rotate 360°, lock in place, and are graduated in 1° increments. They have two holes for mounting to a machine. Hardware for mounting swivel base to vise is included; fasteners for mounting swivel base to a machine are not included. ***CNC-Machine Vise—*** Delivers repeatable clamping accuracy of 0.0005″.

● With jaw faces assembled in outside positions.

Air-Powered Machine Vises

Step on the foot control to instantly close these vises; step again to release. They're great for repeatedly inserting and removing workpieces. Vises have soft steel jaw inserts you can remove to accommodate jigs and fixtures. Four mounting lugs permit bench and machine table mounting (fasteners not included). Multiply your operating pressure by the gripping force factor to calculate your force. To control the amount of force, add an air regulator (see pgs. 971-975).

Single-Acting Vise with Flat Jaws— Vise has a maximum travel of 5/8″. Ram is driven by a diaphragm. Furnished with two 5-ft. long air hoses and foot control valve with guard. Hose connections on vise and foot control valve are 1/4″ NPT female.

Spring-Return Vises with Recessed Parallel Jaws— Vises have a max. travel after setting of 3/8″. Ram is driven by a diaphragm-type spring return air cylinder. Furnished with two 5-ft. long air hoses and foot control valve. Hose connections on vise and foot control valve are 1/4″ NPT male.

Double-Acting Vises with Recessed Parallel Jaws— Vises have a piston-type double-acting air cylinder that returns jaw under air pressure. You can shorten the jaw opening by attaching a stop rod to the back of the movable jaw. Furnished with three 5-ft. long hoses and a foot control valve. Hose connections on vise and foot control valve are 1/4″ NPT male.

Machine Vise Workstop

Position this stop over one of the 1/2″-1″ thick vise jaws on your machine vise. It creates a workstop to allow proper workpiece positioning and provides full-range movement without removing the spring. Turn the socket cap screw to adjust tension. Made of heat-treated cold-rolled steel that's black-oxide plated. Size is 1 7/16″ Lg. × 1″ Wd.

51985A67 ..... **Each** $16.22

Fine-Adjust Rotary Tables

All of these tables rotate 360°; just turn the crank handle(s) to accurately position your work. You can bolt these tables to your drill press, milling machine, or grinder for milling, routing, shaping, grinding, and cutting slots and keyways. They're especially useful for precision layout, screening, and positioning. Made of cast iron, tops are ground and machined to 0.001″ and are graduated in 1° increments. Tables have a worm gear drive to provide smooth operation and an adjustable pointer on the body to set the table top. All have a 1 5/8″ center bore and two 5/8″ × 1″ T-slots at 90°. The handle that controls the 360° rotation of the top is graduated to 1/20°. Mounting fasteners not included.

Cross-Slide Rotary Tables— In addition to controlling the rotation of the tables, you can manually control their lateral and transverse positioning via ball crank handles that are graduated to 0.001″. All have mounting holes and adjust to compensate for wear and maintain accuracy.

Horizontal/Vertical Rotary Tables— Use tables in either the horizontal or vertical position. Tables have four mounting holes (two horizontal holes and two vertical holes).

Horizontal/ Vertical Rotary Table

Fine-Adjust Cross-Slide Tables

Turn the crank handles or hand wheels to position your work exactly where you need it—on two axes (X and Y). These tables are well-suited for inspection and layout jobs, as well as for boring, drilling, grinding, and milling operations. The table tops are made of cast iron. Each base has mounting lugs for 1/2″ dia. bolts. Mounting fasteners not included.

Style 1— The dials are graduated in 0.001″ increments and have a thumb screw for zero setting. The top is precision ground to ±0.001″. Tables have one longitudinal T-slot and three equally spaced cross T-slots. T-slots are 7/16″ × 3/4″. The dovetail slides adjust to compensate for wear and maintain accuracy. The base has a keyway. Table *with 90° tilt* adjusts from 0° to 90°.

Style 2— Hand wheels on both ends of this table let you work from the most accessible side. The dials are graduated in 0.02 mm increments. The top is machined and ground to 0.01″ and has two 9/16″ T-slots that are 2 3/8″ center-to-center. Slides adjust to compensate for wear and maintain accuracy.

Manually Operated Turntables

Rotate these tables the old-fashioned way. They make it easy to position objects for spray painting, assembly and repair work, welding, and more. Turntables are made of steel. All include a rubber platform pad to protect your components from scratches.

Floor models have an adjustable height. 7869T35 has a pedestal base and 7869T36 has a tripod base.

Motorized Turntables

Plug these turntables into a 115 VAC, 60 Hz outlet and they're ready to rotate. Turntables have one-way clockwise rotation. Motor has a 6-ft. power cord with three-prong plug. The top has a through mounting hole you can use to mount objects on the turntable. The base has holes for bench mounting (fasteners not included).

Style 3 is made of both steel and aluminum. ***Style 4*** is made entirely of aluminum and has a three-prong electric outlet to provide power to an object mounted on the turntable.

Precision Positioning Slides

Double Axes (X, Y)

A spring-loaded analog micrometer drive system gives these slides precise, repeatable low-friction movement along one linear axis (X) or two linear axes (X and Y). The micrometer is graduated to 0.001″ (double axes slides have two micrometers). All slides come fully assembled with tapped holes for fixture mounting and have drilled counterbored holes on the bottom for installation. Mounting fasteners not included.

Precision Positioning Slides— Straight line accuracy is 0.0005″ per inch of travel. Carriage is black anodized aluminum with steel ball bearings.

Ultra-Precision Positioning Slides— Straight line accuracy is 0.00008″ per inch of travel. Slides are made of black anodized aluminum and have Type 440C stainless steel ball bearings for low-friction linear movement without backlash or side play. All (except 5239A45 and A56) have a knurled locking screw to lock slide without affecting position. The micrometer also provides travel-distance readout. Top and bottom surfaces are precision ground.

♦ Holes are counterbored.

Adjustable-Height Support Stands

Also known as laboratory jacks, these stands support small shop and laboratory equipment. They have a precision-machined scissor mechanism and an easy-grip thermoplastic control knob for height adjustments. The platform, base, scissor lift, and all hardware are made of 300 series stainless steel.

Note: Do not make height adjustments with weight on the stand.

Ratchet Handle for 9967T45—For easier height adjustments, just remove the knob on the jack and replace it with this 6⅞″ long ratchet handle.

Monitor and Equipment Positioning Arms

Units have a platform for supporting monitors and other equipment. Both have a black powder-coated finish.

Style A—The arm projects the platform 21½″ forward from the mounting point. The platform extends from 16″ to 27¼″ wide (holds most 13″ to 27″ monitors) and has a ¾″ high lip on the front and a safety strap to secure the monitor. The platform swivels 90° and can tilt down 10°. Includes a mounting plate with four 5⁄16″ dia. holes for attaching to a wall (fasteners included). Made of steel.

Style B—Mount monitor directly to the base with the included hardware. Holds most 19″ to 20″ monitors. The base swivels 360° and does not tilt. Includes a mounting plate with one 5⁄16″ dia. center hole for bolting directly to any horizontal surface (fasteners included). Made of heavy duty steel.

ⓘ For additional mounting and attaching dimensions, go to mcmaster.com and search for **4631TAC**.

A

B

	Mounting Style	Load Cap., lbs.	Platform Size, Lg.×Wd.		Each
A	Wall Mount	100	12⅛″×16″-27⅜″	1464A8	$59.15
B	Surface Bolt	125	13″ ×19½″	1464A7	71.16

Extra-Large Monitor Mounting Platforms

Designed to mount very large monitors to the wall. Made of epoxy-coated steel.

Style C—The arm projects the platform 20½″ forward from the mounting surface. The platform swivels 360° and tilts down 10°. Includes a lock and key to secure the monitor to the platform. Units have a mounting plate for attaching to a single wall stud. UL listed.

Style D—The platform swivels 360° and tilts down 30°. Includes mounting brackets for attaching to wall studs (wood stud mounting fasteners included). Unit has a single wall stud and projects 22½″ from the wall. UL and C-UL listed.

C

D

Monitor Mounts

	Fits Monitor Size	Load Cap., lbs.	Maximum Platform Size, Lg.×Wd.		Each
C	19″ to 20″	125	13″×22″	9127T54	$139.99
D	25″ to 27″	125	10″×31″	9127T34	305.32

Video Equipment Mounting Brackets

Designed to fit under the platform of the monitor mounts shown above. Brackets are 6½″ deep and have an adjustable width from 13¼″ to 17¼″. Mounting fasteners are included.

Bracket for Style C has an adjustable height from 1½″ to 2¾″.

Bracket for Style D has an adjustable height from 2 11⁄16″ to 4½″.

		Each
For Style C	9127T68	$95.74
For Style D	9127T39	90.42

Flat Panel Monitor Ceiling Mounts

Save space by suspending your flat-screen monitor from the ceiling. Mounts are made of steel with a black powder-coated finish. All swivel 360° and include mounting plates and fasteners.

Style E mounts tilt down 20° and up 5°. They include clips to route cables along the pole. Both are compatible with 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole patterns. 4653T12 is also compatible with 200 mm and 100 mm×200 mm VESA mounting hole patterns.

Style F mount tilts down 15°. Route cables through the pole. Supports a mounting hole pattern of up to 500 mm×860 mm.

E

Flat Panel Monitor Positioning Arms

Light Duty Surface Mount

Light Duty Wall Mount

Optional Desk-Top Mounting Adapter

Heavy Duty Wall Mount

Wall Plate

Light Duty Surface-Mount Arms

Arms are made of die cast aluminum and have gas springs that counterbalance the weight of the monitor for easy positioning. Arms mount directly on 1″ to 2″ thick horizontal work surfaces and raise the monitor a maximum of 14″ above the work surface. The attaching point swivels 360°, tilts up 120°, tilts down 60°, and pans side-to-side 90°. Arms include mounting plates for both 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole patterns.

1993A3 bolts directly to your work surface (fasteners included); 1993A5 has a clamp mount.

Mounting Style	Load Cap., lbs.	Base Size	Projection Range		Each
Surface Bolt	6 to 21	4″ Dia.	4″ to 22″	**1993A3**	$312.50
Surface Clamp	6 to 21	4″ Dia.	4″ to 22″	**1993A5**	312.50

Light Duty Wall-Mount Support Arms

Great for lightweight equipment mounting, these arms are made of die cast aluminum with a silver powder-coated finish. Base has a 75 mm and 100 mm VESA (Video Electronics Standards Association) mounting hole pattern. Furnished with a 3/16″ Allen wrench and wood stud mounting fasteners.

All attaching points rotate 360° and tilt up and down 180°. 4628T12 and T13 also tilt side-to-side 210°.

Maximum Projection	Load Cap., lbs.	Base Size, Wd.×Ht.		Each
3 3/16″	40	2 7/16″×3 13/16″	**4628T11**	$45.45
5″	40	2 7/16″×3 13/16″	**4628T12**	63.64
11″	40	2 7/16″×3 13/16″	**4628T13**	90.91

Heavy Duty Wall-Mount Support Arms

Use these support arms to mount LCD and plasma monitors as well as flat-screen televisions. Designed for easy installation, units have a wall plate with a built-in bubble level. After mounting the wall plate, slide the bracket (with arms and attaching point) over the wall plate until the two pieces snap together. Wall plate, support arms, and attaching point are die cast aluminum; bracket is steel. All components have a black powder-coated finish. Dual-arm design allows you to position screens up to 8″ from the wall and 8″ off-center from the wall stud. The attaching point tilts 15° up and down and swivels up to 30° side-to-side. Wall plate has a hook to keep cords organized. Furnished with mounting fasteners.

Compatible with 75 mm, 100 mm, and 200 mm VESA (Video Electronics Standards Association) mounting hole patterns. 1133A2 is also compatible with a 400 mm VESA mounting hole pattern.

You can attach the wall plate to the ***optional desk-top mounting adapter*** (sold separately). Adapter securely clamps to most desk tops and tables. Made of steel with a black powder-coated finish. Mount the wall plate (not included) on the adapter from a min. of 8 1/2″ to a max. of 16 1/2″ above the desk top.

Fits Monitor Size	Load Cap., lbs.	Base Size, Wd.×Ht.		Each
10″ to 30″	60	1 3/4″×6 1/2″	**1133A1**	$41.45
10″ to 37″	100	2 1/2″×7 1/2″	**1133A2**	65.45
Optional Desk-Top Mounting Adapter (22 1/2″ Ht.×6″ Wd.×4″ Dp.)			**1133A3**	36.36

Positioning Arm Systems and Components

These systems have rigid arms that move horizontally with a single touch as well as friction adjustment to control drift. You can select a complete system or design your own using the components we offer below. All components are steel with a black enamel finish (except where noted).

(A&B) Bases

A B

Fasteners are not included.

(A) Bench-Bolt Mounting Plate—For use with rigid (C) as well as counterbalanced (D) arms.

(B) Wall-Mount Mounting Plate—For use with rigid arm (C). It can be used with a counterbalanced arm (D) when a rigid arm (C) is also used.

Size	Load Cap., lbs.	Mounting Hole Size (Qty.)		Each
A 6″ Lg.×6″ Wd.	100	13/32″ Dia. (4)	**5164T51**	$80.39
B 6″ Lg.×6″ Wd.	100	13/32″ Dia. (4)	**5164T52**	80.39

(C&D) Connectors

C D

(C) Rigid Arms—Use them alone for horizontal movement or combine with counterbalanced arms (D) for both vertical and horizontal movement. You can connect multiple rigid arms up to a maximum length of 48″.

(D) Counterbalanced Arms—Provide vertical movement (+40°, –35°). Load capacity is adjustable (use a 1/2″ socket wrench, not included). Arms connect directly to a bench-mount mounting plate (A). When used with a wall-mount mounting plate (B), a rigid arm (C) is required.

	Lg.	Load Cap., lbs.		Each
C	6″	100	**5164T61**	$82.69
C	12″	100	**5164T62**	90.38
C	18″	100	**5164T63**	102.00
C	24″	100	**5164T92**	108.00
D	13 1/2″	18 to 43	**5164T74**	241.47
D	18″	6 to 33	**5164T72**	285.76
D	24″	16 to 35	**5164T73**	334.00

(E-J) Ends

E F G H J

Fasteners are not included, except where noted.

(E) Straight and ***(F) Tee Extensions***—Use these extensions alone; tee extension (F) can also be used with load shelf (H). When connecting to a rigid arm (C), a connector pin (J) is required.

(G) Pivoting Plate—Allows 360° rotation of your load. It can be used with a rigid arm (C) as well as load shelf (H).

(H) Load Shelf—For use with tee extension (F) as well as pivoting plate (G). Made of wood with a black veneer top. Fasteners included.

(J) Connector Pin—Furnished with two retaining rings. It's required when connecting a straight (E) or tee (F) extension to a rigid arm (C).

	Size	Load Cap., lbs.	Mount. Hole Size (Qty.)		Each

Complete Positioning Arm Systems

B C C G

Both of these wall-mount systems include a 6″ Lg.×6″ Wd. wall-mount mounting plate (B) with four 13/32″ dia. mounting holes, and a pivoting plate (G) with four 13/32″ dia. mounting holes that swivels 360° but does not tilt. 5164T1 also has two 12″ rigid arms (C); T2 has two 18″ rigid arms (C).

Max. Projection	Load Cap., lbs.		Each
24 3/4″	100	**5164T1**	$302.61
36 3/4″	100	**5164T2**	340.43

Warning! ***Capacity is based on maximum projection. Never exceed capacities.***

For additional mounting and attaching dimensions for the products on this page, go to mcmaster.com and search for **5031TAC**.

Ball-Grip Positioning Arms

Create your own custom positioning arm by choosing a base, connector, and end from the selection below. All pieces are aluminum with a black powder-coated finish. Bases and ends have a 1½″ dia. ball on one side that quickly snaps into the connector, allowing it to swivel 360°. Ball is made of nitrile rubber and has a temperature range of –40° to +140° F. Maximum load capacity is 10 lbs. (except Style D is 1 lb.). Mounting fasteners are not included.

(A-G) Bases—Attach the ball end to the (H) connector; the other end mounts directly to your work surface.

(A) Round—Has seven 0.22″ dia. mounting holes.

(B) Parallel-Bar Clamp—Clamps onto square and rectangular bar and tubing. Fits a maximum bar size of 2⅛″ Ht.×2½″ Wd.

(C) Round-Bar Clamp—Clamps onto round bars, rails, and pipes. Fits a maximum OD of 1¼″.

(D) Suction Cup—Has a rubber suction cup that quickly attaches to smooth surfaces such as glass and polished metal.

(E) Swinging Arm—The arm swivels 360° around the base. The base has four ¼″ dia. mounting holes. 5031T77 requires two ½″ wide hose clamps (not included) for mounting to pipe.

(F) Double Swinging Arm—Similar to Style E, except these have two arms for greater extension. Base has four ¼″ dia. mounting holes. 5031T25 requires two ½″ wide hose clamps (not included) for mounting to pipe.

(G) Lift Lock Arm—You can lock the arm into any position. Base swivels 360° and tilts 90° up and 65° down; it has four 5/16″ dia. mounting holes. 5031T26 lifts a maximum of 13¼″; T27 lifts a maximum of 15¾″.

Mounting Style	Base Size, Lg.×Wd.	Max. Ht.	Max. Extension		Each
A..Bench Bolt	2.44″ Dia.	2.16″	____	5031T63	$15.29

Ultra Flexible Positioning Arms

Easily bend or pivot these support arms to hold small equipment such as machine lights, medical equipment, inspection lights, and microphones in almost any position.

(N) Ball and Socket Arm

This arm has a plate-style attaching point with ball connector and a flexible shaft that stays put where you position it. Arm is made of black die cast zinc and requires #10 screws or bolts for mounting (not included).

	Maximum Projection	Load Cap., lbs.	*Mounting Point* Size, Lg.×Wd.	Swivel	Tilt	Mount. Hole Size (Qty.)	*Attaching Point* Size, Lg.×Wd.	Swivel	Tilt	Mount. Hole Size (Qty.)		Each

(Q-S) Gooseneck Arms

The attaching points on these arms do not swivel.

Style Q—A dual base lets you mount these arms by bolting through or clamping onto surfaces up to 2″ thick. Arms are hollow and have an opening at the base for cords to pass through. Arms are steel with a baked-on gray painted finish. Thread connection is ⅛″-27 NPT and extends ¼″ from the end of the arm.

Style R—Clamp these bases onto surfaces up to 2″ thick. Polyurethane pads on the clamp prevent marring on the mounting surface. Arms are steel with a black vinyl finish; have a ⅜″-16 female thread connection that is ½″ deep.

Style S—The magnetic base on these arms has 100 lbs. of pull strength for extra holding power. Place them on any magnetic surface. Arms are steel with a black vinyl finish; have a ⅜″-16 female thread connection that is ½″ deep.

Support Arms

All have a plate-style mounting point for fastening directly to your wall, ceiling, or benchtop.

Style A— Made of steel with a black powder-coated finish, these arms come with a slip-resistant pad that attaches to the platform and reduces vibration. Mounting fasteners are not included.

Style B— Made of aluminum with a black powder-coated finish. It has two nitrile ball joints that can be locked into position with the nylon hand knob. Mounting fasteners are not included.

Style C— Made of aircraft-grade aluminum, this arm has a polymer ball joint that allows for infinite angles of adjustment. Arm locks in place with a nut on the mounting plate. Mounting fasteners are not included.

Style D— Made of aluminum with a black anodized finish, these arms have two joints for a wide range of motion. Both joints tilt ±60°. Arms swivel at the mounting bracket. Knobs lock the arms into position. Mounting fasteners are included.

ⓘ For additional mounting and attaching dimensions, go to mcmaster.com and search for **8262KAC**.

Suction-Cup Support Arms

The vinyl suction cup mounting point on these supports quickly attaches to smooth surfaces such as glass and polished metal. *Note:* Mounting surface must be flat, clean, and dry.

Style E— Arm is made of aircraft-grade aluminum. It has a plate-style attaching point with four 3/16″ dia. holes to mount your equipment and a ball connector that locks into position with a knob. Arm has a shaft that extends and locks into position.

Style F— For added adjustability, this arm has a joint that tilts ±255° but does not swivel. Arm is made of polycarbonate plastic and has a ¼″-20 threaded stud attaching point. Arm extends and locks into position with a knob.

Style G— This arm has two joints for a wider range of motion. One joint swivels 360° but does not tilt; the other joint tilts ±180°. Arm is made of cast aluminum with a black powder-coated finish and has a ¼″-20 threaded stud attaching point. Arm extends and locks into position with a knob.

Adjustable-Height Versahead Positioning Stands

High load capacities and several mounting adapters give these stands tremendous versatility and flexibility. Telescoping legs and an extendable central column facilitate height adjustment. Legs have crossbars for added stability, unless noted.

Style H— With the highest load rating, this stand is ideal for heavy duty usage. Has 4″ self-leveling footplates with a ⅝″ hole for staking. Includes a 6″ diameter head with four ¼″-20 and four ⅝″-18 mounting holes for easy attachment. Also includes screws on the head. Made of aluminum.

Style J— Strong and lightweight. Central column has a gas cylinder for height adjustment. Has a safety latch to lock central column in down position, and tightening knobs and side-mounted clamp locks for legs. Made of aluminum and steel. Head not included: sold separately (*Styles L* and *M*) below.

Style K— Includes a pan and tilt head, which swivels 360° and tilts 90°. Lightweight and easy to transport. Legs are aluminum and do not have crossbars. Adjust height of central column via wing locks. Head has ¼″-20 mounting connections and quick-release attachment plate. Includes storage case.

Heads for Style J— Both have a ¼″-20 stud and locking pin to attach stand. Made of aluminum. *Style L* is 3¼″ diameter. *Style M* is 7⅛″ Wd. × 8¾″ Lg., is ideal for larger equipment, and has a pan and tilt head that swivels 360° and tilts –90°, +15°.

Adapter Plate— Allows you to mount equipment that lacks the standard camera-style thread. Has a central ¼″-20 hole in a 4″ square ⅜″ thick aluminum platform with four 0.225″ unthreaded holes spaced 1½″ × 1 3/16″ apart. You can also drill and tap holes to meet your mounting requirements.

Ball-Grip Adapter— Has a 1½″ dia. nitrile ball that allows for 360° swivel positioning. A ¼″-20 screw beneath the base can be removed to provide a female ¼″-20 connection that adapts *Styles J* and *K* for use with our Ball-Grip Positioning Arm connectors and ends (see 5031T on page 2573). It has a 2.44″ dia. aluminum base with seven 0.22″ dia. drilled holes for attachments.

	Height Range	Load Capacity, lbs.		Each

Ultra-Precise Micropositioner

Control the position of small equipment such as laser sensors with this compact support mount. It allows precise linear adjustments in 0.001″ increments; total adjustment range is 1/2″. A knurled knob on the base makes it easy to set the position of the unit. Mount your equipment using the brackets sold separately below; brackets are available in a variety of thread sizes to fit your equipment and can be mounted in eight different positions.

Unit is made of lightweight anodized aluminum and has a load capacity of 5 lbs. Overall size is 3 1/2″ Lg. × 1 3/4″ Wd. × 5/8″ Ht. Requires two 10-32 socket head cap screws for surface mounting (not included, see page 3112).

		Each
Micropositioner	6120A1	$478.57
Bracket with M8 Threaded Hole	6120A5	38.21
Bracket with M12 Threaded Hole	6120A6	68.00
Bracket with M18 Threaded Hole	6120A7	68.36
Bracket with 1/4″-20 Threaded Hole	6120A8	38.21

Tool Supports

Mount these supports on or adjacent to your workbench to suspend and position power tools for assembly work. Bench- and floor-mount supports consist of a support arm and vertical column. Wall-mount supports consist of a support arm only.

Bench-Mount Supports

Both models have a 37″ high vertical column made of 1″ square, 18-ga. steel tubing with a polished chrome finish. They also have a support arm that swivels 360° and a tool positioner that slides along the length of the arm. The support arm is made of 1″ square, 18-ga. steel tubing with a polished chrome finish and has a load capacity of 7 lbs. You can position the support arm at any height along the column. The base of the column has a 3″ Lg. × 3″ Wd. steel mounting plate with four 9/32″ dia. holes (mounting fasteners included).

Optional bench clamp allows you to quickly mount the support on workbenches up to 2 1/2″ thick. It's a good alternative to bolting the support directly on your workbench.

Arm Lg.		Each
18″	6139T23	$104.18
24″	6139T24	108.55
Optional Bench Clamp	6139T29	41.39

Floor-Mount Supports

Supports have a 9-ft. high vertical column and a support arm that swivels 180°; you can position the support arm at any height along the column. The base of the column has a mounting plate with four 17/32″ dia. holes (mounting fasteners not included). Furnished with a tool positioner that slides along the length of the arm and a hose/cable end clamp.

49385T22 has a vertical column that's made of 1 5/8″ square, 12-ga. steel track. T32 has a vertical column that's made of 3 1/2″ dia., 13-ga. steel tube; it also includes a hose/cable trolley.

Tool Positioner and Hose/Cable End Clamp

Arm Lg.	Arm Material	Load Cap., lbs.	Mounting Plate Size, Lg. × Wd.		Each
3 ft.	1 1/4″ × 1 1/4″, 16-ga. Steel	30	6″ × 5″	49385T22	$389.33
6 ft.	1 5/8″ × 1 21/32″, 12-ga. Steel	50	6″ × 6″	49385T32	775.11

Wall-Mount Supports

Both have an arm that swivels 180°, a hose/cable end clamp, and a tool positioner that slides along the length of the arm. 49385T21 has a mounting plate with two 7/16″ dia. holes; T31 has a mounting plate with six 17/32″ dia. holes. Mounting fasteners are not included.

Arm Lg.	Arm Material	Load Cap., lbs.	Mounting Plate Size, Lg. × Wd.		Each
3 ft.	1 1/4″ × 1 1/4″, 16-ga. Steel	30	4 1/4″ × 1 1/2″	49385T21	$260.84

Spring-Powered Return Reels

Stem Mount

Shaft Mount

Bracket Mount

Covered Bracket Mount

Once they're mounted, these returns can handle a variety of counterbalancing, retrieving, returning, and other long-retraction functions. Mounting fasteners are not included. *Note:* Reels do not lock in place after the load is attached.

Stem Mount — Have a high-carbon steel spring, zinc-coated steel case, 5 1/16″ dia. cable reel, and 1 1/2″ Wd. × 8 3/4″ Ht. mounting stem. The cable measures 3/32″ in diameter and is made of nylon-coated galvanized steel.

Shaft Mount — Have a high-carbon steel spring, 3 3/8″ dia. cable reel, and mount directly on a 5/16″ square arbor (except 6653A25 has a 5″ dia. cable reel and mounts on a 7/16″ arbor and A26 has a 6″ dia. reel and mounts on a 7/16″ arbor). The cable measures 3/32″ in diameter and is made of nylon-coated galvanized steel.

Bracket Mount — Has a Type 301 stainless steel spring and 2 1/32″ Ht. × 2 3/8″ Wd. × 23/32″ Dp. zinc-coated steel bracket with two 0.238″ dia. mounting holes. The cable measures 0.034″ in diameter and is made of nylon-coated stainless steel.

Covered Bracket Mount — Have a 300 series stainless steel spring and 3 21/32″ Ht. × 2 13/32″ Wd. × 1 1/8″ Dp. aluminum bracket with four 3/16″ dia. mounting holes. The cable measures 0.035″ in diameter and is made of plastic-coated stainless steel.

100″	0.5	61215A65	120.22

Constant-Force Spring-Powered Return Reels

An alternative to electric motors, counter-weights, and power springs, these returns provide constant force (torque) through the spring's cable travel of extension and retraction.

Returns have a strip of Type 301 stainless steel spring that's wound into a coil. This coil is stored in one or two nylon storage drums (see table below) and one output drum with an integral cable reel. When you attach a tool or other weighted object to the cable, the storage drums release the spring until it's counterbalanced.

61115A1 has a stainless steel base, 0.015″ dia. nylon cable, and no mounting holes. All others have a zinc-plated steel base, 0.024″ dia. stainless steel cable, and four 0.177″ dia. mounting holes (fasteners not included).

With Two Storage Drums

Cable Tension, lbs.	Cable Travel	Spring Torque, lb./in.	Ht. × Wd. × Dp.		Each
With One Storage Drum					
0.375	36″	0.10	1 5/8″ × 1″ × 5/8″	61115A1	$94.55

4	72″	3.12	3 3/4″ × 2 7/8″ × 1 3/16″	61115A5	134.55
5	72″	3.90	3 3/4″ × 2 7/8″ × 1 3/16″	61115A6	149.09

Spring Counterbalances

Side Style

Overhead Style

Use these counterbalances for components that must be suspended, lifted, or retracted, such as tools, windows, and doors. Once your tool or other weighted object is attached to the load clip, the spring is released until counterbalanced. All units have a strip of Type 430 stainless steel spring that's wound into a coil on a steel drum and enclosed in a steel housing. Counterbalances with a 46″ travel have two 3/16″ dia. mounting holes; units with a 54″ or 60″ travel have two 1/4″ dia. mounting holes. All include mounting fasteners.

Note: When using counterbalances on windows, two counterbalances are required for each sash. However, the load capacity shown is for one counterbalance.

***Side Style*—**Mounts on a vertical frame.

***Overhead Style*—**Mounts in the corner of a horizontal frame.

Tool Retractors

A

B

C

D

E

F

G

These retractors have a cable that retracts automatically, so you can always have the tool you need nearby. Just pull the tool down when you're ready to work and let go of it when you're finished. The cable will automatically pull your tool back up as it retracts into the housing.

All retractors have an adjustable tension control. This lets you set the cable tension and slow down the rate of retraction. This feature also allows the retractors to hold your tool in a set position without any pull on the cable.

Tool retractors do not counterbalance the weight of your tool. However, *retractors with ratchet lock* have a ratchet mechanism that slows down the cable retraction and halts the retractor at set positions so you can control the movement of the tool. Just tug on the cable to release the lock.

All of these retractors mount at the top and have an adjustable cable stop with snap-style tool clip for quick tool changes. For the best performance, choose a unit where the total weight supported by the unit falls in the middle of the capacity range. The total weight should include such things as the tool fittings, hose, and cord.

***Style A*—**Has a fixed shackle with 1/2″ opening. Adjust tension with a wrench or pliers.

***Style B*—**Has a 8 5/8″ Lg. × 2 1/2″ Wd. mounting bracket with four 3/8″ dia. mounting holes (fasteners not included). Adjust tension with a wrench or pliers.

***Style C*—**Have a shackle with 3/4″ opening that swivels 360°. Adjust tension with a wrench or pliers.

***Style D*—**Have a mounting hanger with 13/16″ shackle that swivels 360°. Adjust tension by simply turning the hand knob.

***Style E*—**Have a hanger for mounting. Wind drum to adjust tension. Release tension with lever.

***Style F*—**Have a swivel hook with 5/8″ opening. Adjust tension by turning the hand knob.

***Style G*—**Have a 5/8″ opening for mounting. Adjust tension using the included tool.

● Nylon coated.

Mini Tool Retractors

Designed to hold your tool out of the way until it's needed. When you're ready to work, just pull the tool down. After you've finished working, let go of the tool and the cable will automatically retract into the housing and pull the tool back up. All units mount at the top and have a 1″ stainless steel split ring for quick tool changes. 30155T11 and T12 have a belt loop for belts up to 2¼″ wide. T11 also has a strap with snap-style mounting hook with 1⁵⁄₁₆″ opening. T13 has a stainless steel belt clip.

Style	Load Cap., lbs.	Cable Travel	Cable Dia.	Cable Material	Lg. × Wd.	Housing Material		Each
With Belt Loop and Strap	1.25	1.7′	5⁄64″	Nylon	2½″ × 2⅛″	Plastic	30155T11	$29.44
With Belt Loop	1.25	1.7′	5⁄64″	Nylon	2½″ × 2⅛″	Plastic	30155T12	29.44
With Belt Clip	1.25	1.7′	5⁄64″	Nylon	2½″ × 2⅛″	Plastic	30155T13	34.87

Tool Positioner

This unit allows you to place your tool at any position along the cable travel length and holds the tool in that position the entire time you're working. When you've finished working, just lift the tool up until the cable retracts into the housing.

Positioner has a top mounting hanger with ½″ shackle and an adjustable cable stop with snap-style tool clip for quick tool changes. Adjust tension by using a screwdriver to turn the slot on the shaft.

Note: The total weight for the load capacity may include tool, air hose, and fittings.

Load Cap., lbs.	Cable Travel	Cable Dia.	Cable Material	Lg. × Wd.	Housing Material		Each
1-12	4.7′	3⁄64″	Nylon	5⅛″ × 2¼″	Composite	6739A41	$21.06

Tool Balancers

The preferred choice for continuous tool use, these balancers are designed to support the full weight of your tool and prevent hand fatigue. Balancers make your tool "weightless" so you can reposition it with minimal effort. All have an internal spring wrapped around a tapered drum that counterbalances the entire weight of the tool attached to the cable. Units mount at the top and include a cable stop with snap-style tool clip for quick tool changes (cable stop is adjustable for Style A). For the best performance, choose a balancer where the total weight it will support falls in the middle of the capacity range. The total weight should include such things as the tool fittings, hose, and cord.

Balancers with ratchet lock have a ratchet mechanism that slows down the cable retraction and halts the balancer at set positions so you can control the movement of the tool. Just tug on the cable to release the lock.

Style A— Have a mounting hanger with ¾″ shackle that swivels 360°. Adjust tension with a wrench or pliers.

Style B— Have a mounting hanger with 1¹⁄₁₆″ shackle that swivels 360°. Manually lock the drum to replace a tool. Loads are secured by an automatic lock. Adjust tension with a wrench or pliers.

Styles C & D— Just like Style B with the addition of a four-roller cable guide that prevents excessive wear on the cable and drum. They also have an internal mechanism that prevents spring damage.

Air-Controlled Tool Counterbalancer

For precise tool counterbalancing, this balancer has a built-in air regulator for adjusting tension. Once tension is set, it remains constant throughout the 5-ft. cable travel range.

Balancer is 20⅛″ Lg. × 10¼″ Wd. It has a steel housing, ⅛″ dia. steel cable, and load capacity of 50 lbs. Maximum air pressure is 100 psi. Air inlet connection is ¼″ NPT.

Balancer has a top mounting hook with 1″ opening that swivels 360°. It also includes a snap-style tool clip for quick tool changes.

48005T86 ..... **Each** $1,026.48

Air-Tool Counterbalancers with Built-In Hose Reel

Tired of the clutter and tangles caused by air tools that require a balancer with cable and separate air hose? These balancers have their own retractable braided air hose so you can attach your air tool right to them.

All are 10″ Lg. × 7½″ Wd. and have a high-impact ABS plastic housing. Maximum air pressure is 145 psi. Air inlet connection is ¼″ hose barb. Air tool connection is ¼″ NPT. Balancers have a top mounting hook with ½″ opening that swivels 360°. Manually adjust tension.

Load Cap., lbs.	Air Hose Travel	Air Hose Dia.	Air Hose Material		Each

Ultra-Force Steel C-Clamps

Regular

Square

Heavy Duty

Extra Heavy Duty

The strongest clamps we offer. Clamps have a forged premium steel frame with a black finish and a heat-treated steel screw and handle for maximum strength and durability.

Regular— The most popular style, these clamps have a swivel pad and a sliding-pin handle.

Square— Built just like the *regular* clamps, but with a squared off frame for an even larger throat depth (A).

Heavy Duty— Superior holding power in a space-saving shape. Use when you don't need the large throat depth of the *regular* and *square* styles, or the high strength of the *extra heavy duty*. All have a swivel pad and a sliding-pin handle.

Extra Heavy Duty— The strongest of the strong, these clamps offer the maximum holding capacity. The screws have a hardened tip and a square head that must be tightened with a wrench.

High-Visibility Ultra-Force Steel C-Clamps

Similar to our regular-style Ultra-Force Steel C-Clamps, but with a brightly colored finish for better visibility and safety. Offered in safety yellow and safety orange, so you can also use them to color code your work.

Clamps have a high-strength, forged steel frame with a tough, baked-on enamel finish. The screw and sliding-pin handle are steel with a black finish. All have a swivel pad.

High-Force Steel C-Clamps

Junior

Regular

Extra Deep

Stronger than our Medium-Force Iron C-Clamps, but not as strong as our Ultra-Force Iron C-Clamps. Clamps have a high-strength, forged steel frame with a rust-resistant, gray powder-coated finish (unless noted). All have a swivel pad, and a steel screw and sliding-pin handle.

Junior— A narrow profile makes these clamps ideal for smaller-sized clamping jobs. The screw and handle are zinc plated for added rust resistance.

Regular— The most popular C-clamp design, these clamps are good for general-purpose holding.

Extra Deep— Clamps have a larger throat depth (A) than our other clamps, which provides more space for reaching around your workpiece.

★ Black powder-coated finish.

Medium-Force Iron C-Clamps

Regular

Deep

Extra Deep

Heavy Duty

Iron clamps offer good strength and durability. All are heat treated (unless noted) and have a steel screw, sliding-pin handle, and replaceable swivel pad. All, except 5033A9 and heavy duty, are ribbed to resist side strain.

Regular, also called carriage clamps, are basic C-clamps with a plain finish (unless noted).

Deep and ***extra deep*** give you more clearance around all sides of the workpiece. *Deep clamps* have a black baked-enamel finish; *extra-deep clamps* have a plain finish.

Heavy duty have more holding capacity than the other clamps. They have a black baked-enamel finish.

♣ Not heat treated; has a gray powder-coated finish.

Heat-Activated Clamping Compound

Hold precision parts in place without a clamp while machining. Heat-activated compound bonds to steel, aluminum, glass, wood, and most plastics. Ideal for thin and hard-to-hold parts, it allows for machining on five sides of the workpiece.

Compound is coated on a 0.0005″ thick release liner and has a holding force of 40 psi. To use, apply compound and position the part. Heat the part to 180°-200° F; when finished, reheat to 180°-200° F to release the part. Can be used with a water-based coolant and cleans up easily with rubbing alcohol.

Light-Force Iron C-Clamps

Regular

Regular with Nylon Tips

Deep

Clamps have an iron frame with a steel screw and swivel pad; the swivel pads are replaceable (unless noted).

Regular— All have a steel sliding-pin handle and a zinc-plated finish for rust resistance (unless noted).

Regular with Nylon Tips— Nylon pads on the clamping surfaces prevent marring. Clamps have a steel thumbscrew handle and a plain finish. The swivel pads are not replaceable.

Deep— A deeper throat than regular clamps provides more space for reaching around your workpiece. They have a steel sliding-pin handle (unless noted) and a rust-resistant, zinc-plated finish.

Three-Way Iron C-Clamp

Three screws let you apply pressure on three sides of your workpiece. Great for gluing, welding, trimming, and cutting applications. Clamp has two sliding-pin handles and one thumbscrew handle. Made of zinc-plated malleable iron with steel screws and swivel pads.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	Screw Dia.		
2½″	0″	2½″-0″	800	⅜″	5143A11	$10.50

Corrosion-Resistant Type 316 Stainless Steel C-Clamps

Forged

Cast

Extreme environments are no problem for these corrosion-resistant clamps—use them anywhere, from clean rooms to marinas. They're made of Type 316 stainless steel.

Forged Stainless Steel—Have a polished finish, a swivel pad, and a sliding-pin handle.

Cast Stainless Steel—Are smaller than the *forged stainless steel* clamps. These compact clamps have a swivel pad and thumbscrew handle. Not rated for holding capacity.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	Screw Dia.

Corrosion-Resistant Fiber-Reinforced C-Clamps

Screw Tip

Swivel Pad Tip

Made from fiber-reinforced plastic, these clamps are corrosion resistant as well as strong. Resistant to acids, alkalies, and boiling water, they are ideal for all plating and anodizing applications, as well as for general clamping. Clamps have a thumbscrew handle. Select clamps with either a screw tip or a swivel pad tip. Minimum opening is 0″.

Welders' Steel C-Clamps

Regular

Deep

With moving parts protected from weld spatter, these clamps are perfect for welding.

Regular with Copper-Plated Components—Have the traditional C-clamp design with a copper-plated steel screw, swivel pad, and sliding-pin handle to resist weld spatter. Frames are heat-treated steel for strength and durability.

Deep with Zinc-Plated Components—Clamps have a deeper throat than the *regular* clamps, which provides more space for reaching around your workpiece. Screw, swivel pad, and sliding-pin handle are zinc-plated steel for weld spatter resistance. Frames are heat-treated steel for strength and durability.

Cantilever C-Clamps

Detail of V-Groove

T-Handle

Round Knurled Handle

T-Handles and Three-Way Jaws

Cantilever clamp jaws pivot to keep clamping surfaces parallel so your work won't twist off-center under pressure.

Steel— Have corrosion-resistant, zinc-plated frames and copper-plated screws and jaws that resist weld spatter. Clamping surfaces are V-grooved for holding round stock or have a smooth nylon pad to prevent marring. *T-handles* are easy to grasp. *Round knurled handles* are best for confined spaces. Clamp with *three-way jaws* has two T-handles, two V-grooved jaws, and a smooth swivel pad for exerting pressure on the top, bottom, and side of the workpiece.

Type 303 Stainless Steel— Clamps are corrosion resistant, have a T-handle for easy gripping, and aren't magnetic. Clamping surfaces are V-grooved for holding round stock.

● Handle is L-shaped.

Replacement Swivel Pads for C-Clamps

Replacing clamp pads couldn't be easier—the clamp's own pressure forces the pad onto the end of the screw. Made of steel with a steel-toothed washer inside to ensure a tight grip. Pads are flat except for 5076A5, which is V-grooved.

To determine which pad you need, remove the existing pad from your clamp. Measure the ball diameter and refer to the ball diameter ranges listed.

Pad Dia.	Ball Dia. Range		
1″	0.395″-0.400″ (25/64″)	5076A1	$2.75
1 1/4″	0.395″-0.400″ (25/64″)	5076A41	3.71
1 1/4″	0.452″-0.457″ (29/64″)	5076A21	4.77
1 3/8″	0.570″-0.575″ (37/64″)	5076A31	3.71
1 3/8″	0.570″-0.575″ (37/64″)	5076A5▲	5.42

▲ V-grooved.

Quick-Adjustment Steel Bar Clamps for Recessed Areas

Get into those hard to reach places. The J-shape of these clamps provides extra reach into recessed areas up to 4″ deep. Plus, the sliding head allows for fast clamping—simply slide head into position and turn the handle to tighten. Clamp is heat-treated, cold-drawn galvanized steel and has a sliding-pin handle and a swivel clamp. Clamping surfaces are smooth to prevent marring.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	Screw Dia.		
12″	0″	5 1/2″	2,660	3/4″	7543A11	$141.38
20″	0″	7″	4,880	3/4″	7543A14	280.19

Quick-Adjustment Steel Bar Clamps

With Ratchet Handle

With Sliding-Pin Handle

The best of both worlds—the quick adjustability of a bar clamp and the jaw depth of a C-clamp. Just slide the head into position and either squeeze the ratchet handle or turn the screw to tighten. All clamping surfaces are smooth.

Clamps with Ratchet Handle— Clamps stay firmly in place making them ideal in applications where vibrations could cause clamp to move. Frame and sliding arm are forged steel. Ratchet mechanism and handle are steel.

Clamps with Sliding-Pin Handle— Sliding handle provides a secure grip as you tighten and loosen the clamp. Frame, head, and handle are a heat-treated alloy steel that is zinc plated for added durability. Screw is steel.

■ Screw has a copper-plated finish.

Rugged-Service Steel Bar Clamps/Spreaders

With a frame and head made of epoxy-coated steel, these clamps are strong and durable. Plus, they combine the wide-opening capability of a bar clamp with the rugged construction of a C-clamp. Just slide the spring-loaded head to the nearest notch, then turn the handle for final hand tightening. Simply reverse the spring-loaded head to use clamp as a spreader.

The handle is a sliding pin that's positioned to remain out of your way and shielded from weld spatter. A V-grooved swivel pad accommodates round stock.

High-Force Cast Iron Bar Clamps

End Profile of Bar Clamp

Strong and durable, yet simple and easy to use. Just slide the jaw into position and turn the crank handle to tighten the screw. Clamps have a bar that's shaped like an I-beam, which provides reinforcement for maximum holding capacity. They have a clutch in the sliding jaw that holds position anywhere along the bar. Clamps are made of malleable iron with a steel bar and screw; screw has Acme threads. The clamping surfaces are smooth to prevent marring.

Nonmarring Bar Clamps/Spreaders

Simply reverse the head on these clamps and you can use them as a spreader. Extra-large nonmarring plastic-covered jaws remain parallel to keep your workpiece tight in the jaws without lifting, bowing, denting, or marking. Clamps have an easy-to-adjust sliding head and an end stop. A built-in stand allows clamp to sit upright. Made of steel with a maple handle.

Quick-Grip Bar Clamps

Clamp

Clamp/ Spreader (shown as spreader)

It doesn't get easier or quicker than one-hand clamping. You simply squeeze the pistol-grip handle to lock clamp in place and press the release trigger to open it instantly. Made of strong, lightweight, glass-reinforced resin with a steel bar. All have smooth rubber pads to protect work surfaces from marring. ***Clamps/spreaders*** can be used as a bar clamp or as a spreader by reversing the jaws to apply outward pressure. Great for glued joints.

Medium-Force Cast Iron Bar Clamps

With Maple Handle

With Sliding-Pin Handle

When a little strength is not enough and a lot is too much, these clamps will handle the job. All adjustments are made with the sliding head, making these clamps easy to position and suitable for close-quarters work. Clamps are made of malleable iron with a steel bar, screw, and swivel pad for strength. The clamping surfaces are smooth to prevent marring.

Clamps with maple handle have a clutch in the sliding head to securely grip the bar.

Clamps with steel sliding-pin handle have a locking mechanism to engage the bar when the sliding head is tightened against the workpiece.

Light-Force Cast Iron Bar Clamps

These lightweight clamps are perfect for jobs that require a low holding capacity with minimal clamping force. Slide the head into position and tighten the screw to clamp. Clutch in sliding head holds position anywhere along the bar. Clamp is cast iron with a steel bar, screw, and swivel pad. Handle is maple. Clamping surfaces are smooth and nonmarring.

Press Screws

With a screw nut that mounts into a drilled 1″ hole allowing the threaded rod to move in or out, these clamps are great for veneering, gluing, and welding.

Made of iron with a steel screw. Include a crank handle and a 1 3/8″ Ht. × 1 5/8″ Wd. swivel pad that can be removed for easy installation. Clamping surface is smooth.

Max. Screw Lg.	Holding Cap., lbs.	Screw Dia.

Mini Brass Bar Clamps

When other bar clamps are too big, these miniature clamps handle the job. Include thumbwheels and wing-nuts for easy adjusting. Clamps are made entirely of brass for corrosion resistance, durability, precision, and appearance. Clamping surfaces are smooth to prevent marring. Not rated for holding capacity.

Opening Max.	Opening Min.	(A)	O'all Lg.

Welders' Cast Iron Bar Clamps

With a copper-plated steel screw, wing-nut handle, and swivel pad for weld spatter and flux resistance, these cast iron clamps are the perfect choice for welders. They also have a malleable iron head that slides along the steel bar and holds at any position. Clamping surfaces are smooth to prevent marring.

Adjustable-Angle Bar Clamps

Also called handscrews, these clamps have jaws that tilt to accommodate odd shapes and parallel work. The screws turn independently and are threaded into pivoting nuts to allow the jaws to move in and out or at an angle.

Spindles and nuts are cold-drawn steel; screw handles are made of hardwood with steel ferrules. Jaws are hard maple with an oil finish and have smooth clamping surfaces to prevent marring delicate workpieces.

Parallel Bar Clamps

These clamps include a spring clip and retaining ring to keep jaws parallel when opening. Use during tapping, drilling, and other machine setups. Screw heads are drilled to allow use of a pin for better tightening. Clamps are made of case-hardened steel. Clamping surfaces are chamfered for clamping under shoulders and in recessed areas. Not rated for holding capacity.

Sure-Joint Fastener Clamp

Create a secure joint between two pieces of wood without glue. Clamp installs permanently into the two pieces of wood, yet can be easily separated. Use on any 3/4″-thick panels, boards, or countertops. Clamp is made of zinc-plated steel and is set into your workpiece below the surface when installed.

Clamping size is adjustable from 2″ to 3 1/2″ center to center. The draw bolt is 4 1/16″ long. Box includes 25 clamps, a boring bit for drilling 7/8″ Dia. × 5/8″ Dp. holes, a guide to ensure correct installation, and a tightening tool. Not rated for holding capacity.

5079A55 ..... Box $53.65

Build-Your-Own Bar Clamps

Fixed-Head Bar Clamp with Crank Handle shown with Optional Clamp Mounts

Sliding-Head Bar Clamp

Just add a pipe to create these customized clamps, also known as pipe clamps. Clamps require a minimum pipe length of 12″; the pipe must be threaded at both ends. Pipe is not included. All have smooth clamping surfaces to prevent marring. Protective pads can also be used to provide a cushion between the clamp and your work surface (see 5156A sold separately on this page). All have a steel screw and are made of malleable iron with a powder-coated finish, unless noted.

***Fixed-Head Bar Clamps*—**Just slide the moveable jaw into position and turn the handle on the fixed head to apply final clamping pressure. Clamp *with crank handle* has an enamel finish.

***Sliding-Head Bar Clamp*—**All adjustments are made with the sliding head; the other end is stationary and flush with the pipe end, making it ideal for confined spaces. Clamp has a wing-nut handle.

***Optional Clamp Mounts*—**Have a thumb screw for holding 3/4″ pipe. Set includes four mounts. Each mount has two 5/16″ holes for mounting; hardware is included.

Protective Pads for Bar Clamps

Soft, durable plastic pads slip over the clamping surfaces of bar clamps and pipe clamp fixtures to protect finished surfaces. Pads fit clamping surfaces 1 1/2″-1 3/4″ Wd. × 2″ Ht. × 1/4″ Thick. Overall size is 2 1/4″ Wd. × 2 1/8″ Ht. × 1/2″ Thick; they may be trimmed. Set contains four pads.

5156A11 ..... Set $5.12

Easy-Tighten Band Clamps

Light Duty with Twist Handle

Light Duty with Ratchet Handle

Heavy Duty

An easy-to-tighten band encircles and holds round and odd-shaped objects with even pressure. A lock holds and releases the band.

***Light Duty*—**Clamps are metal and plastic with 1″ wide band. Include four removable jaws. To tighten clamps either turn the *twist handle* or squeeze the grips on the *ratchet handle*. Not rated for holding capacity.

***Heavy Duty*—**Clamps are iron with 2″ wide band. To tighten clamps simply turn the crank handle.

Corner Clamps

Light Duty

Heavy Duty

Perfect for gluing, welding, soldering, and other assembly operations.

Light Duty— An economical choice for holding lightweight, angled pieces. All are adjustable, which allows you to make miter and butt joints at any angle from 0° to 180°. Made of die cast aluminum. Clamps have a sliding-pin handle and two 5/32″ dia. holes in the base for mounting to your workbench (fasteners not included).

Heavy Duty— Align and hold heavy parts at a 90° angle for easy welding and soldering. The inner jaw pivots to allow simultaneous clamping of materials with unequal thicknesses. Made of cast iron with a painted finish. Clamps have a sliding-pin handle, a screw that's copper plated for protection from weld spatter, and two 7/16″ Wd. × 2 1/2″ Lg. slots for mounting (fasteners not included).

Magnetic Quick Clamps

Economy

Heavy Duty with T-Handle

Heavy Duty with Magnetic-Release Switch

Hold ferrous metals for welding, brazing, and assembly jobs. All clamps, except *heavy duty with magnetic-release switch*, have mounting holes so you can build the clamp into a jig or bolt several together for a stronger hold.

Economy Clamp— Has a compact design that's great for small jobs. Will hold work at 30°, 45°, 60°, 75°, 90°, and 180° angles.

Heavy Duty Clamps— Magnet is completely enclosed to prevent damage from oil, dirt, and dust. Will hold work at 45°, 90°, and 135° angles (unless noted). *Clamp with T-handle* quickly disengages the magnet from your workpiece. *Clamps with magnetic-release switch* allow for the easiest placement and release. Hold work at 45° and 90° angles.

Heavy Duty Three-Axis Corner Clamp

Shown with a bar in each axis.

Now you can hold a workpiece in the third axis—ideal for quick set-up and welding. Clamp aligns and holds up to three heavy parts at 90° angles. Plus, making adjustments couldn't be easier, simply press a button to rapidly move the threaded hold-down spindles in or out. The third-axis clamping arm swings out of the way for easy material removal. Clamp is steel and cast iron with copper-coated screws that resist weld spatter, and it has two 1 1/2″ × 7/16″ mounting slots (fasteners not included).

Pipe-Welding Chain Clamps

Straight

Flange

Adjustable

The combination of support bars and chain allows these versatile clamps to hold a wide range of pipe sizes. Unlike other pipe clamps that only allow tack welding, the open design of these clamps permits welding around almost the entire circumference. Clamps resist strain, heat, and abuse while keeping perfect alignment. Not rated for holding capacity.

Aluminum clamps are lightweight for easier handling than the *malleable iron clamps*.

Malleable iron clamps handle heavy duty clamping jobs.

Pipe OD Range	Aluminum		Malleable Iron	
Straight— *For two lengths of straight pipe and for eccentric reducers*				
1/2″-8″	5053A1	$164.00	5053A2	$149.00
8″-16″	5053A3	327.00	5053A4	310.00
Flange— *For standard or extra-heavy neck flanges to straight pipe*				
2 1/2″-8″	5053A5	229.00	—	—
Adjustable— *For straight pipe, elbows, tees, angles, reducers, and risers*				
2 1/8″-8″	5053A7	484.00	—	—

Expansion Clamps

Clamp with Key

Also known as quoin and wedge clamps. Just insert the T-handle key (sold separately below) and twist—clamps expand evenly along the long edge to hold small workpieces firmly in place. They expand from approximately 11/16″ wide to 27/32″ wide.

They're ideal for a variety of applications including letterpress setups. Made of steel.

Clamp Length	Clamp Height		
3″	11/16″	5003A12	$78.50
9″	11/16″	5003A21	91.92
T-Handle Key		5003A34	41.91

Spring Clamps

Quick and easy, simply squeeze the handles to open and a spring closes the jaws automatically. The jaws are parallel when fully opened (except steel wire clamp) and are contoured to accommodate both curved and flat objects. All have a tempered steel spring, except 50065A21, A22, and A23, which have a music wire spring and 4954A21, A24, and 6105A24, which have a 300 series stainless steel spring.

(1-3) Nickel-Plated Steel— Offered plain, with orange polyvinyl padded tips, and with orange polyvinyl padded grips and tips.

(4) Type 316 Stainless Steel— Corrosion resistant and good for plating and anodizing applications. With plain tips and vinyl padded grips.

(5-9) Plastic— Clamps with *molded grips and plastic tips* have jaw ends that pivot for extra flexibility. *Corrosion-resistant clamp* has a fiber-reinforced body for extra strength. Ideal for plating and anodizing applications. *Adjustable-force clamp* has a screw to adjust spring force from 1 to 50 lbs. of pressure. Clamps are glass-filled nylon and have soft, pivoting jaw pads. *Extended-reach clamp* has extra long and narrow arms for confined spaces. Includes nonslip grips and tips. *Pistol-grip clamp* is great for overhead work. Has a fold-up clasp that rotates 360°, pivoting jaw ends, and a nonslip grip.

(10) Steel Wire— Has pointed tips to bite into workpiece, ensuring a strong grip. Ideal for awkward shapes or a mitered corner. Use with most nonmetallic materials, such as wood, plastic, and leather. Clamp is made of alloy spring steel. The *clamp pliers* make them easier to open. Pliers are aluminum with cushion grips. Size is 6½″ long.

Spring Clamps with Flexible Arm

Need an extra hand to hold a flashlight, tools, or instructions? These clamps handle the job. They're steel with a flexible, nickel-plated tube. Clamping surfaces have smooth rubber tips to prevent marring. Not rated for holding capacity. ***Dual clamp*** has a clamp on each end. ***Magnetic base clamp*** has a clamp on one end and a magnetic base on the other.

	Opening Max.	Opening Min.	(A)	Clamping Surface Wd.	O'all Lg.		
Dual	2″	0″	2¼″	1″	25″	**50855A65**	$34.12
Magnetic Base	2″	0″	2¼″	1″	22″	**50855A66**	34.12

Mini Spring Clamps

(11-14) High-temperature clamps withstand temperatures up to 700° F. Clamps are 17-7 PH stainless steel with an Inconel X-750 spring. All have a smooth clamping surface to prevent marring.

(15) Soft-jaw clamp has smooth, rubber-padded jaws to hold work firmly but gently. Great for small parts. Made of corrosion-resistant, zinc-plated steel with a zinc-plated steel spring. Handle has a ¼″ dia. hole on one side and an ⅛″ dia. hole on the other for mounting (fasteners not included).

(16) Antistatic clamp is made of nonconductive, fiberglass-reinforced nylon with a tempered steel spring. It's chemically inert to most solvents. Ideal for clean rooms and PC board applications. Has ¼″ dia. hole in each handle for grounding. Clamping surfaces are serrated.

(17) Locking clamp has a cam lever that locks quickly and securely onto sheet metal, plastic, fiberglass, and other flat stock. Made of corrosion-resistant, zinc-plated steel with smooth neoprene pads that apply uniform pressure to prevent marring delicate materials.

(18) Adjustable locking clamp allows you to adjust opening size by turning the lever—just press the lever down to lock the clamp in place. Securely holds paper, plastic, sheet metal, and many other thin materials. Made of corrosion-resistant, zinc-plated spring steel with smooth neoprene pads to protect delicate surfaces from damage. Has two mounting holes that require #5 wood screws or ⅛″ dia. rivets (not included).

(19) Corrosion-resistant clamp is made of 300 series stainless steel and is nonstick. Ideal for corrosive environments and soldering. Clamping surfaces are smooth to prevent marring. Comes in a package of 6.

Plier-Activated Mini Spring Clamp Systems

These spring-loaded clamps are smaller and quicker to use than standard C-clamps. Grip sheet material for gluing, fastening, riveting, and soldering. Several of them can be used together. Made of steel with a steel spring. Require special pliers (sold separately) for positioning and removal.

(1) Edge-Grip Clamps— Use to grip the edges of the workpiece.

Opening Max.	Opening Min.	Jaw Depth	Holding Cap., lbs.	Overall Length		
1/2″	0″	1″	100	2 1/2″	5099A41	$4.06
3/4″	0″	1″	100	2 1/2″	5099A44	4.06

(2) Hole-Grip Clamps— Use in drilled holes to grip and align material. Use with workpieces up to 1/4″ thick. Holding capacity is 50 lbs.

Fits Hole Dia.	Drill Size	O'all Lg.		
3/32″	#40	2 5/16″	5099A29	$1.47
1/8″	#30	2 5/16″	5099A32	1.47
5/32″	#20	2 5/16″	5099A34	1.36
3/16″	#10	2 5/16″	5099A33	1.47
1/4″	1/4″	2 5/16″	5099A31	3.34

(3) Pliers— Required for positioning and removal of clamps. Pliers have comfort grip handles and are made of drop-forged, carbon steel with a black-oxide finish. Overall length is 7 1/2″.
5099A51 ..... $9.95

Clamp Set— Includes pliers, two 1/2″ edge-grip clamps, one of each size hole-grip clamps except 5/32″, and a plastic case.
5099A21 ..... $34.67

Edge-Grip Clamp Set— Includes pliers, six of each size edge-grip clamps, and a plastic case.
5099A25 ..... $70.13

Hole-Grip Clamp Set— Includes pliers, 10 of each size hole-grip clamps, and a plastic case.
5099A27 ..... $71.70

Multiposition Clamping System

Create a clamping system for lightweight holding in the lab and shop. Components sold separately. First select a base, then select the appropriate number of rods. You can join two rods together at a 90° angle with a stainless steel connector. Finally, select the clamp(s). Clamps require a stainless steel or a nylon connector for attachment to rods. Not rated for holding capacity.

Bases

Single Rod— Base is nylon and 2 1/2″ dia. Includes a thumb screw to secure a 1/2″ dia. rod and three 1/4″ dia. mounting holes.
50165A11 ..... $9.46

Multirod— Base is nylon and 6″ Wd. × 9″ Lg. Holds four 1/2″ dia. rods. Includes two locking thumb screws.
50165A12 ..... $67.36

Rods

Rods are 1/2″ dia., corrosion-resistant Type 304 stainless steel with sealed ends.

Length		
6″	50165A21	$18.91
10″	50165A22	22.45
20″	50165A23	30.73
24″	50165A24	34.27

Connectors

Nylon— Has good resistance to chemicals. Use to connect a clamp to a rod. It has two thumb screws for fastening.
50165A31 ..... $8.27

Type 304 Stainless Steel— Is corrosion resistant. Use to hold two rods together at a 90° angle, as well as to connect a clamp to a rod. Has two wing-nut screws for fastening.
50205A6 ..... $42.33

Burette Clamp

Clamp is corrosion-resistant Type 304 stainless steel with rubber nonmarring pads. Opening size is 1″ max., 0″ min.; turn the wing-nut screw to adjust. Overall length is 10″. Requires a connector for attaching to a rod.
50205A61 ..... $62.17

Clamps

Clamps are made of reinforced nylon, so they won't mar delicate surfaces. Opening size is adjusted by turning a thumb screw. Clamps require a connector for attaching to a rod.

Opening Max.	Opening Min.	Stem Lg.	With Stem		Without Stem	
5/8″	0″	5″	50165A41	$39.99	50165A51	$31.91

3 1/3″	1/8″	6″	50165A43	61.02	50165A53	47.15

Mini Spring Clamp Systems

Keep your hands free to work—these clamps are mounted to swivel arms attached to a base. Great for soldering, gluing, and assembling applications. Clamps are rust-resistant, nickel-plated steel. Maximum jaw opening is 1/2″; minimum jaw opening is 0″; throat depth is 3/4″. Not rated for holding capacity.

(4) Single-clamp system has a spring clamp on a 2″ arm; holds small objects securely at any angle. ***(5&6) Double-clamp systems*** have two spring clamps mounted on a 5 1/2″ adjustable cross arm. Offered with and without a 2 1/2″ dia. magnifier mounted on a third arm. ***(7) Triple-clamp system*** has two spring clamps and a self-locking tweezer mounted to 6″ and 12″ adjustable rails and blocks.

4	Single-Clamp System	5007A11	$12.00
5	Double-Clamp System	5007A12	18.00
6	Double-Clamp System with Magnifier	5007A14	26.40
7	Triple-Clamp System	5007A28	47.98

Temporary Joint Clamps

Commonly called pinch dogs, these clamps are driven into wood to hold joints together while glue is setting. They're made of steel and are reusable. Not rated for holding capacity.

Length		
1″	92187A212	$5.14
1 1/2″	92187A214	5.14
2″	92187A215	5.63
3″	92187A218	6.87

Fast-Action Clamping Handles

When connected to a rod end or swing bolt (not included), the double-cam design of these handles allows for quick clamping. They're made from heat-treated steel with a black-oxide finish that provides corrosion resistance when used in indoor applications only. The bore is precision reamed.

Bore (B)	(C)	(D)	(E)	(F)	(G)

♣ Includes a no-pinch, fast-release cushioned grip.

Heavy Duty Plier Clamps

Odd-shaped items are no problem for these rugged clamps. Constructed of nickel-plated steel, both have a sliding-head design for easy size adjustment. An adjusting screw changes the angle of the jaws up to 7° for clamping tapered parts. Just squeeze the handle to lock the clamp; fingertip pressure on the release trigger opens the clamp. Include removable plastic pads for holding delicate items. Clamping surfaces are smooth.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	O'all Lg.		
4″	0″	2″	440	10¼″	**5047A21**	$69.67
8″	0″	2″	440	10¼″	**5047A22**	79.69

Vise-Grip Plier Clamps for Sheets

Get a secure grip on thin sheets and panels with the finger-shaped clamping points on these clamps. Adjust the opening size by turning the knob, then squeeze the handle to lock the clamp in place. Fingertip pressure on the release trigger opens the clamp. Clamps are made of nickel-plated steel and have smooth clamping surfaces.

Welding clamp grips sheet metal, bars, pipe, and parts.

Panel clamp's bottom jaw moves forward to clamp panels and sheets at a 90° angle.

Clamp	Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	O'all Lg.	Mfr. No.

Rapid-Action Plier Clamps

4972A1 *4972A2*

Ratchet action gives you a rapid-adjusting, positive-clamping force and a secure hold. A release trigger opens clamps instantly. Clamps have plastic-covered handles and reinforced-nylon jaw pads to prevent marring and are not rated for holding capacity. Pads swivel for use on uneven surfaces (unless noted).

Opening Max.	Opening Min.	(A)	O'all Lg.	Clamp Material		
2″	1/16″	2⅜″	8¾″	Reinforced Nylon	**4972A1**	$4.96
2¾″	1/16″	3⅝″	9⅞″	Reinforced Nylon	**4972A2**★	4.96

★ Pads do not swivel.

Long-Reach Plier Clamps

Extra-deep jaws allow you to clamp around large items. Just turn the adjustment knob to set the jaw opening to the size you need and squeeze the handle to lock the clamp in place. Clamps are made of steel and open quickly with a touch of the release trigger. The clamping surfaces are smooth. Not rated for holding capacity.

Max. Opening	Min. Opening	(A)	O'all Lg.		
3 15/16″	0″	19¾″	26 31/32″	**5058A41**	$99.74
6½″	0″	31½″	38 25/32″	**5058A45**	135.82

Right-Angle Toggle Plier Clamp

Weld or bolt to a fixture anywhere along this forged-steel clamp's frame, then push the PVC-coated handle down for quick clamping. Handle has a fast-acting trigger release. The jaw tilts back 86° to easily remove workpiece. Has swivel-foot spindle that's M10×3″ Lg. Minimum clamping thickness varies depending on how you mount the clamp. Maximum opening is the maximum distance that spindle face and mounting surface remain parallel.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs	O'all Lg.		
10⅛″	0″	2 11/16″	800	10 55/64″	**5149A71**	$80.37

Quick-Grip Plier Clamps

Simply squeeze the handle for quick clamping. To release the clamp, just apply fingertip pressure to the trigger. Clamps are made of lightweight resin with nonmarring swivel pads for holding odd-shaped items.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	O'all Lg.		
1½″	0″	1½″	25	4¾″	**5070A11**	$5.10

4″	0″	3″	25	9½″	**5070A16**	10.23

Base-Mount Plier Clamp

Clamp mounts to most drilling tables and workbenches for convenient use in almost any position. It has an offset handle that locks closed when squeezed and opens with a release trigger. Includes an adjustment knob to change the opening size and a swivel pad to hold tapered work and irregularly shaped parts. Clamp is steel with five ⅜″ dia. mounting holes. Not rated for holding capacity.

Opening Max.	Opening Min.	(A)	Holding Cap., lbs.	O'all Lg.		
4″	0″	3½″	—	11 13/16″	**4987A84**	$57.69

Plier Clamp with Portable Base

A portable base allows this steel clamp to be easily removed. Use it as a tabletop clamp or rout the base plate into your work space for a flush-mount surface. The clamp has a locking plier grip, swivels 360°, has a steel jaw with a plastic nonmarring pad, and can be removed from the keyhole slot in the base. Made of steel. Not rated for holding capacity. The base plate is 10″ Lg.×10″ Wd.×¼″ Thick. and includes mounting fasteners.

Opening Max.	Opening Min.	(A)	O'all Lg.		
3¾″	0″	3⅛″	11½″	**5060A11**	$56.23

5 Double Neoprene-Tipped Spindle

9

Portable handheld clamps are ideal for fast, positive-lock clamping where stationary toggle clamps can't be used. Clamps are made of forged alloy steel (unless noted) and won't deform under clamping pressure. The spindles are threaded to easily adjust for workpiece thickness.

Use *PVC-tipped* and *neoprene-tipped* spindles to prevent marring the workpiece; *hex head cap screw* spindles for heavy duty clamping applications. For replacement neoprene-tipped spindles, see page 2593. For replacement hex head cap screw spindles, see pages 3134-3159.

(1-5) Standard— Open by pulling handles apart. *Style 2* is made of steel with spring steel jaws.

(6-8) Trigger Release— Open by pulling the two-way trigger up or down. The bottom jaw on *Styles 7* and *8* releases to swing in the open position.

(9) Right Angle— For use when space is restricted. Open by pulling handles apart.

★ Maximum distance that spindle faces remain parallel. ▲ Handle has vinyl grips.
♠ Has swivel-tip spindle. ● Has one hex head spindle; one swivel-tip spindle.

Heavy Duty Hold-Down Toggle Clamps

Standard

Auto Adjusting

High holding capacities and rugged, solid steel construction make these clamps perfect for your most demanding applications. Toggle clamps offer exceptional clamping force with minimal hand pressure and can be used in any position. Pressure on the handle forces clamp down on the workpiece. Handle is vertical when clamp is engaged. When disengaged, arm opens a minimum of 90° for easy work removal, unless noted. Both illustrations show clamps in engaged position.

Solid arm allows for the addition of spindle (not included) or other clamping device at any point along the arm for flexible clamping options. Clamps are screw mount.

Standard clamp has a vinyl-covered handle for a comfortable grip.

Auto-adjusting clamps compensate for slightly different heights of workpieces while maintaining proper clamping pressure so you'll need to make fewer adjustments.

♥ When disengaged, arm opens 80°.

Hold-Down Toggle Clamps for Angled Surfaces

Pivoting jaw keeps the clamping surface parallel with the angled surfaces on the workpiece. Jaw also moves out of the way to provide clearance for work positioning. Mount on drill presses, milling tables, and workbenches (mounting hardware is not included). Made of steel with a copper-plated screw and zinc-plated body and frame.

Hold-Down Toggle Clamps

Exceptional clamping force with minimal hand pressure makes these clamps a favorite in milling, drilling, and welding. Pressure on the handle activates downward force on the workpiece. Clamps can be used in any position. When mounted to a horizontal surface, the handle is vertical when clamp is engaged. When disengaged, the spindle arm opens a minimum of 90° for easy workpiece removal. All illustrations show clamps in engaged position.

Clamps have vinyl-covered handles for a comfortable, sure grip. All have a steel hex head cap screw spindle (great for heavy duty work and welding), except those marked with a ♦ which have a molded neoprene-tipped spindle (nonmarring), with a ★ which have a hex head cap screw spindle with PVC cap, or with a ♣ which have a hex head cap screw spindle with neoprene cap. For replacement hex head cap screw spindles, see pages 3134-3159. For replacement neoprene-tipped spindles, see page 2593.

Open Arm for Spindle Positioning—Spindle moves easily to any position along the U-shaped arm.

Double locking have a locking lever to keep the spindle arm in the locked position. Lever must be released before the clamp can open. Ideal for high-vibration and overhead applications. ***Auto adjusting*** compensate for varying thicknesses of workpieces while maintaining proper clamping pressure. ***15° angled arm*** swings farther away from the workpiece, allowing easier removal of parts from the fixture.

Cut-to-Length Solid Arm with Weld-On Spindle Holder—Use as is, or cut arm to desired length and weld the spindle holder (included) to the end of the arm for custom work-holding applications.

♦ Has molded neoprene-tipped spindle. ★ Has hex head cap screw spindle with PVC cap. ♣ Has hex head cap screw spindle with neoprene cap.
● Can also be mounted using 5/16" dia. mounting holes. (G) is 1 1/4" and (H) is 1 3/4". ♥ Cam action allows workpiece thickness variation of 5/16".
✓ Cam action allows workpiece thickness variation of 7/16".

Low-Profile Hold-Down Toggle Clamps

Base Styles

Get the same fast clamping action of hold-down toggle clamps with the advantage of greater clearance over the workpiece. When mounted to a horizontal surface, handle is horizontal when clamp is engaged. When disengaged, spindle arm opens a minimum of 90° for easy workpiece removal. All illustrations show clamps in engaged position.

Clamps have a U-shaped, open spindle arm—spindle can be moved to any position along the arm (unless noted). They also have vinyl-covered handles for a comfortable, secure grip (unless noted). All have a hex head cap screw spindle (great for heavy duty work and welding), except those marked with a ♦ which have a molded neoprene-tipped spindle (non-marring). For replacement hex head cap screw spindles, see pages 3134-3159. For replacement neoprene-tipped spindles, see page 2593.

Double-Locking Clamps—A locking lever keeps the spindle arm in the locked position and must be released before the clamp can open. Ideal for high-vibration and overhead applications.

Extra Hand-Clearance Clamps—Allow extra clearance between the spindle arm and the handle when clamp is fully open.

● Has nylon hex spindle tip. ★ Has solid spindle arm (not illustrated). Spindle position is not available. ♦ Has neoprene-tipped spindle.
♥ Has PVC-tipped spindle. ◢ Has hex head cap screw spindle with PVC cap. ■ Handles are not vinyl covered.

Compact Hold-Down Toggle Clamps

Big things do come in small packages. These clamps have exceptional holding power for their size and are ideal for circuit boards, gluing, assembling, and light machining. Include a low-profile handle with vinyl grip. Spindle can be easily moved to any position along the open-style arm. Have a neoprene-tipped spindle, unless noted. For replacement neoprene-tipped spindles, see page 2593. For replacement hex head cap screw spindles, see pages 3134-3159.

Double-Locking—Built-in lock/release lever prevents accidental openings.

♠ Has hex head cap screw spindle. ♣ Has hex head cap screw spindle with slip-on neoprene cap.

Dual-Mount Hold-Down Toggle Clamps

Why be forced to choose between vertical or horizontal mounting? These versatile clamps feature a dual-mount base for mounting either way. When the clamp is disengaged, the clamping arm completely clears the work area to provide more room for loading and unloading parts. Handle extends 2" below the base when clamp is engaged. Illustration shows clamp in engaged position.

Clamps have a U-shaped, open spindle arm and a spindle which easily moves to any position along the arm. Made of steel with a vinyl-covered handle for a comfortable, secure grip.

Neoprene tip spindle has a 5/16"-18 × 3" Lg. screw. *Hex head* spindle has a 5/16"-18 × 2 3/4" Lg. screw.

For replacement neoprene-tipped spindles see page 2593. For replacement hex head cap screw spindles, see pages 3134-3159.

360° Rotating Hold-Down Clamps

Easy to set up and position—clamps rotate 360° around the mounting bolt and mount anywhere on a bench or table top. Include sliding-pin handle, swivel pad, all mounting hardware, and baked-enamel finish. Made of malleable iron.

Clamp with machine bolt has a slot in the clamp's base for a 3/8"-16 × 3 1/2" Lg. machine bolt (included). Clamp is 5 1/2" Lg. × 2 1/4" Wd. × 6" Ht. ***Clamp with T-slot bolt and machine bolt*** includes a 8 1/8" Lg. T-slot bolt and a 5/8"-11 × 9" Lg. machine bolt—both slide through the frame for mounting. Clamp is 7 1/2" Lg. × 2 3/4" Wd. × 9" Ht.

Mounting Bolt Style	Holding Cap., lbs.	Opening Max.	Opening Min.	(A)	Screw Dia.

Variable Fast-Action Plunger Clamps

Ideal when quick clamping action is needed and there are large size variations between clamped pieces. Push the plunger forward until it contacts the workpiece, then rotate the locking lever handle to apply clamping force and lock the plunger. Mounting base is aluminum, knobs are plastic, and all other parts are steel. The ***base-mount*** clamp mounts to a flat surface; drill a hole to mount ***flange-mount*** clamp into surface.

Push/Pull-Action Toggle Clamps

Fast, push/pull clamping action is perfect for assembly areas, machining, and welding. All can be used as push-action clamps. Clamps that lock in extended and retracted positions can also be used as pull-action clamps—simply move handle in the opposite direction.

Plungers are drilled and tapped to accommodate standard threaded spindles (not included, unless specified) and other threaded fixtures. For hex head cap screw spindles, see pages 3134-3159. For neoprene-tipped spindles, see page 2593.

Clamps are steel (unless noted). Cast bases are more durable than formed while forged are more durable than cast. Unless noted, handles are vinyl covered for a comfortable, secure grip. All illustrations show clamps in extended (engaged) position.

Forward-Action Handle— Moving handle forward moves plunger forward; clamps lock in position at the end of travel.

(1) Our smallest push-action toggle clamps are ideal for electronics and other light duty work. Lock in extended and retracted positions. 5093A55 has a nylon spindle assembly, 5093A68 has a hex head cap screw spindle, 5093A41 has a neoprene-tipped bonded spindle assembly, and 5093A54 has an externally threaded 1/4″-20 plunger tip.

(2) General purpose clamp. Locks in extended and retracted positions.

(3) These low-profile clamps are easy to work with in tight and restricted areas. Lock in both extended and retracted positions.

(4) Maximum capacity for their size. Lock in extended and retracted positions. 5093A75 has a square plunger that resists rotating forces.

(5) Base is extra narrow—perfect where other clamps won't fit. Locks in extended position only.

(6) Exerts 800 lbs. of force during travel of the plunger and 1,200 lbs. when locked. Locks in extended position only.

(7) Super duty clamp offers the greatest holding capacity. Locks in extended and retracted positions.

(8) Clamps have a larger handle pad than the other clamps, so they're more comfortable to use. Lock in extended position only.

(9) Low-profile clamps for tight clearances. Lock in extended and retracted positions.

Reverse-Action Handle— Moving the handle back (or downward) moves plunger forward; clamps lock in position at the end of travel.

(10) These fully retractable clamps have threads at the base of the plunger—can be mounted through a panel with a jam nut on the work side, or drill and tap a hole for flush mounting. Lock in extended and retracted positions.

(11) General purpose clamp. Locks in extended position only.

(12) When clamp is engaged, the handle is in a near horizontal position. Good for areas where the handle would normally cause interference. Locks in extended position only.

Double Locking— Built-in lock/release lever prevents accidental openings. Good for high-vibration and overhead applications. Offered in *Styles 3, 8,* and *10*.

Replacement Spindle Components for Toggle Clamps

Replace worn parts or customize your clamps. For replacement hex head cap screw spindles, see pages 3134-3159.

(A-D) Spindles

Replace hex head spindles, as well as spindles with push-on or screw-on caps. All include two hex nuts.
(A-C) Neoprene Tipped—Prevent marring. Tips are bonded to threaded spindles.
(D) Steel Swivel Tip—Ensure positive contact with workpiece.

Spindle Caps

Caps give a tight, nonmarring grip on delicate surfaces that could be damaged by hex head spindles. They also compensate for slight variations in material thickness. ***Push-on caps*** slip over the hex head of a bolt-style spindle. ***Screw-on caps*** have internal threads and screw onto the headless end of a spindle.

Pull-Action Toggle Clamps

Pull handle back to pull the draw arm back—ideal for clamping lids and doors to drums, containers, and molds. There are four types of draw arms: U-bolt (*Styles 1-3*), J-hook (*Style 4*), latch (*Style 5*), and threaded spindle (*Style 6*). All clamps except *Style 5* allow you to adjust the length of the draw arm (unless noted). *Styles 1-3* include a latch plate (unless noted; latch plate sold separately below). All handles are vinyl covered (unless noted). Stainless steel clamps are 300 series stainless steel.

Double-locking clamps prevent accidental openings with a locking lever that keeps the draw arm in the locked position until released. Perfect for high-vibration and overhead applications.

180° (Horizontal) Clamps— Hold two flat surfaces together. Ideal for doors, two-piece molds, and other pressure vessels.

90° (Perpendicular) Clamps— Secure workpieces that are at right angles to each other, such as lids to containers and covers to drums.

✓ Does not include latch plate. ★ Handle is not vinyl covered. ♣ Latch plate has two mounting holes.
♠ Maximum length when draw arm is engaged. ■ Length of draw arm is adjustable. ▲ Spindle is 3 5/8" long and includes four nuts.

Hold-Down Toggle Clamps for Lids and Containers

No more leaks and spills, simply weld or bolt these clamps onto lids and containers to keep them shut tight. Also great for sheet metal work and as temporary fixtures. Clamps have a forged steel jaw that moves 90° away from the work surface for easy access.

For replacement hex head cap screw spindles, see pages 3134-3159. For replacement neoprene-tipped spindles, see page 2593. Maximum opening is 1 25/32", overall length is 8 45/64", overall width is 2 15/16", and the spindle screw size is M12×1.75, unless noted.

300 Series Stainless Steel Clamp	800	5112A15	77.33	—	—

♦ Overall length is 9 55/64" and spindle screw size is 1/2"-13.

Air-Powered Toggle Clamps

Base for Hold-Down Clamps

Hold-Down Clamp 5174A

Hold-Down Clamp 5129A

Base for 5137A51 & 5137A53

Base for 5137A52

Push/Pull-Action Clamp

Reduce operator fatigue and increase productivity with these air-powered clamps. Simply use fittings with appropriate threads (not included) to connect the clamp's two female ports to a control valve and an air line. Clamps lock against the workpiece and maintain the full-rated holding capacity—even a total loss of pressure won't cause them to open. Multiple clamps can be used simultaneously or sequentially. Illustrations show clamps in engaged position.

Made of steel with an operating temperature range of 14° to 194° F, unless noted. For repl. hex head cap screw spindles, see pages 3134-3159. For repl. neoprene-tipped spindles, see page 2593.

Hold-Down Clamps

When clamp is disengaged, spindle arm opens a min. of 88° for easy workpiece removal. Spindle moves easily to any position along the U-shaped, open spindle arm. 5174A35 and 5129A21 have a molded neoprene-tipped spindle; 5129A22, 5129A23, and 5129A24 a hex head cap screw spindle.

★ Operating temperature range is –20° to +150° F.

Push/Pull-Action Clamps

For repetitive machining operations, pressure testing, gluing, and whenever side clamping may be desired. Plunger end is drilled and tapped to accommodate standard threaded spindles and other threaded fixtures (not included). Clamps lock in extended position only.

Air-Powered Swing Clamps

Relax and let the clamp do the work. These air-powered clamps provide quick swing-and-clamp action, exerting the exact force required for your application without damaging delicate parts. Ideal for repetitive clamping situations and for reducing operator fatigue. Use fittings with standard threads (not included) to connect the clamp's ports to a control valve and an air line.

The clamping arm has two motions each time it engages. First it rotates 90° to a position over the workpiece and travels down to a preclamp position. Second, it moves straight down to clamp the workpiece (vertical clamp stroke). The swing of the arm provides unobstructed loading and unloading of the workpiece. The downward clamp stroke allows for various workpiece sizes, since it adjusts for inconsistencies every cycle. (Right-swinging arms swing to the right as they disengage; left-swinging arms swing to the left.) Illustrations show clamps in disengaged position.

Clamps are red anodized aluminum and operate at –40° to +250° F. Include a hex head cap screw spindle, unless noted. For repl. hex head cap screw spindles, see pages 3134-3159. For molded neoprene-tipped spindles, see page 2593.

Optional Mounting Block for Threaded-Body Clamps

Threaded-Body Clamp

Block-Style Clamp Base

Block-Style Clamp

Threaded-Body Clamps

Can be screwed into a tapped hole in the fixture, or, to allow easy resetting of clamp height, into a mounting block (sold separately below).

Setup Clamping Kits

Standard Kit with Metal Wall-Mount Holder

Never waste time looking for a clamp, block, stud, or nut again—these kits have a full array of them packed in an easy-access holder. Clamps and nuts are case-hardened steel with a black-oxide finish; blocks are pressed steel with a gray finish.

Kits include 24 studs—four each in 3", 4", 5", 6", 7", and 8" lengths or 80 mm, 110 mm, 140 mm, 150 mm, 175 mm, and 200 mm lengths (unless noted). Also include four T-slot nuts, four flange nuts, four coupling nuts, six step blocks, and six step clamps.

Standard kits with metal wall-mount holder include everything listed above plus a T-slot cleaner and two additional T-slot nuts and flange nuts (unless noted).

▲ Holder is plastic. ♠ Use with Bridgeport style milling machines.
● Does not include the two additional flange nuts.
■ Includes 125 mm studs instead of 140 mm studs.

Self-Positioning Iron Setup Clamps

The swivel rocker design of these clamps allows them to pivot to any position and self-adjust instantly within a wide clamping range. Simply secure through the center with a T-nut and stud (not included). Clamps are made of ductile cast iron. Clamps with short reach are great for close setups.

♦ Slot length is measured center-to-center.

For an index of fixturing components, see page 2596.

Adjustable Height Serrated Step Blocks

Not only do step blocks support clamps on machine beds, but they also have nonslip serrations for adjusting height in 1/8″ vertical and 1/16″ horizontal increments. Made of pressed steel with a gray finish. Sold in pairs of identical half blocks.

Blocks with Holes

Height Range	Ht. × Wd. × Dp.	Hole Dia.		Pair

Alignment Pins

Close tolerances (+0.0000″, –0.0010″) mean precision alignment of holes in mating pieces of material. Pins are ground, heat-treated steel with a black-oxide finish. Rockwell hardness is 58-64RR.

Forged Steel Wedges

Make quick height adjustments on planers, shapers, and milling machines with these durable forged steel wedges. Use in pairs for parallel adjustment. A U-shaped groove on the 5″, 6″, and 8″ wedges lets chips slide under the workpiece so they don't interfere with wedge adjustment.

♠ Use with Bridgeport style milling machines.

Plain and Step Clamps

These general purpose clamps are made of case-hardened steel with a black-oxide finish. ***Plain clamps*** mount to the top of a pair of step blocks or straddle over workpieces that have a mounting hole. ***Step clamps*** have one serrated end to fit into serrated step blocks.

Stud Size (A)	Lg. (B)	Wd. (C)	Ht. (D)	Slot Lg. (E) ♦	Edge to Slot (F)	Plain Clamps		Step Clamps

♦ Slot length is measured center-to-center.

Edge Holding Clamps

Also known as toe clamps, they securely grip a workpiece's edge while leaving its top surface free for milling, boring, and cutting. These low-profile clamps have a dual-action, serrated nose that exerts clamping force both downwards and at a 45° angle when tightened. Made of heat-treated steel with a black-oxide finish. ***Standard-grip clamps*** have taller nose height to increase contact with the workpiece for more holding power. Come with a removable aluminum nose cap that prevents damage to workpieces. ***Low-grip clamps*** grip close to the bottom of a workpiece for more clearance for machining.

Stud Size (A)	Lg. (B)	Wd. (C)	Ht. (D)	Slot Lg. (E) ♦	Edge to Slot (F)	Standard Grip Nose Ht. (G)		Low Grip Nose Ht. (G)

♦ Slot length is measured center-to-center.

For an index of fixturing components, see page 2596.

Swivel-Hook Clamps

Also known as swing or hook clamps, these clamps have a steel hook that rides on a spring-loaded socket head cap screw. This allows the clamp to hold workpieces securely, yet be swiveled out of the way for a quick release. The screw sets flush with the top of the clamp, permitting use in tight spaces. Clamp body is heat-treated steel. Great for a variety of jig and fixturing applications.

Set Screw Adjustable Height Serrated Grippers

A threaded body allows you to adjust gripper height. An internal hex opening is opposite the serrated face, so you can use a hex key to thread it into a hole. Made of carbide-tipped tool steel. Teeth are placed 0.125″ apart (unless noted).

Size (A)	Ht. (B)	Thread Size (C)	Hex Key Size

♠ Teeth are placed 0.094″ apart.

Low-Profile Clamps

Low-Profile Clamp

Just give the offset screw a half-turn and it presses the hex head against the workpiece. This simple design creates cam-action to quickly and effectively fasten components. Use these clamps in tapped holes. They have a hardened steel socket head cap screw with a black-oxide finish and a hexagonal brass hex head, except where noted.

Clamps are often used in conjunction with T-slot nuts (sold separately below). ***T-slot nuts*** have a lock-down screw to hold in the T-slot.

Low-Profile Edge-Gripping Clamps

Knife Edge *Blunt Edge*

Small, but strong, these tool steel clamps hold tight in vertical and horizontal clamping applications. Plus, they grip a workpiece's edge, keeping the surface free for milling, boring, and cutting.

Low-Profile Serrated Edge Grippers

Grippers have a serrated edge for extra gripping power and a slim body that is ideal for use in low-profile jig, fixture, and vise gripping applications. Attach to the top or sides of your fixture—a mounting hole lets grippers mount to the sides of fixtures. Mounting hole is counterbored for a socket head cap screw (not included). Made of high-speed tool steel. Teeth are placed 0.125″ apart (unless noted).

Square Size (A)	Thick (B)	*Mounting Hole* Fits Screw Size (C)	Counterbore Dp. (D)	Chamfer (E)

♠ Teeth are placed 0.094″ apart.

Hex Head Adjustable Height Serrated Grippers

Attach grippers to clamps, jaws, and other fixturing devices to increase their gripping power and prevent wear caused by gripping. Fully threaded body allows you to adjust the height of the gripper. Made of carbide-tipped alloy steel. Teeth are placed 0.125″ apart (unless noted).

♠ Teeth are placed 0.094″ apart.

For an index of fixturing components, see page 2596.

Serrated Grippers

Standard Round Gripper

Counterbored Square Gripper

Boost the gripping power of chuck jaws, clamps, and other fixturing devices by attaching these grippers. Made of high-speed tool steel. Tolerance for (A) and (B) dimensions is –0.005″. ***Standard*** have a threaded hole (unless noted) for fast mounting and replacement. Mount from rear using standard cap screw (not included). They also have flat notches on the side for set screw mounting. Thread size (C) is 10-32 (unless noted). *Carbide-tipped* has greater wearability in nonshock settings. ***Counterbored*** mount from front using a socket head cap screw (not included).

To Order Please specify fine or extra-fine pattern, except where noted. Fine has teeth spaced 0.125″ apart; extra-fine are 0.094″.

♦ Fits screw size #10.

Swivel Pads

Also known as toggle or swivel-foot pads, these pads apply uniform clamping pressure on uneven and angular surfaces. They are self-aligning, and tilt up to 10° to clamp against the workpiece. Thread them onto clamp bolts or studs that have a matching thread size. Choose from pads with a plain, serrated, and acetal bottom.

Serrated bottom improves the grip on rough surfaces. ***Acetal bottom*** won't mar soft metals or polished surfaces.

Steel— Have a steel nut and base with a zinc-plated finish.

Stainless Steel— Resistant to rust and corrosion, they have a Type 303 stainless steel nut and base.

Shoulder-Style Locating Pins

A shoulder on these pins resists force from above to keep the pins from being pressed through the fixture.

Use ***round pins*** and ***diamond pins*** to locate and align parts. Diamond pins have a four-flat diamond pattern that minimizes contact with workpiece to reduce sticking and jamming. When used together, round and diamond pins provide accurate locations from hole-to-hole on the workpiece.

Press-fit locating pins have a tapered end for an easy press-fit installation. Made of heat-treated, ground steel with a black-oxide finish. Rockwell hardness is C60-C64. Tolerance for dimensions (A) and (B) is –0.0005″.

Removable locating pins are also known as slip-fit and lockscrew locating pins. They're the perfect choice when you need to remove pins and reinstall them. Made of steel. Rockwell hardness is C74-C77. Tolerance for dimensions (A) and (B) is –0.0002″.

Here's a metric alternative to other locating pins. Use these round press-fit pins to locate parts. Made of steel. Rockwell hardness is C58. Use liners to keep pins from bending or wandering. To select a liner, choose any liner with the same diameter (F) as the locating pin diameter (A). All liners are steel with a Rockwell hardness of C60.

Liners sit flush in workpiece. ***Liners with shoulder*** resist force from above to keep the pins from being pressed through the fixture.

Bullet-Nose Aligning Dowels and Pins

Dowel

Round Pin

Diamond Pin

Liner

Install a dowel or pin in your jig plate and a liner in the tooling that holds the workpiece to keep fixtures and jigs aligned with other tool parts. Made of steel. Rockwell hardness is C60-C64.

Dowels— Have a long, tapered nose for easy entry into the liner. Tolerance for (A) dimension is –0.0005″; –0.0003″ for (B).

Pins— The pin shank diameter (B) and liner OD (X) are the same size, so fixture pieces can be drilled at the same time. Tolerance for (A) and (B) dimensions is –0.0003″. Use ***round pins*** and ***diamond pins*** to locate and align parts. Diamond pins have a four-flat diamond pattern that minimizes contact with workpiece to reduce sticking and jamming. When used together, round and diamond pins provide accurate locations from hole-to-hole on the workpiece.

Liners— Have a tolerance of +0.0004″ for (W) dimension; –0.0003″ for (X).

For an index of fixturing components, see page 2596. For information about spring plungers, see page 2602.

Tooling Balls

Determine hole centerlines and distances between hole centerlines, using tooling balls to establish a precise reference point for critical machining operations. Tool balls are also known as construction balls. Manufactured from one piece of heat-treated, hardened, ground alloy steel so that the ball won't dislodge from the shank. Balls have a ground-luster finish. Balls and shanks are concentric within +0.0002″. Tolerances for (A) and (C) dimensions are ±0.0002″. Rockwell hardness is C58-C62 (unless noted).

Shoulder tooling balls have a precision height-reference shoulder to locate the ball in three dimensions.

Install the ***shoulder ball with internal thread*** by inserting a cap screw (not included) into the 6-32×1/4″ deep tapped hole in shank and then pulling through a bushing or hole. The screw will pull the shank through bushing or hole without marring the ball or changing the ball's location.

Slip Fit—Slightly undersized for temporary mounting. Tolerance for (B) dimension is +0.0000″ to –0.0004″.

Press Fit—Slightly oversized for permanent mounting. Tolerance for (B) dimension is +0.0003″ to –0.0000″.

Tooling ball cover prevents jarring and bumping, protecting your tooling balls when not in use. Made of cast zinc alloy. Fits all balls listed here.

Flush-Mount Ball-Nose Spring Plungers

The collarless design on these spring plungers makes them ideal for a flush surface mount or when you won't need to remove the spring plunger. They have precise body diameter dimensions for press-fit installation. ***Single-ball*** plungers have a 300 series stainless steel body with Type 440 stainless steel ball and spring. ***Double-ball*** plungers have a ball at either end to provide spring-pressure connections at both ends. They have a knurled band around the middle and a brass body with Type 440 stainless steel balls and spring. The brass body can complete a circuit, making these plungers great for use in electrical applications such as a contact switch. For Push-Fit Ball-Nose Spring Plungers, see page 2603.

About Spring Plungers

Spring plungers can repeatedly project the plunger nose to apply accurate, consistent pressure to workpieces. Use them for positioning, locking, indexing, and ejecting. They can also function as a detent catch. *Ball-nose spring plungers* are more compact for higher strength in side-load applications. *Round-nose spring plungers* provide long travel ranges and smooth operation.

End Force— The pressure of the spring holds the plunger nose in place until acted upon by an *initial end force* (the force in pounds required to begin to retract the plunger nose). The nose can be depressed until it reaches *final end force* (the force in pounds required to depress the plunger nose so it sets flush with the end of the plunger body). The range of movement, or *travel*, of the plunger is equal to the ball projection or nose length. You can select the desired force or "feel" for your application. You can vary the side force required to release your component by changing the size of the detent hole or groove into which the plunger nose fits. Lighter end forces and smaller holes will release more easily, while heavier end forces and larger holes will increase the force required for release.

Thread-Locking Element— Most of our spring plungers can be ordered with a thread-locking element that compresses into the threads of a tapped hole to resist vibration and to eliminate the need for checknuts and thread-locking adhesives. Most ball-nose and round-nose spring plungers with thread sizes of 1/4″ or less have a bonded patch; most thread sizes greater than 1/4″ have a press-fit pellet. Hand-retractable spring plungers have a bonded patch regardless of size. It is not recommended for use on aluminum or other soft materials.

Catches for Ball-Nose Spring Plungers

Also known as ball buttons, these catches are the ideal mate for ball-nose spring plungers. A half-round indentation acts as a detent or stop, providing a hardened striker plate that withstands side loads and prevents fixture damage. Their tapered end press-fits into reamed holes. Made of hardened, ground 440C stainless steel. Outside diameter tolerance is –0.0000″ to +0.0002″.

Ball-Nose Spring Plungers

To Order For steel and stainless steel body plungers, please specify ***with or without a nylon thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the nylon thread-locking element.

The ball nose in these spring plungers rolls freely to minimize wear on materials before being clamped or locked down. They have a short travel range and high strength in side-load applications. Also function as a latch, holding point, or as a detent by using indentations (*e.g.* on a gear rack or multiposition switch) as stop points. A slot in the body allows installation with a screwdriver or plunger wrench (sold separately on page 2606).

Max. temperature for steel and stainless steel plungers with stainless steel ball is 250° F and 180° F with nylon ball. Max. temperature for acetal plungers with stainless steel ball is 190° F and 180° F with nylon ball.

Stainless steel plungers are made of corrosion-resistant 300 series stainless steel, making them a good choice for corrosive environments. ***Acetal plungers*** are lightweight yet durable and have electrical insulating properties. Best suited for use with plastic components.

Stainless steel balls are 440C stainless steel. *Nylon balls* resist moisture and solvents, and act as an electrical insulator.

Brass and Type 316 Stainless Steel Ball-Nose Spring Plungers

Similar to our other ball-nose spring plungers, but these are made of brass or Type 316 stainless steel for use in more corrosive applications. A slot in the body allows installation with a screwdriver or plunger wrench (sold separately on page 2606). All have Class 2A threads and are nonmagnetic. Max. temperature for all spring plungers is 170° F.

Brass plungers offer good corrosion resistance and have a decorative brass finish. They are great for use in marine environments. They have a brass ball.

Stainless steel plungers are Type 316 stainless steel for excellent corrosion resistance. They have a stainless steel ball.

To Order: Please specify ***with or without acrylic thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the acrylic thread-locking element. For information about thread-locking elements, see page 2602.

Push-Fit Ball-Nose Spring Plungers

No special tools are needed for installation—just push these spring plungers into unthreaded holes. They have a tapered end and smooth body for easy installation. Great for use in wood, soft plastic, and aluminum. Maximum temperature is 250° F except for stainless steel body plungers with a nylon ball, which is 180° F. Body diameter tolerance is –0.000″ to +0.002″, unless noted.

Steel body plungers have a black-oxide finish. ***Stainless steel body*** plungers are made of corrosion-resistant 300 series stainless steel, so they're a good choice for corrosive environments. *Stainless steel balls* are 400 series stainless steel. *Nylon balls* resist moisture and solvents, and also act as an electrical insulator.

● Ball is made of acetal to prevent marring aluminum, brass, and other soft materials. ★ Body dia. tolerance is –0.000″ to +0.004″.

Round-Nose Spring Plungers

To Order: Please specify ***with or without nylon thread-locking element,*** except where noted. When threading into aluminum and other soft materials, select a plunger without the nylon thread-locking element. For information about nylon thread-locking elements, see page 2602.

The round, cylindrical nose of these plungers allows long travel plus the large bearing surface provides a smooth ride inside the plunger body. A single plunger can serve as an indexing stop on a rotary switch or as a latch on a cabinet door; a number of plungers can hold a door onto a cabinet. They are also used for proper positioning in fixtures and to eject parts from a punch press or forging die. A slot in the body allows installation with a plunger wrench (sold separately on page 2606); the short length plungers have a slot in the rear so they can also be installed with a screwdriver.

Choose from standard and short length plungers. Also known as stubby, ***short length*** plungers combine the short body of a ball-nose spring plunger with the longer nose of a round-nose spring plunger. They can be used in thinner materials and tight spaces while still providing ample plunger travel and high end forces.

Body Materials— Choose from steel and stainless steel. *Standard length steel plungers* have a black-oxide finish, unless noted. *Short length steel plungers* are zinc plated with a clear chromate finish, unless noted. Color is silver. *Stainless steel plungers* are made of corrosion-resistant 300 series stainless steel, so they're a good choice for food processing applications.

Nose Materials— Choose from heat-treated steel, 300 series stainless steel, acetal, and phenolic. *Acetal* and *phenolic* won't mar softer materials such as aluminum and brass. Phenolic has higher tensile strength and good dielectric and impact strength. It is also a good insulator and resists heat. Maximum temperature of steel, phenolic, and stainless steel nose plungers is 250° F. Maximum temperature for acetal is 190° F, unless noted.

♦ Maximum temperature for acetal nose is 122° F. ♣ Zinc-plated finish.

Brass and Type 316 Stainless Steel Round-Nose Spring Plungers

Similar to our other round-nose spring plungers, except these are made of brass or Type 316 stainless steel. A slot in the body allows installation with a screwdriver or plunger wrench (sold separately on page 2606). All have Class 2A threads and are nonmagnetic. Max. temperature is 170° F.

Brass plungers have good corrosion resistance and a decorative finish. They are great in marine environments.

Stainless steel plungers are Type 316 stainless steel and offer superior corrosion resistance.

Short Length—These plungers combine the short body of a ball-nose spring plunger with the longer nose of a round-nose spring plunger. Good for use in thinner materials and tight spaces.

To Order: Please specify ***with or without acrylic thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the acrylic thread-locking element. For information about thread-locking elements, see page 2602.

Mounting Base for Spring Plungers

Also known as tooling flanges, these mounting bases let you mount ball-nose and round-nose spring plungers. Bases have two holes for mounting to fixture surfaces (fasteners not included) and a threaded hole to insert the spring plunger. Ideal for fixtures that require a horizontal application.

Stainless steel bases are made of 300 series stainless steel for excellent corrosion resistance.

High-Torque Round-Nose Spring Plungers

To Order: Please specify ***with or without a nylon thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the nylon thread-locking element. For information about nylon thread-locking elements, see page 2602.

One-piece body with a machined-in hex drive withstands high torque. Easy to install with a hex key (not included). All plungers have Class 2A threads. Maximum temperature is 250° F (unless noted). ***Steel*** plungers have a black-oxide finish. ***Stainless steel*** plungers are made of corrosion-resistant 300 series stainless steel.

Acetal nose prevents marring on soft materials such as aluminum and brass. Max. temp. is 160° F.

Push-Fit Round-Nose Spring Plungers

Designed with a rounded cylindrical nose, these spring plungers offer longer travel and a larger bearing surface than push-fit ball-nose plungers. They have a tapered end and smooth body to easily push them into unthreaded holes. Good for use in wood, soft plastic, and aluminum. All have 440C series stainless steel noses (unless noted). ***Steel*** plungers have a black-oxide finish. ***Stainless steel*** plungers are 300 series stainless steel and offer excellent corrosion resistance.

■ Nose is Type 303 stainless steel.

Hex-Nose Spring Plungers

Long-Travel Plunger

With a hex-shaped nose on one end and a hex drive on the other, these plungers are easy to install and adjust with either a standard wrench for the plunger end or a hex key for the hex drive end (hex key not included). The nose has a rounded tip. Body and nose are steel with a black-oxide finish (unless noted). Maximum temperature is 250° F.

Standard Plungers— Use as parts ejectors, positioners, locks, and supports for die fixtures. **To Order:** Please specify ***with or without nylon thread-locking element.*** Select a plunger without the nylon thread-locking element when threading into aluminum and other soft materials. For information about nylon thread-locking elements, see page 2602.

Long-Travel Plungers— Ideal for large sheet metal forming dies, the long plunger stroke lifts formed sheets clear of the die for easy access and removal. Come with a nylon thread-locking element. Not recommended for use in aluminum or other soft materials.

Wrenches for Ball-Nose and Round-Nose Spring Plungers

Install and remove ball-nose and round-nose spring plungers with these wrenches. They work better than screwdrivers because their center hole lets the ball- or round-nose pass through to avoid damaging or overloading the spring.

For an index of fixturing components, see page 2596. For information about spring plungers, see page 2602.

Spring-Loaded Side Thrust Pins

Also known as spring locating pins, these side thrust pins have a spring-loaded head that moves from side to side. They are often used to hold, clamp, and position components for machining operations and assembly. Their compact design makes them especially useful when clamping small parts and for use in tight spaces. To install, simply press the knurled body into a drilled hole. Thrust pin is made of hardened zinc-plated steel; thrust pin body is aluminum.

Brass and Type 316 Stainless Steel Hand-Retractable Spring Plungers

Pull Ring

Stubby Pull Ring

Knurled Knob

L-Handle

Made of brass or Type 316 stainless steel, these spring plungers are great for use in corrosive applications. To retract the nose, just pull the knob, ring, or L-handle. All have Class 2A threads and are nonmagnetic. Maximum temperature is 170°F.

Brass has good corrosion resistance, a decorative finish, and is good for use in marine applications. *Type 316 stainless steel* has superior corrosion resistance.

Plungers with Locking Nose—Lock the nose into the retracted position by pulling the knob, ring, or L-handle and rotating it 90°. The plunger nose catches on the notched body and locks into position until you turn back the knob, ring, or L-handle.

To Order: Please specify ***with or without acrylic thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the acrylic thread-locking element. For information about thread-locking elements, see page 2602.

For an index of fixturing components, see page 2596. For information about spring plungers, see page 2602.

Hand-Retractable Spring Plungers

L-Handle Nonlocking Nose

Stubby Pull-Ring Nonlocking Nose

Stubby Pull Ring with 12″ Lanyard Nonlocking Nose

Knurled Knob Nonlocking Nose

Acetal Knob Nonlocking Nose

L-Handle Locking Nose

Pull-Ring Locking Nose

To Order: Please specify ***with or without thread-locking element.*** Element is nylon, except for 8690A11-A18 and 3403A31-A34, which is acrylic. When threading into aluminum and other soft materials, select a plunger without the thread-locking element. For information about thread-locking elements, see page 2602.

Retract the nose by pulling the handle, ring, or knob or by connecting them to a mechanism for automated operation. Use as locking pins on tables and platforms with adjustable-height legs; as a stop lock for components that index to different positions; and for other fastening, positioning, latching, and quick-disconnect applications. Inch sizes have Class 2A threads; metric sizes have Class 6G threads. Max. temp. is 250° F, except for acetal knob plungers which have a max. temp. of 190° F, plungers with an acetal nose which have a max. temp. of 180° F, and 8690A11-A18 and 3403A31-A34, which have a max. temp. of 170° F.

Plungers with Locking Nose— Lock the nose into the retracted position by pulling the handle, ring, or knob and rotating it 90°. The nose catches on the notched body and locks into position until you turn back the handle, ring, or knob.

Steel plungers with *L-handle*, *stubby pull ring*, *pull ring*, and *T-handle* have a zinc-plated finish. *Low-profile hex-drive handle* style has a countersunk knob with a hex drive for quicker installation than other hand-retractable plungers and a gold, zinc-chromate finish. *Knurled knob* style has a zinc-chromate finish. *Acetal knob* style has a black-oxide finish on the body and a black knob. ***Stainless steel plungers*** are made of 300 series stainless steel. *Acetal knob* style has a white knob.

Add-Your-Own-Handle Hand-Retractable Spring Plungers

Attach the knob or handle of your choice to the threaded spindle (see pages 2206-2230 for knobs and handles). You can screw the threaded body directly into the fixture or workpiece. Maximum temperature is 250° F. All plungers come with a locking nose—pull the nose back and turn it 90° to lock the plunger in the retracted position. ***300 series stainless steel*** plungers provide better corrosion resistance than steel.

To Order: Please specify ***with or without nylon thread-locking element.*** When threading into aluminum and other soft materials, select a plunger without the nylon thread-locking element. For information about nylon thread-locking elements, see page 2602.

Spring Stops

Mount these spring stops on flat surfaces to hold workpieces. The face is steel (unless noted) and the body is cast aluminum. ***Flat face*** stops have a large contact surface. ***Flat face with tang*** stops have a tang to prevent thin stock from sliding under the stop. Set the tang in a hole or slot below the working surface of the table or fixture. ***Flat face with chamfered bottom*** stops have a chamfered bottom to provide extra corner clearance for metal workpieces that have a weld bead or imperfection. ***Round face*** stops locate parts in jigs and fixtures. Ideal for curved or contoured surfaces. ***Acetal round face*** stops are the same as round face stops above, but with a nonmarring acetal face.

♣ Mounting base is triangular (versus rectangular as illustrated at right).

Hand-Retractable Spring Plungers for Thin Material

Nylon Knob *Threaded Spindle*

When holes aren't deep enough to fit the entire plunger body, use a hand-retractable plunger with locknut to adjust plunger depth. Locknut prevents loosening and increases holding power, especially in thinner materials. Body is steel with a black-oxide finish; plunger nose is hardened steel.

With Nonlocking Nose— Choose plungers with a nylon knob or a threaded spindle. *Plungers with threaded spindle* can be threaded onto machinery or topped with the knob or handle of your choice (see pages 2206-2230).

With Locking Nose— Lock nose into the retracted position by pulling the knob and rotating it 90°. The plunger pin catches on the notched body locking it into position until you lift and turn back the knob.

Plate-Mount Hand-Retractable Spring Plungers

Plate-mount plungers offer an alternative to threaded styles when mounting to flat surfaces. Plate has two countersunk holes for mounting to a flat surface (fasteners not included). To lock plungers with locking nose, pull knob to retract, then rotate 90°. Notches located on opposite positions of plunger head will prevent plunger from slipping back to its forward position. Mounting plate is made of zinc-plated, die cast zinc; plunger nose is made of hardened steel; knob is black nylon.

Removable Drill Bushings

Also known as slip-fixed ("SF") renewable bushings, these bushings are easy to replace and are ideal for multi-step operations such as drilling, reaming, and tapping. Bushings are held in place by a lock screw or locking liner (lock screws and locking liners sold separately on page 2611). Just unscrew the lock screw to remove. Bushings can also be used with liners that are permanently mounted in jig plates and fixtures. Liners are sold separately on pages 2611-2614. Made of hardened steel. Rockwell hardness is C61-C65. Dimensions meet ANSI standards. Length tolerance is ±0.015".

Note: By measuring from centerline of bushing to centerline of lock screw, you can determine the exact location of hole for lock screw.

Also Available: Other sizes. Please ask for 8493A999 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 bushings of same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

Lock Screws for Removable Drill Bushings

To secure removable bushings, insert lock screws into the notches on the head of the bushings. Made of case-hardened steel. See Removable Drill Bushings on page 2610 for information on how to determine hole location for lock screws. Pkg. quantity is 10.

Locking Liners for Removable Drill Bushings

The locking flange on these liners will keep removable ("SF") bushings in place. Install the liner in a jig plate and place bushings inside the liner; a slight twist holds bushing. Made of hardened steel. Rockwell hardness is C61-C65.

Fits Removable Bushing OD	ID Tolerance	OD	Lg.	Head Dia.	Flange Dist.

Press-Fit Liners with Head

The head flange stops liners from pushing through jig plates. Also known as "HL" liners, they are compatible with removable bushings (see page 2610) and locating pins (see pages 2599-2600). Made of hardened steel. Rockwell hardness is C61-C65.

Steel Press-Fit Drill Bushings/Liners

Keep drill bits from wandering with these headless bushings, also known as "P" bushings. They mount flush with jig plates and have a beveled end for an easy press fit. Suitable for spacers, shims, and machinery bushings. Made of case-hardened steel. Rockwell hardness is C61-C65. Dimensions meet ANSI standards. Sizes with IDs smaller than 1″ also work as liners for removable bushings (see pages 2610-2611). **Also Available:** Other sizes. Ask for 8491A999 and specify ID, OD, and length. For 1″ and greater IDs, ask for 8494A999 and specify ID (1″ min.), OD, and length.

♦ *Prices shown are for 1-5 bushings of same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings; 25% for same size orders of 12 or more.*

Metric Steel Press-Fit Drill Bushings/Liners

Keep drill bits from wandering with these headless metric bushings, also known as "PM" bushings. They mount flush with jig plates and have a beveled end for an easy press fit. Also suitable for spacers, shims, and machinery bushings. Made of hardened steel. Rockwell hardness is C61-C65. Dimensions meet ANSI standards.

Also Available: Other sizes. Please ask for 8486A999 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 brushings of same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

Finish-Your-Own Steel Drill Bushings

These headless bushings have the same high-precision ground IDs as the Steel Press-Fit Drill Bushings on pages 2612-2613, plus an oversized OD to allow you to finish them to your specifications. 2½″ and 4″ long bushings can be cut to fit your application. Bushings should be machine ground. Made of hardened steel. Rockwell hardness is C62-C64.

Removable Drill Bushings for Thin-Gauge Material

Bushing

Lock Ring

Unlike standard press-fit bushings, these won't buckle the material or distort the hole. Designed for simple installation in thin-gauge aluminum and cold-rolled steel plates (1/64″ to ⅜″ thick). Insert bushing into drilled hole and twist the lock ring (sold separately) to secure. No pneumatic or hydraulic clinching or hammering tools required. Bushings and lock rings can be removed and reused. Left-handed thread prevents bushing from loosening while drilling. ***Bushings*** are made of C1144 carbon steel. Rockwell hardness is C59-C64. Bushing ID tolerance is +0.0001″ to +0.0015″; bushing flange OD tolerance is +0.003″ to +0.005″. ***Lock rings*** are aluminum.

For an index of fixturing components, see page 2596.

Stainless Steel Press-Fit Drill Bushings

Same as our Steel Press-Fit Drill Bushings on pages 2612-2613, except these headless bushings are made of stainless steel for corrosion resistance. Use as drill guides, spacers, shims, and machinery bushings. Dimensions meet ANSI standards (unless noted).

Type 303 stainless steel bushings provide excellent corrosion resistance in chemical and marine environments. They're non-hardened and have reduced wearability compared to hardened steel bushings.

Type 440C stainless steel bushings are hardened to Rockwell C56 for better wearability, but provide less corrosion resistance than Type 303 stainless steel bushings. Compared to steel bushings they have less wearability, but are more corrosion resistant.

Also Available: Other sizes. Please ask for 8504A999 and specify ID, OD, and length.

Serrated Press

Serrated Groove

Diamond Groove

Serrations grip soft materials to prevent rotation and spin out. Dimensions meet ANSI standards. Rockwell hardness is C61-C65. ***Serrated press*** have one row of serrations. ***Serrated groove*** and ***diamond groove*** that are 5/16″-½″ long have two rows of serrations; bushings ¾″ and longer have three rows of serrations and two grooves.

Serrated Press Bushings— Press-fit into magnesium, aluminum, and masonite wood. ***Serrated Groove Bushings—*** Great for encasing into plastic jigs. ***Diamond Groove Bushings—*** Knurls resist force and provide holding strength. Use for encasing into plastic jigs.

Also Available: Other sizes. Please ask for: 3377A999 for serrated press bushings; 3378A999 for serrated groove bushings; 3379A999 for diamond groove bushings. Specify ID, OD, and length.

Press-Fit Drill Bushings with Head

Also known as "H" bushings, these bushings have a head to prevent them from being pushed through the jig when drilling pressure is extreme. Made of hardened steel. Rockwell hardness is C61-C65. Dimensions meet ANSI standards.

Also Available: Other sizes. Please ask for 8492A999 and specify ID, OD, and length.

♦ *Prices shown are for 1-5 bushings of same ID, OD, and length. Deduct 15% for same size orders of 6-11 bushings and 25% for same size orders of 12 or more.*

Hand Files

For file handles, see page 2624.

About Files

When choosing between files, it is important to consider the file's pattern and what type of filing work needs to be done.

Hand files, also known as American-pattern, machinists', and engineer's files, are used to remove material quickly. Choose from coarse, medium, and fine cut. *Coarse* cut, also known as bastard cut, provides heavy removal with a rough finish. *Medium* cut, also known as second cut, provides light removal with a fair finish. *Fine* cut, also known as smooth cut, provides a smooth finish.

Precision hand files, also known as Swiss-pattern files, are especially useful for finishing delicate and intricate parts. These are made to measurements that are more exact to ensure precision and smoothness. They are excellent for removing burs, shaping, enlarging small holes, and finishing narrow grooves and keyways.

Coarseness of Cut

Hand File Cuts

Double Cut—Diagonal rows of teeth run across the width of the file in opposite directions. Use with heavier pressure than single-cut style for faster, rougher-finish cutting and more rapid material removal.

Single Cut—A single set of parallel teeth runs diagonally across the width of the file. Use with light pressure for smooth finishes and to sharpen tool cutting surfaces.

Rectangular Hand Files

Double-Cut Straight

Double-Cut Tapered

Double-Cut Thin-Tapered

Single-Cut Plain Edge

Single-Cut Tapered Edge

The most popular files because of their versatility, these rectangular-profiled files can debur, sharpen, and polish.

Double-Cut Straight Files—Also known as hand files. One edge is plain (without teeth), allowing you to file one surface without damaging the adjoining surface. Files do not taper and all are double cut on sides and edge except 4242A12, which has a single-cut edge.

Double-Cut Tapered Files—Also known as flat files, these taper to fit into tight spots. Double cut on both sides and single cut on both edges.

Double-Cut Thin-Tapered Files—Also known as warding files. Use these very thin files in narrow spaces. Files taper extremely toward the point and have double-cut sides and single-cut edges.

Single-Cut Plain Edge Files—Also known as lathe files. Use for filing material that is rotating on a lathe and for bench filing soft metals such as aluminum. Single cut on sides; edges are plain (without teeth) to protect adjacent surfaces. Files taper slightly to the point.

Single-Cut Tapered Edge Files—Also known as mill files. Use for sharpening mill and circular saws, drawfiling, and finishing metals. Files have two square edges (unless noted). They are single cut and slightly tapered in width to the point.

★ Has one square edge and one round edge.

Half-Round Hand Files

Use on concave, convex, and flat surfaces. All files are double cut on the flat side, unless noted. ***Double-cut files*** are also double cut on the convex side. ***Single-cut files*** are single cut on the convex side.

♦ Is a pipeline/welder's file and single cut on both sides.

Round Hand Files

For filing holes and concave surfaces. Files are tapered slightly toward the point. All are single cut except the 14″ file, which is double cut.

Lg.	Dia.	Coarse Cut	Each	Medium Cut	Each	Fine Cut	Each
4″	1/8″	4233A11	$5.70	4233A17	$6.28	4233A24	$6.86

14″	5/8″	4233A16	16.67				

Round Hand Files for Chain Saws

Get between the round and hooded teeth of chain saws with these untapered files. Files feature a knurled cut, similar to a double cut.

Lg.	Dia.	Each	Lg.	Dia.	Each
6″	1/8″	4246A8 $1.28	8″	1/4″	4246A3 $1.49

8″	7/32″	4246A2 1.23			

For information about hand files, see page 2618. For file handles, see page 2624.

Triangular Hand Files

With three sides of filing surface and a triangular shape, these files can reach spots other files can't.

Double-cut files have sharp corners and teeth cut to a point. With sides that taper toward the point, they are ideal for filing grooves and corners. Not suitable for filing saws.

Single-cut files provide a smoother finish than double-cut files and are ideal for filing between saw teeth. *Standard taper* is for saws with 6 to 8 teeth per inch. Use *slim taper* on saws with 8 to 12 teeth per inch, and *extra-slim taper* on saws with 8 to 16 teeth per inch.

4-in-1 File/Rasp

The popular ones always travel together. Each set is made up of some of our popular files packaged in a canvas roll pouch, unless noted.

3-Piece Welders' File Set— Includes one each of the following files (canvas roll pouch is not included):
10″ single-cut tapered file, fine cut
12″ half-round file, coarse cut
14″ half-round single-cut file, coarse cut
Set without File Handles ..... **42255A11** **Per Set** $45.91

5-Piece Combination File Set— Includes one each of the following files:
8″ single-cut tapered file, coarse cut
8″ half-round file, coarse cut
8″ round file, coarse cut
8″ square file, coarse cut
8″ versi-cut file
Set with Wood File Handles ..... **8181A12** **Per Set** $50.90

5-Piece Combination File Set with Ergonomic Handles— Includes one each of the following files with rubber-coated ergonomic file handle, furnished in a plastic pouch:
8″ double-cut tapered file, coarse cut
8″ single-cut tapered file, coarse cut
10″ single-cut tapered file, coarse cut
10″ half-round, coarse cut file
6″ single-cut triangular file
Set with Ergonomic Cushion File Handles .... **8181A21** **Per Set** $59.37

6-Piece Medium-Cut Combination File Set— Includes one each of the following medium-cut files furnished in a metal case:
4″ double-cut straight file
4″ double-cut tapered file
4″ half-round file
4″ round file
4″ double-cut triangular file
4″ square file
Set with Wood File Handles ..... **8171A11** **Per Set** $45.27

6-Piece Fine-Cut Combination File Set— Includes one each of the following fine-cut files:
4″ double-cut tapered file
4″ double-cut thin-tapered file
4″ half-round file
4″ round file
4″ single-cut triangular file
4″ square file
Set without File Handles ..... **8192A11** **Per Set** $52.02
Set with Wood File Handles ..... **8192A12** **Per Set** $55.89

6-Piece Rectangular and Half-Round File Set— Includes one each of the following files:
10″ double-cut tapered file, coarse cut
10″ double-cut tapered file, medium cut
10″ double-cut tapered file, fine cut
10″ half-round file, coarse cut
10″ half-round file, medium cut
10″ half-round file, fine cut
Set with Wood File Handles ..... **42415A41** **Per Set** $86.02

9-Piece Combination File Set— Includes one each of the following files and a file cleaner:
10″ double-cut tapered file, coarse cut
10″ double-cut tapered file, fine cut
10″ single-cut tapered file, coarse cut
10″ half-round file, coarse cut
10″ round file, coarse cut
7″ single-cut triangular file
10″ square file, coarse cut
10″ 4-in-1 file/rasp
Set without File Handles ..... **8173A11** **Per Set** $94.84
Set with Wood File Handles★ ..... **8173A12** **Per Set** $101.98
★ The 4-in-1 file/rasp does not have a handle.

10-Piece Combination File Set— Includes one each of the following files:
10″ double-cut tapered file, coarse cut
10″ double-cut tapered file, medium cut
10″ half-round file, coarse cut
10″ half-round file, medium cut
10″ round file, coarse cut
10″ round file, medium cut
10″ square file, coarse cut
10″ square file, medium cut
6″ knife file, coarse cut
6″ knife file, medium cut
Set with Wood File Handles ..... **42415A43** **Per Set** $131.80

13-Piece Combination File Set— Includes one each of the following files and a file cleaner:
10″ double-cut tapered file, coarse cut
10″ double-cut tapered file, fine cut
10″ double-cut tapered file for aluminum
10″ single-cut tapered file, coarse cut
10″ single-cut tapered file, fine cut
10″ half-round file, coarse cut
10″ half-round file, fine cut
10″ round file, coarse cut
10″ round file, fine cut
8″ double-cut triangular file, medium cut
10″ square file, medium cut
10″ versi-cut file
Set without File Handles ..... **8176A11** **Per Set** $144.16
Set with Wood File Handles ..... **8176A12** **Per Set** $155.02

For information about hand files, see page 2618. For file handles, see page 2624.

Black-Oxide Hand Files

When durability is a necessity, black-oxide coating is the answer. These files resist clogging and rusting, and keep the sharp edge on their teeth better than other standard files.

File Sets—Furnished in a cloth pouch.

5-Piece Combination File Set—Includes one each of the following coarse-cut files with an ergonomic rubber handle:

8″ single-cut rectangular file with chipbreakers
8″ single-cut rectangular file
8″ double-cut half-round file
8″ double-cut round file
8″ double-cut square file

42605A81 ..... **Per Set** $58.69

9-Piece Combination File Set—Includes one each of the following files with an ergonomic rubber grip handle (unless noted). All are coarse cut, unless otherwise stated:

10″ all-purpose rectangular file, one side double cut, one side single cut, with integrated handle
10″ double-cut rectangular file
10″ single-cut rectangular file with chipbreakers
10″ single-cut rectangular file
10″ single-cut rectangular file, fine cut
10″ single-cut half-round file with chipbreakers
10″ double-cut half-round file
10″ double-cut round file
6″ double-cut slim-taper file

42605A82 ..... **Per Set** 95.51

Smooth-Finish Milled-Tooth Hand Files

Half-Round

Rigid Flat

Flexible Flat

Two-Hand File Holder

Also known as auto body files, these tools have large, knife-like teeth that leave smooth, groove-free surface finishes and provide easy chip clearance. For use on sheet steel, aluminum, cast iron, bronze, lead, and plastics. All have tangs, unless noted. ***Half-round file*** is for concave surfaces and bearings. ***Flexible flat files*** have no tangs. The 14″ files fit the ***two-hand file holder*** (sold separately).

Lg.	Wd.	Thick.	Teeth Per Inch		Each

Two-Hand File Holder for 4283A15 and A16 ..... 4316A12 **Each** $58.53

Electrical Contact Hand File

With a small chisel that easily fits in slots and gaps, this file is ideal for renewing electrical contact surfaces such as spark plugs, ignition points, and magnetos. File is also especially useful for dressing points tipped with platinum, tungsten, and similar metals. File is double cut and 0.044″ thick. Overall length is 5 1/4″. Width is 5/16″.

4275A2 ..... **Each** $4.98

Three-in-One Hand File

Get the convenience of having three hand files with the ease of carrying only one. Plus this tool's case doubles as a comfortable handle. All files have a black-oxide coating for extra durability. Tool includes three 6″ coarse-cut files in the following shapes: flat, round, and square.

42525A7 ..... **Each** $26.28

Integrated Handle Black-Oxide Hand Files

The built-in handle allows you to safely use these files without having to spend money on a separate file holder. The black-oxide coating resists clogging and rust and helps the teeth stay sharper for longer.

Combination Files—Untapered with coarse teeth, one side is double cut for fast removal and one side is single cut for smoother finishes.

Versi-Cut Rectangular File—The coarse teeth remove metal quickly, while the chipbreaking tooth pattern leaves a smooth finish. File tapers toward the point for detail work.

Rectangular and Half-Round Files for Aluminum

Rectangular

Half-Round

Specially designed teeth prevent shavings from clogging these files, making them ideal for work on aluminum and soft metals. Files are tapered and double cut.

For information about hand files, see page 2618. For file handles, see page 2624.

Precision Hand Files

Rectangular | Half-Round | Round-Tapered | Triangular | Thin-Tapered

Manufactured to precise production standards, these files, also known as Swiss-pattern files, offer better accuracy and finer results than regular hand files.

Rectangular Files— Also known as regular pillar files, they are similar to hand files, but only ⅔ as wide. Great for general purpose filing on flat surfaces as well as filing slots, keyways, and other narrow work. Sides are double cut and edges are plain (without teeth).

Half-Round Files— Use for filing flat and curved surfaces, holes, and corners. Tapered to a point in both width and thickness and double cut.

Round-Tapered Files— Use these files for enlarging holes and rounding off radii. Files are tapered gradually in length to a fine point and are double cut.

Triangular Files— Use for filing corners, angles, grooves, notches, and other areas where a sharp edge must be held. Files have a 60° angle, are tapered to a point, and are double cut on all sides.

Thin-Tapered Files— Also known as warding files. Use in narrow spaces where other files won't fit. The width is tapered slightly to a point. Sides are double cut and edges are single cut.

Precision Hand File Sets

When one just won't cut it, try buying sets of some of our most popular precision hand files.

5-Piece 8½″ File Sets— For in-between jobs that are too big for needle files, but require finer control and better finish than larger, heavier files. Files have a built-in handle. Length of cut is 4″. Sets come in a vinyl pouch and include one each of the following: rectangular, half-round, round, triangular, and square files.

		Per Set
Cut No. 00 File Set	8194A11	$74.07
Cut No. 1 File Set	8194A12	74.32

6-Piece 6″ File Sets— These standard files with tangs are double cut and come in a plastic pouch. Sets include one each of the following: rectangular, half-round, round-tapered, knife, triangular, and thin-tapered files.

		Per Set
Cut No. 0 File Set	42365A21	$77.60
Cut No. 2 File Set	42365A22	89.00

Bendable Precision Needle Files

Made of flexible steel, these files can be bent by hand to conform to the shape of your workpiece. You can bend these files more than 100 times before they will break. All files are Cut No. 2 and have a 1/8″ dia. handle. Overall length is 6¼″.

Shape		Each	Shape		Each

6-Piece File Set— Includes one each of the files listed above in a vinyl pouch.

8178A31 ..... **Per Set** $132.35

Files for Stainless Steel

Hand File

Precision Hand File

Rectangular | Half-Round | Round | Triangular | Square

Coated to eliminate corrosive residue on the workpiece, these files also resist clogs and are ideal for use on stainless steel and other hard-to-file metals. Surface hardness is Rockwell 72 HRC. Files are double cut. Choose from hand files, also known as American-pattern files, and precision hand files, also known as Swiss-pattern files.

● One edge is plain.

Precision & Diamond Hand Files

For information about hand files, see page 2618. For file handles, see page 2624.

Precision Needle Files

The small tips of these files allow you to get into tight spots. Buy them individually or in sets. All shapes taper to the point, except rectangular, joint, and slitting. Files have 1/8″ dia. round knurled handles.

Standard Needle Files and File Sets— Individual files are 6¼″ long. Sets contain one of each shape illustrated above in a plastic pouch. In the 4″ length, an oval file replaces the crossing file.

Economy Needle File Sets— Contain one of each file shape illustrated above. Sets include a plastic pouch.

Integrated-Handle Diamond File

Use diamonds to file and cut extremely hard and abrasive materials. File is nickel plated to resist rust. Cuts carbide, hardened steel, ceramics, glass, reinforced plastic, tungsten, composites, and hard alloys.

File has a coarse 100 grit side for fast material removal and a fine 220-240 grit side for finishing. Edges are plain. Handle is hardwood. Diamond surface length is 8″; overall size is 13″ Lg.×1″ Wd.×0.25″ Thick.

42345A11 ..... **Each** $64.93

Precision Detail Files

Also known as riffler files, these tools are made in a variety of shapes for reaching into the smallest nooks and crannies. Use in die and mold finishing, delicate instrument work, and for other fine filing jobs. Files are double ended with a smooth portion in the middle for a comfortable handhold. All files are 6″ long. Choose from Cut No. 0 and Cut No. 2.

Note: Simonds trade numbers are preceded by the letters "DS."

Diamond Hand Files

The strength of diamonds makes these hand files ideal for filing hard, brittle materials, such as work-hardened steels, ceramics, carbides, plastics, and composites.

Standard Files— All have a 1½″ long diamond surface (unless noted). Overall length is 6″.

Heavy Duty Files— Diamond surface is 4 5/16″ long; overall length of each file is 8⅝″.

For information about hand files, see page 2618. For file handles, see page 2624.

Diamond Needle Files

Small, diamond-covered tips make these files excellent for detailed work on carbide, hardened steel, ceramic, glass, and other hard-to-machine materials. Grades—*Coarse:* 80/100 grit. *Medium:* 120/140 grit. *Fine:* 170/200 grit. All shapes except rectangular are tapered to a point. Files have diamonds on all surfaces except the standard barrette, which has diamonds on only one side.

Standard Files— Have a diamond surface length of approximately 2¾″. Overall length is 5½″. Shank diameter is ⅛″.

Miniature Files— Also called escapement files. Diamond surface is 1⁹⁄₁₆″ long; overall length is 5½″.

Integrated-Handle Tungsten Carbide Grit Files

Tough and durable but easy on your hands. These files last longer than standard files and have an integrated plastic handle for a sure grip. Files are flat and made of carbide grit bonded to both sides and edges. ***Combination file*** has a 46 grit surface on one side and 80 grit on the other side. ***Heavy duty file*** has a 24 grit surface on both sides.

	Lg.	Wd.	Thick.		Each
Combination	14″	1″	⅛″	4337A11	$25.23
Heavy Duty	14″	1″	3⁄16″	4337A12	30.40

Tungsten Carbide Grit Needle Files

Second only to diamonds in hardness, these tungsten carbide files provide nearly the same results as diamond needle files but at a lower cost. Ideal for precise detailed work. Use on a variety of hard and soft materials including wood, plastic, glass, ceramic, acrylic, stone, marble, and Kevlar. Files consist of medium 280-grit tungsten carbide metallurgically bonded onto steel blanks.

6-piece sets include the five file shapes plus one file handle.

To Order: For individual files, please specify shape: rectangular, round, knife, triangular, or square.

Shank Dia.	O'all Lg.		Files Each	6-Piece Sets Per Set
⅛″	5½″	4288A4	$12.51	4288A16 $55.09
3⁄16″	7⅛″	4288A5	14.51	4288A26 63.29

Rasps

With their sharp, raised teeth, these rasps can aggressively file soft, clog-prone materials better than regular files. Use on wood, leather, plastic, and soft metals.

A Flat Fast-Cut Rasp— Has rasp teeth on one side, double-cut file teeth on the other, and single-cut file teeth on the edges. Also has sharper teeth than deep-cut rasps.

B Flat Deep-Cut Rasp— Has rasp teeth on one side, double-cut file teeth on the other, and single-cut file teeth on the edges. Also has narrow chipbreaker teeth.

C Double-Ended Flat Rasp— Has rasp teeth on both ends of one side, double-cut file teeth on both ends of the other side, and single-cut file teeth on the edges.

D Half-Round Coarse-Cut Rasps— Have single-cut file teeth on the edges.

E Half-Round Medium-Cut Rasps— Have single-cut file teeth on the edges and a flatter curve than standard half-round rasps.

F Double-Ended Half-Round Rasps— Also called shoe rasps. Each side has rasp teeth on one end and double-cut file teeth on the other. Edges are plain.

G Round Coarse-Cut Rasp— Has a slightly tapered, slim round shape and a square tang.

File Handles

Attach these handles to files to enjoy both comfort and ease of use when filing.

A Long-Ferrule File Handles—These top-quality hardwood handles have a heavy-gauge steel ferrule.

B Screw-On File Handles—A threaded steel insert securely holds the file and prevents these hardwood handles from splitting. Ferrule is heavy-gauge steel.

C All-Purpose File/Tool Handle—Just turn the bottom knob to lock and unlock the gripping jaws. The chuck-style jaws grip files as well as oval- and round-shank tools. Handle is made of plastic.

D Short-Ferrule File Handles—These economical hardwood handles have a metal ferrule and securely hold the file.

E Insert-a-Grip File Handle—This comfortable, molded handle has four interchangeable inserts. Handle is made of tough, durable plastic with a textured finish.

F Ergonomic File Handles—These plastic handles are designed to fit the natural contour of your hand. Air vents absorb hand moisture.

G Rubber-Coated Ergonomic File Handle—The rubber coating and shape of the handle provides comfort and control. Cushion inserts provide a strong grip.

H Needle-File Handle—Twist the upper and lower halves to open, then twist back to clamp the file and lock it in place. Accepts round handles 3 mm (1/8″) in diameter. Handle is made of plastic.

Air-Powered Filing and Finishing Tools

Their reciprocating action and vibration-free design keep the strain off your arms while providing quick results. Both tools have a 1/4″ NPT female air inlet. They come with four round-shank files (flat, half round, round, and triangular) plus a 3/8″ air hose and hex wrench.

Economy—For light, intermittent use. Recommended operating pressure is 90 psi; air consumption is 4 cfm; weighs 2.25 lbs.

Heavy Duty—For heavy, continuous use. Recommended operating pressure is 85 psi; air consumption is 8.5 cfm; weighs 2.4 lbs.

Disposable Economy Deburring Tool

Blade swivels 360° to remove burs from steel and aluminum. Overall length is 5 1/2″.

4286A14 ..... **Each** 1-9 $3.64 10-Up $3.09

Quick-Change Hex Shank Deburring Bits

The 1/4″ hex body allows you to easily change bits. Use the ***insert bit*** with hand screwdriver bit holders and the ***power bit*** with power tools. Made from high-speed steel, these bits swivel to follow the edges and contours of your workpiece. Hex body is made of steel.

	Blade Lg.	O'all Lg.		Each
1/4″ Hex Insert Bit	1/2″	1 1/8″	7811A18	$2.83
1/4″ Hex Power Bit	1/2″	1 3/4″	7811A19	2.83
Hand Driver for Insert Bit			7811A21	8.36

Small Hole Deburring Tools

Debur the front and back edges of a hole with just one tool. Pivoting, triangular-shaped blades give these tools added versatility. They have an all-steel body with an aluminum push-button that reverses the blades. Blades are high-speed steel and cut clockwise and counterclockwise.

Hole Dia. Range	O'all Lg.	*Deburring Tools*	Each	*Repl. Blades*	Each

0.394″-0.866″	6 3/4″	7815A23	21.38	7815A43	11.76

Double-Blade Sheet-Metal Deburring Tool

With its dual, circular-shaped blades, this tool can remove burs from both sides of 1/32″ to 1/2″ thick sheet metal in one motion.

Blades can be rotated and reversed. To use on straight edges of steel blocks, place a single roller blade in the center of the holder.

Tool includes a safety guard and two high-speed steel blades (when ordering replacement blades, two blades are required). Use M42 cobalt steel blades (optional; sold separately below) for stainless steel.

4247A33 ..... **Each** $19.21

Blades		Each 1-9	Each 10-Up
Replacement High-Speed Steel	4247A35	$4.80	$4.54
Optional M42 Cobalt Steel	4247A37	7.13	5.63

Deburring Tools and Blades

The smooth 360° swivel action of these blades allows them to rotate freely to follow the contours and edges of any workpiece. Store additional blades in the tools' handles. Handles are made of plastic and blades are high-speed steel, unless noted.

Deburring Tools

The pull-down locking collar on these tools makes changing blades a snap. *Telescoping tools* have adjustable blade holders that lock at various lengths and reach into holes up to 5″ deep. *Nontelescoping tools* have blades that fit directly into the handle.

Standard Duty Tools— Use with standard duty blades only. Include one B-10 and one B-20 blade.

Heavy Duty Tools— Use with heavy duty blades only.

Three-blade tools come with three heavy duty blades; 4289A34 includes E-100A, E-200, and E-300 blades; 4289A71 includes E-100, E-200, and E-350 blades. *Five-blade tool* includes one each of E-100, E-101, E-102, E-200, and E-350 blades.

		Each

Deburring Tool Sets

7-Piece Set— Comes in a plastic case. Includes one handle, one O-ring blade with 0-3 mm groove width, one 16.5 mm countersink, one RDE-18 countersink, one thread cleaner blade, one E-100A blade, and one blade for holes up to 1.5 mm in diameter.

4289A78 ..... **Per Set** $62.80

11-Piece Set— Comes in a plastic case. Includes two handles, one holder, one reversible countersink, one 3.2 mm countersink, one 10.4 mm countersink, one 16.5 mm countersink, one RDE-18 countersink, one E-100 blade, one E-200 blade, and one E-300 blade.

4289A79 ..... **Per Set** $114.54

28-Piece Set

28-Piece Set— Comes in a hardwood box. Includes one aluminum handle, five telescoping holders, one 1/2″ (F-12) countersink, one 3/4″ (F-20) countersink, two wrenches, and the following blades:

Standard blades: three B-10, two B-20, and one each of B-30, B-50, and B-70. *Heavy duty blades:* two E-100 and one each of E-200, E-300, E-600, and E-601. *Specialty tool blades:* one each of C-40, C-42, D-80, and D-82.

4289A36 ..... **Per Set** $133.10

Colored-Handle Deburring Tools

In a cluttered tool box, these tools' colored handles stand out. Tools have a twist-lock blade release for quick blade changes and a pocket clip for added convenience. Handles have room to store blades (except 4493A44). Blade pivots 360°. Handles are plastic.

Individual Tools— Furnished with one blade. **To Order:** Please specify handle color: blue, green, red, or yellow.

4-Piece Sets— Contain one each of blue, green, red, and yellow handles each furnished with one blade.

Heavy Duty 4-Handle/4-Blade Set— Contains one each of blue, green, red, and yellow handles and one each of E-100, E-100A, E-150, and E-200 blades. Overall length is 4 3/4″.

Heavy Duty 4-Handle/4-Blade Set			4493A44	**Per Set**	$9.04	

Carbide Burs

Carbide burs are harder and stay sharper longer than high-speed steel. Burs with head dia. larger than shank dia. have a steel shank and carbide head. All others are solid carbide. Approx. overall length is 1½″ for 3/32″ shank tools; 1½″-2⅛″ for ⅛″ shank; 2″ for 3/16″ shank; and 2″-3⅜″ for ¼″ shank.

Double cut removes metal faster and gives a coarser finish than single cut. ***Single cut*** is for gradual removal and finer finishes.

Cylindrical—Flat End

Extra-Long Carbide Burs

Get to spots where other burs come up short. Burs with 1/8″ shank dia. are solid carbide and have an overall length of 3″. Those with 1/4″ shank dia. have a 6″ long steel shank with a brazed-on solid-carbide head.

Double-cut burs remove metal faster and give a coarser finish than single-cut burs. ***Single-cut burs*** are best when slow material removal is acceptable and a finer finish is required.

★ Has an 8° taper. ♣ Has a 14° taper.

8-Piece Extra-Long Bur Sets—Furnished in a wood box.

You'll get one each of the following (Head Dia.×Lg. of Cut): 1/4″×1/2″ and 1/2″×1″ cylindrical—flat end, 1/4″×1/2″ and 1/2″×1″ cylindrical—radius end, 1/4″×1/2″ tree—pointed end, 1/4″×1/2″ tree—radius end, 1/4″×3/16″ ball, and 1/4″×5/8″ 14° taper—radius end.

Double-Cut Set ..... 4324A51 Per Set $189.87
Single-Cut Set ..... 4324A52 Per Set $189.87

TiAlN-Coated Carbide Burs

A special coat provides these burs with resistance to heat and wear, giving them extra long life. Overall length is 2″ to 2 7/8″. ***Double-cut burs*** remove metal faster and give a coarser finish. ***Single-cut burs*** are for slow material removal and producing a finer finish.

Clog-Free Carbide Burs

Nonferrous and nonmetallic materials clogging things up? Try using these unique burs. Their flute design allows for easy chip flow and fast material removal, making them ideal for use on aluminum, magnesium, plastics, fiberglass, hard rubber, and other soft "sticky" materials.

All have brazed-on steel shanks except those with a 1/4″ head dia., which are solid carbide. Shank dia. is 1/4″. Overall length is 2″ to 3 3/8″.

Style ***H*** has a 28° included angle, unless noted.

Diamond-Cut Carbide Burs

With their raised, diamond-cut tooth pattern, these burs create a powder-like chip and leave a fine finish. Use to debur die and mold steels and other hard materials. Shank dia. is 1/4″. Overall length is 2″ to 2 7/8″.

Head Dia.	Lg. of Cut		Each

High-Speed Steel Burs

Stronger than carbide burs, but not as sharp, these burs are for use on mild steel and softer, nonferrous materials. Also known as rotary files.

All burs listed below are standard, medium cut. Tools with a 1/8″ shank have an overall length of 1 1/4″-1 1/2″. Those with a 1/4″ shank have an overall length of 1 5/8″-3 1/4″.

Machine-Ground Burs—Machine cut with a series of unbroken flutes. Ideal for mild steel and ductile, stringy materials such as aluminum, brass, magnesium, plastics, and composites.

Hand-Chiseled Burs—Hand cut to form an irregular pattern of staggered teeth, these burs are ideal for use on tougher, denser materials.

High-Speed Steel Bur Sets

8-Piece Sets with 1/4″ Shank Diameter—Each set includes one of each tool listed below in a wood box.

Sets include: (Head Dia.×Lg. of Cut) 3/8″×1 1/2″ and 3/4″×3/4″ cylindrical—flat end, 3/4″×3/8″ ball, 5/8″×1″ oval/egg, 5/16″×1 1/8″ convex-concave, 3/4″×5/8″ inverted cone with 34° included angle, 5/8″×13/16″ taper—radius end with 36° included angle, and 5/16″×5/8″ taper—radius end with 19° included angle.

		Per Set
Machine-Ground Set	4306A2	$205.32
Hand-Chiseled Set	4306A1	253.12

12-Piece Sets with 1/8″ Shank Diameter—Each set includes one of each tool listed below in a wood box.

Sets include: (Head Dia.×Lg. of Cut) 1/8″×5/8″ and 1/4″×1/2″ cylindrical—flat end, 1/8″×5/8″ cylindrical—radius end, 1/4″×1/2″ tree—pointed end, 1/4″×1/4″ and 3/8″×3/8″ ball, 1/4″×1/2″ oval/egg, 1/8″×9/16″ cone with 91/2° included angle, 1/4″×1/2″ cone with 24° included angle, 3/8″×3/8″ cone with 51° included angle, 5/8″×1/8″ thin disc—square edge, and 5/8″×1/8″ thin disc—radius edge.

Sheet Metal Edging Bur

Mounts quickly, and gets the job done fast. With its 5/16″ hex shank, you can easily use this tool with an electric or cordless drill. Its v-shape means you can debur the edges of sheet metal or both sides of a hole in just one stroke. Made from hardened tool steel, it debur holes 3/4″ dia. and larger in up to 10-ga. mild and stainless steel, copper, brass, and aluminum. Bur also includes one pair of replacement cutters. Overall length is 2″.

Sheet Metal Edging Bur	4982A11	Each	$24.62
Replacement Cutters (3 Pairs/Pkg.)	4982A22	Per Pkg.	$19.24

General Purpose Grinding Bits

Use these abrasive bits for light to medium stock removal on most metals. Also known as mounted points, they are made of aluminum oxide with a vitrified (clay) bond. All have 1½″ long shanks. Pkg. qty. is 5. ***60-Grit Bits—*** Medium grit. Color is burnt orange. ***120-Grit Bits—*** Fine grit. Color is blue.

Maximum rpm Safety Note: The rpm ratings for grinding bits follow ANSI standard B7.1 for maximum safe operating speeds with ½″ or less of exposed shank between the chuck or collet and the abrasive bit. ***Caution:*** As the shank of the abrasive bit is extended beyond ½″, maximum safe rpm decreases significantly. Refer to ANSI standard B7.1 for safety requirements.

General Purpose Grinding Bit Sets

Each of these sets contains a selection of our most popular medium grit (approximately 60 grit) grinding bits. Bits are aluminum oxide with a vitrified (clay) bond and are burnt orange in color. Shanks are 1½″ long. Furnished in a foam block stand.

For dimensions, illustrations, and max. rpms for these bits, see page 2630. *Note:* For maximum rpm safety information, see note on this page.

Shank Dia.	No. of Pieces	Set Contents	Per Set
⅛″	12	2 each: B42, B44, B46, B52, B53, B103	6165A11 $15.47

Coarse-Finish Grinding Bits

A coarse grit makes these abrasives perfect for aggressive deburring and grinding of most metals, including carbon steel and alloy steel. All shanks are ¼″ Dia.×1½″ Lg. For illustrations of these bits, see page 2630.

Aluminum oxide bits can be used on most metals, including carbon steel and alloy steel. All are 36 grit and clay-bonded (vitrified). Color is blue-gray. ***Zirconia alumina*** bits are for heavy duty stock removal. Ideal for use on heat-sensitive materials such as stainless steel. All are 30 grit and resin-bonded. Color is gray-brown.

18-Piece Aluminum Oxide Set— You'll get three each of A3, A5, A11, A12, W207, and W220 bits in a foam block stand.

4393A51 ..... **Per Set** $35.68

Hex-Shank Grinding Bits

Bits fit into any drill chuck or screwdriver that accepts their ¼″ hex, 1½″ long shank. Use for light to medium material removal on most metals. Bits are aluminum oxide, medium (60) grit with a vitrified (clay) bond. Color is gray-blue.

	Head Dia.	Head Lg.	Max. rpm (See Note)	Shape No.		Each

4087A21 ..... **Per Set** $18.43

Miniature Grinding Bits

With a small 3/32″ shank diameter, these miniature abrasives are just right for precise and intricate jobs. Their fine grits also produce an extra-smooth finish. Made of aluminum oxide, these bits can be used on most metals, including carbon steel and alloy steel. All are vitrified-bonded. Shanks are 1½″ long. Maximum rpm is 35,000. *Note:* For maximum rpm safety information, see note on this page.

Fine bits are brown. ***Extra fine*** bits are white.

Miniature Tool Sets

134-Piece Assortment with ⅛″ Shank Diameter— You'll get six aluminum oxide and four silicon carbide grinding bits in various shapes; six ⅞″ Dia.×⅛″ Thick. aluminum oxide grinding wheels; 36 15/16″ Dia.×0.025″ Thick., 20 15/16″ Dia.×0.040″ Thick., six 1½″ Dia.×0.040″ Thick., and two fiberglass-reinforced 1¼″ Dia.×0.040″ Thick. cutoff discs; 16 ½″ dia. aluminum oxide sanding bands (fine and coarse); one rubber drum for sanding bands; 36 ¾″ dia. sanding discs; and one ⅛″ shank dia. mandrel for cutoff and sanding discs. Furnished in a plastic case. Maximum rpm is 30,000.

4475A13 ..... **Per Asst.** $49.66

34-Piece Assortment with 3/32″ and ⅛″ Shank Diameter— You'll get six 3/32″ shank dia. aluminum oxide grinding bits; five 3/32″ shank dia. steel burs; three ⅛″ shank dia. felt bobs; six 3/32″ and one ⅛″ shank dia. hair-and-wire wheel brushes; one 3/32″ shank dia. mandrel; two aluminum oxide sanding bands mounted on rubber drums (⅛″ shank dia.); one 3/32″ shank dia. rubber-bonded grinding bit; two rubber-bonded disc/wheels; two felt wheels; one cloth wheel; one cutoff wheel; and three grinding wheels. Maximum rpm is 20,000.

34-Piece Assortment

4475A11 ..... **Per Asst.** $51.53

Maximum rpm Safety Note: The rpm ratings for grinding bits follow ANSI standard B7.1 for maximum safe operating speeds with ½″ or less of exposed shank between the chuck or collet and the abrasive bit. ***Caution:*** As the shank of the abrasive bit is extended beyond ½″, maximum safe rpm decreases significantly. Refer to ANSI standard B7.1 for safety requirements.

Smooth-Finish Rubber-Bonded Grinding Bits and Wheels

A durable rubber bond holds the abrasive together, cushioning the grinding operation. As a result, these bits produce smooth finishes and are perfect for blending, finishing, and deburring. ***Aluminum oxide*** bits can be used on most metals, including carbon steel and alloy steel. ***Silicon carbide*** bits are ideal for nonferrous metals such as aluminum, brass, bronze, and magnesium.

Aluminum Oxide Bits

All have 1½″ long shanks. **To Order:** Please specify grit: extra-fine (180, red); fine (120, green); medium (70, black); or coarse (46, brown).

Assortment

200-Piece Assortment— You'll get 48 silicon carbide and 16 aluminum oxide ⅞″ Dia. × ⅛″ Thick. straight wheels, 48 silicon carbide and 16 aluminum oxide ⅞″ dia. tapered-edge wheels, and 48 silicon carbide and 16 aluminum oxide 15/16″ Lg. × ¼″ Wd. bits; grits range from medium (120) to extra fine (240). Also includes four ⅛″ dia. mandrels, two spiral mandrels with hex nut, one 3/32″ collet, and one 1″ Lg. × ½″ Wd. block. Maximum rpm is 21,000.

4772A15 ..... **Per Asst.** $83.72

Tungsten Carbide Grinding Bits for Nonmetals

More economical than diamond abrasives, these tungsten carbide bits grind nonmetals such as fiberglass, ceramics, composites, and plastics.

Abrasive-Grit Bits

The grit is bonded to steel. All have a medium (36) grit. Shank lengths vary from ⅞″-1″. Color is bronze.

Sharp-Tooth Bits

Tooth Detail—Coarse Grade

These bits have structurally aligned pointed teeth that last longer and leave a smoother finish than abrasive-grit bits. Shank lengths vary from 1″ to 1¼″. Shank diameter is ¼″. Choose coarse grade for rapid stock removal; color is red. Choose fine grade for detailed finishing work; color is blue.

To Order: Please specify grade: coarse or fine.

	Head Dia.	Head Lg.	Max. rpm (See Note)		Each
21	9/16″	¾″	25,000	**4257A18**	$17.85

24	13/16″	1¼″	10,000	**4257A77**	19.29
25	⅜″	¾″	25,000	**4257A27**	16.88

Maximum rpm Safety Note: The rpm ratings for grinding bits follow ANSI standard B7.1 for maximum safe operating speeds with ½″ or less of exposed shank between the chuck or collet and the abrasive bit. ***Caution:*** As the shank of the abrasive bit is extended beyond ½″, maximum safe rpm decreases significantly. Refer to ANSI standard B7.1 for safety requirements.

Diamond-Plated Grinding Bits for Carbides, Ceramics, and Glass

Not only are these diamond abrasives harder than tungsten carbide, they also last longer and make more aggressive cuts. Use for grinding very hard nonmetals such as carbides, ferro-ceramics, ceramics, reinforced plastic, sapphire, glass, abrasive composites, and cemented carbides. All bits have a hardened, stainless steel shank to minimize deflection. Color is silver.

For extended tool life and improved finish, a water- or oil-soluble mist or flood coolant is recommended.

CBN Grinding Bits for Steel and Alloy Steels

Even hard metals can't stand up to abrasion from these extremely hard grinding bits. Made of cubic boron nitride, they work well on stainless steel, work-hardened steel, alloy steels, and cast iron. Also known as jig grinding pins or mandrels, they're excellent for internal, jig, and contour grinding jobs. All points have a hardened stainless steel shank to minimize deflection. Color is silver.

For longer tool life and improved finish, a sulpho-chlorinated oil coolant is recommended.

Air-Powered Grinders for Bits and Burs

A

B

C

D

E

F

G

H

J

K

L

M

Also known as die grinders, these tools can be used with shank-mounted grinding bits as well as carbide burs, felt bobs, sanding drums, and other shank-mounted accessories. All operate on 90 psi air pressure. They have an NPT female air inlet and lever throttle (except Styles C, K, L, and M) to regulate air flow. Furnished with a collet (except Style E) and at least one collet wrench.

***A-C Economy Grinders*—**Designed for light duty, intermittent use, these grinders are the perfect choice for occasional grinding, deburring, and finishing jobs.

Style A is our most economical die grinder.

Style B have a lever lock to prevent accidental start-up.

Style C has the high-speed capabilities to handle numerous grinding applications. It has a ring-style throttle to regulate air flow and comes with a 5-ft. air hose.

***D-F Maintenance Grinders*—**More durable than our economy grinders, these grinders are designed for more frequent use. All have a lever lock to prevent accidental start-up.

Style E also includes a 1/4″ Jacobs drill chuck instead of a collet.

Style F has a long spindle for grinding in hard-to-reach areas.

***G-M Heavy Duty Grinders*—**Rated for continuous use, these grinders can take on your tough jobs. They have high-quality bearings for long spindle life and are ergonomically designed for optimal comfort.

Style H feature a high-profile flange that protects your hand and prevents accidental start-up. The exhaust can be changed from the rear to the front. *Model* 4426A25 also has a lever lock to prevent accidental start-up.

Style J is just like Style H shown above, but with a long-nose spindle for hard-to-reach spots.

Styles K and ***L*** are high-speed, lightweight, pencil-sized tools. Choose from straight (K) and angled (L) models. Both have a ring-style throttle to regulate air flow and include a 5-ft. air hose.

Style M is an air-turbine grinder. It's totally oil-free and has no gears to maintain. It sustains constant speed under load; operates at high speeds for long cutting-tool life; and features a lightweight, ergonomic design to reduce operator fatigue. Furnished with a 5-ft. hose with shut-off valve and 1/4″ NPT female coupling.

Economy Air-Powered Bit and Bur Grinder Kits

1

2

Each kit we offer comes furnished with an economy grinder, two wrenches, a collet, a plastic carrying case, and the accessories mentioned below. The kits are intended for light, intermittent use.

***1 Grinder and Bit Kit*—**This kit includes 10 grinding bits (five with 1/8″ dia. shank, five with 1/4″ dia. shank).

***2 Grinder and Bur Kit*—**This kit includes seven solid carbide, double-cut burs with 1/4″ dia. shanks.

♦ Includes a 1/4″ collet and a 1/4″ to 1/8″ collet reducer bushing.

Caution: Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.

Air-Powered Angle Grinders for Bits and Burs

For a different slant on your grinding operation, try one of these angle grinders. Also known as die grinders, they operate on 90 psi air pressure and are for use with grinding bits, burs, and other shank-mounted accessories. They have an NPT female air inlet, lever throttle, and come furnished with a collet and a collet wrench.

A

A ***Economy Grinders—*** Designed for light, intermittent use, these grinders are perfect for occasional grinding, deburring, and finishing jobs. They have a lever lock to prevent accidental start-up.

B&C ***Maintenance Grinders—*** More durable than our economy grinder, these grinders are designed for more frequent use. All have a lever lock to prevent accidental start-up.

Style C has a 60° angled head to get into spots a right-angle grinder can't reach and a soft grip to reduce vibration.

B

D&E ***Heavy Duty Grinders—*** Rated for continuous use, these grinders can take on your tough jobs. They have high-quality bearings and collets for long spindle life.

Style D have lubricated gears for long wear. They also have sealed bearings to minimize maintenance.

Style E feature heavy duty gears and precision collets for smooth operation and long tool life. A high-profile flange protects your hand and prevents accidental start-up. Exhaust can be changed from rear to front.

Economy Grinder and Grinding Bit Kit

You'll get the economy grinder 4576A61 listed above, plus 10 grinding bits (five with 1/4″ dia. shank, five with 1/8″ dia. shank), a 1/8″ collet, two wrenches, and a plastic carrying case.

4576A62 ..... **Each** $70.32

Electric Grinders for Bits and Burs

F G H J K

Also known as die grinders, these tools are for use with grinding bits, burs, and other shank-mounted accessories. Grinders are double insulated (except 43805A61) and come furnished with one collet, at least one collet wrench, and power cord with two-prong plug (unless noted). All are UL listed.

F ***Makita Grinder—*** Has a thumb-slide on/off switch.

G ***DeWalt Grinder—*** Has a paddle on/off switch and speed lock-on button. CSA certified.

H ***Milwaukee Grinder—*** Has a toggle on/off switch. CSA certified. An optional 1/8″ collet is sold separately below.

J ***Bosch Grinder—*** Our most powerful grinder for your heavy duty jobs. It has a trigger bar with lock-off switch to prevent accidental start-up. Also has a speed lock-on button.

K ***Dumore Grinder Kit—*** Comes with precision 1/4″ and 1/8″ collets, eight grinding bits, a dressing stone, and carrying case. Grinder has a toggle on/off switch.

Electric and Cordless Dremel Light Duty Grinders for Bits and Burs

Model 100-N/7

Model 8000-03

Versatile and compact, these tools are great for light grinding, sanding, finishing, and polishing. They accept a multitude of accessories, including grinding bits, burs, drill bits, polishing wheels, drum sanders, sanding bands, and wire brushes. **Also Available:** Replacement parts. Ask for 4344A82 and specify part.

Grinder Kits

Electric Grinder Kits— All have a shaft lock for easy tool changes and a two-prong plug with 6-ft. power cord, unless noted. *Models 4000-2/30* and *3000-1/24* can be run at variable speeds. *Model 4000-2/30* is furnished with a circle cutter, 30 assorted accessories, and a plastic storage case. *Model 3000-1/24* is furnished with 24 assorted accessories and a plastic storage case. *Model 100-N/7*, a single-speed grinder, is furnished with a 7-piece accessory kit and has a 10-ft. power cord.

Cordless Grinder Kit— With its powerful 10.8-volt lithium-ion battery, this grinder works like a corded tool. Plus, it can be run at variable speeds. Grinder features a shaft lock for easy accessory changes and a battery fuel gauge. Furnished with a battery, 3-hour charger, 40 assorted accessories, collet wrench, and a plastic storage case.

Electric Flexible-Shaft Grinders for Bits and Burs

Hang-Up-Style Tool Shown on Optional Motor Hanger

Bench-Style Tool with Foot-Operated Speed Control

Standard Collet-Style Handpiece

Slimline Collet-Style Handpiece

Three-Jaw Chuck-Style Handpiece

Our handy flexible-shaft grinders have a variable-speed control so you can select the right speed for your accessory or application. All have a 110-130 volt, AC/DC, 50/60 Hz motor and foot-operated speed control (except where noted). Grinders and handpieces are sold separately.

Grinders come in hang-up and bench (with iron base and swivel assembly) styles, both with a 6-ft. power cord. To prevent premature wear and shaft failure, do not bend shafts to less than a 4″ radius (see illustration). For proper operation, clean and lubricate shafts every 50 hours of use.

Maintenance duty grinders can handle most jobs. Both have a ball-bearing motor, 5/32″ diameter shaft, and a protective steel-lined sheath with silencer. 4454A75 is UL listed and CSA certified. 4454A49 is CSA certified. *Heavy duty* grinders are built for continuous use. They have a ball-bearing motor, 15/32″ diameter shaft, and heavy duty protective sheath. CSA certified.

Handpieces run smoothly, eliminating the vibration, noise, and heat found in other hand-held power tools. All are 1″ in diameter (except where noted) and measure approximately 5″ to 6″ long. Handpieces for maintenance duty and heavy duty tools are not interchangeable.

Standard collet style have a tapered front grip; 3/32″, 1/8″, and 1/4″ collets; a pin; and a wrench. *Slimline collet style* is for use with maintenance duty tools only. Handpiece is just 3/4″ in diameter so it comfortably fits smaller hands. Perfect for fine, detailed applications. Furnished with 3/32″ and 1/8″ collets. *Three-jaw chuck style* accepts shank diameters up to 5/32″. Furnished with a chuck key.

Replacement shafts include inner shaft and outer sheath.

Accessories

Seven-Piece Collet Set— For use with standard collet-style handpieces. You'll get 3/32″, 3 mm, 1/8″, 5/32″, 3/16″, 6 mm, and 1/4″ collets in a plastic case.

4454A56 ..... **Each** $45.48

Motor Hanger— Screws onto the top or side of your workbench for suspending hang-up-style tools. It features full-swivel capability and a locking screw. A T-rod lets you hang two tools from one hanger.

4454A78 ..... **Each** $58.51

Caution: Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.

Flexible Shaft Conversion Kits

Simply attach these flexible shafts to your power drill or bench-mount motor, and you've got a tool for all your grinding, deburring, and sanding jobs.

Light duty shaft is 39″ long. Furnished with handpiece, 1/8″ and 1/4″ collets, wrench, and lockpin. Maximum rpm is 18,000. For proper operation, do not bend shaft to less than a 4″ radius (see illustration).

Heavy duty shaft works with any 1/4- to 1/2-hp motor (maximum rpm is 3,450). Its built-in slip clutch prevents overload and damage to the rotating shaft. Measuring 60″ in length, the shaft comes furnished with a ball-bearing handpiece and motor coupling. The handpiece end has a 1/2″-20 spindle thread, two 1 7/8″ dia. flanges, and two hex nuts. The end that attaches to your motor has a 1/2″ female coupling with two set screws. For proper operation, do not bend shaft to less than a 7″ radius (see illustration).

Grinding Discs

Also known as Type 27 or raised-hub wheels, these grinding discs are designed for use in pneumatic and electric right-angle grinders. They're ideal for smoothing metal surfaces, removing weld seams, and other light grinding. The ***1/8″ thick discs*** can also be used for notching, cutting off, and occasional light side grinding applications. Discs are 30 grit, except where noted. The ***1/4″ thick discs*** work best for aggressive metal removal, but cannot be used for cutting off or notching. Discs are 24 grit, except where noted. Color is black.

Grinding Discs

Aluminum Oxide— A good value for everyday use, these resin-bonded aluminum oxide wheels offer an economical balance between aggressive stock removal and long life when grinding a variety of ferrous metals. ***Aluminum Oxide/Zirconia Alumina Blend—*** With a more aggressive abrasive and a superior bond, these discs last nearly twice as long as the aluminum oxide discs when grinding stainless steel, steel alloys, and iron. ***Ceramic Alumina/Zirconia Alumina Blend—*** An advanced, patented combination of abrasive grain and bond in these discs results in a 50% more aggressive cutting rate and up to nine times the life span of the aluminum oxide discs. Perfect for grinding stainless steel and hard-to-grind alloys.

♣ Max. rpm is 20,000. ▲ 24 grit. ♠ 3/16″ thick. ● 30 grit.

Application-Specific Grinding Discs

Special abrasives and bonds make these 1/4″ thick, 24-grit discs particularly well-suited for certain applications. ***Silicon Carbide for Masonry—*** When grinding concrete, masonry, and stone, this abrasive cuts faster and lasts longer. ***Aluminum Oxide for Aluminum—*** Bonded without any wax or rubber filler, these discs resist loading and are ideal for grinding aluminum and other soft metals. ***Clean-Bond Aluminum Oxide for Stainless Steel—*** The absence of any iron, sulfur, or chlorine in these discs means they won't contaminate stainless steel. Also known as INOX wheels.

Coarse-Finish Grinding Cups

Side View

Coarse grits make these resin-bonded cups ideal for aggressive stock removal. Frequently used for smoothing weld seams and removing flaws from castings, they are also known as snagging wheels, flared-cup wheels, and cup stones. Cups mount on right-angle grinders with a male 5/8″-11 threaded arbor. A special wheel guard is recommended. Color is black.

Note: Cup dia. shown is large dia./small dia.

Steel-back cups have a steel plate on the back for added safety. ***Aluminum oxide cups*** are suitable for use on most ferrous metals, including stainless steels and some cast iron. Grit is 16. ***Zirconia alumina cups*** produce finer finishes than aluminum oxide. They also last longer and make faster cuts on stainless steel and other ferrous metals. Grit is 24. ***Silicon carbide cups*** work best on concrete, masonry, and some nonferrous metals. Grit is 16.

Saucer-Shaped Grinding Discs

Side View

These saucer-shaped grinding discs are designed to be held at shallower angles than standard Type 27 raised-hub discs, so they're easier to use. Also known as Type 28 raised-hub wheels, they are made of aluminum oxide and are for use on right-angle grinders. All are 24 grit. Color is black. Use on alloy steel and other ferrous metals.

Disc Size, Dia. × Thick. × Arbor	Max. rpm	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.
4 1/2″ × 1/4″ × 5/8″-11	13,300	10	4477A3	$5.25	$4.75

See-Through Grinding Discs

Side View

Slots along the perimeter of these grinding discs allow you a clear view of your work surface as the disc spins. Plus, their upside-down dish shape provides a large contact area, yielding a smooth finish. Also known as AVOS Type 29 wheels, they are made of aluminum oxide and have a raised hub for use on right-angle grinders. Color is black.

Use 36-grit and 60-grit discs on ferrous metals. Use 46-grit discs on aluminum and other nonferrous metals, or when loading is a problem.

Disc Size, Dia. × Thick. × Arbor	Grit	Max. rpm	Pkg. Qty.		Each Partial Pkg.	Each Full Pkg.

Contour-Cutting Semiflexible Grinding Discs

Standard — Side View

A flexible backing allows these aluminum oxide discs to conform to curved or rough surfaces and leave a smooth, swirl-free finish. Use on ferrous metals. All have a raised hub for use with right-angle grinders. ***Backup pads*** are required, unless noted.

Standard Discs— Use for grinding, descaling, polishing, blending, and finishing. These discs are reinforced with a top layer of woven cloth and an internal layer of fiberglass. Color is black. **To Order:** Please specify 36, 46, 60, or 80 grit.

Spiral-Rib Discs— Geometrically designed to make aggressive cuts. Discs have a fiber back and heat-dissipating holes for long life with minimal loading. Color is red. **To Order:** Please specify 24, 36, 50, or 60 grit.

Air-Powered Right-Angle Grinders for Grinding and Sanding Discs

4″ Economy

7″ Maintenance

4 1/2″ Heavy Duty

These air-powered grinders have a threaded spindle and wheel guard for use with raised-hub grinding discs (see page 2637 for grinding discs). They can also be used with sanding discs, wire cup brushes, and wire wheel brushes. All operate on 90 psi air pressure. Grinders have an NPT female air inlet, lever throttle to regulate air flow, and include a wrench.

Economy Grinder— Designed for light, intermittent use, this grinder is perfect for occasional grinding, deburring, and finishing jobs. It has a lever lock to prevent accidental start-up and includes a side handle.

Maintenance Grinders— More durable than our economy grinder, these grinders are designed for more frequent use. They feature a good power-to-weight ratio, have a lever lock to prevent accidental start-up, and include a side handle. *Model* 43605A22 includes a wheel nut and flange.

Heavy Duty Grinders— Rated for continuous use, these grinders can take on your tough jobs. They feature heavy duty gears for smooth operation and long tool life. A high-profile flange protects your hand and prevents accidental starts. Exhaust can be changed from rear to front. Furnished with a wheel nut and flange.

Caution: ***Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.***

Smooth-Finish Cotton-Laminate Grinding Discs

With a perfect blend of cotton laminate and aluminum oxide abrasive, these grinding discs leave smooth surfaces and allow you to grind and finish in one operation. They're shaped like raised-hub Type 27 discs for use on right-angle grinders.

24-grit discs are perfect for light to medium weld removal on aluminum, steel, and stainless steel. Color is brown. ***36-grit discs*** are great for finishing stainless steel and can also be used on brass, bronze, copper, and mild steel. Color is white.

Electric Right-Angle Grinders for Grinding and Sanding Discs

The threaded spindles of these grinders accept raised-hub grinding discs. Grinders can also be used with sanding discs, wire cup brushes, and wire wheel brushes. All have a spindle lock for fast wheel changes and a side handle. All are UL listed. Styles B and F are also C-UL listed. Styles A, E, F, and G are also CSA certified.

The ***4″, 4 1/2″, 5″, and 6″ tools (A-D)*** are double insulated and include a grinding wheel, wheel guard, flange for use with 7/8″ arbor discs, wrench, and power cord with two-prong plug, unless noted.

The ***7″ and 9″ tools (E-G)*** are more powerful. All are double-insulated and furnished with a two-prong plug and wheel guard, unless noted.

A ***DeWalt 4 1/2″, 5″, and 6″ Grinder-Sanders—*** Have a speed lock-on button. 8705A61, *A77*, and *A78* have a paddle-style on/off switch; 8705A64 has a thumb-slide switch; 8705A65 has a trigger-style switch. Grinding wheel is not included for 8705A61 and A64 (see grinding discs on page 2637).

B ***Milwaukee 4 1/2″ and 5″ Grinder-Sanders—*** Have a five-position wheel guard and paddle-style on/off switch. 46225A23 and *A72* also have a speed lock-on button.

C&D ***Makita 4″, 4 1/2″, and 5″ Grinder-Sanders—*** *Style C* have a thumb-slide on/off switch. 8721A62 has variable speeds. *Style D* have a paddle-style switch and speed lock-on button.

E-G ***DeWalt and Milwaukee 7″ and 9″ Grinder-Sanders—*** All have a speed lock-on button. ***Style E*** have a trigger-style on/off switch. 4395A19 comes with a 7″ grinding wheel. ***Style F*** can be used with grinding cups. It has a trigger-style on/off switch and comes with 7″ and 9″ wheel guards. ***Style G*** can be used with grinding cups. It has a paddle-style switch and variable speeds with dial control. Wheel guard not included (sold separately below).

Heavy Duty Paint and Rust Grinders

8″ Electric Grinder

Featuring a rotating head with multi-tooth, hardened-steel cutting wheels, these grinders remove paint and rust from hard surfaces. Cutting depth is adjustable for a uniform surface.

Electric grinders operate on 115 VAC/DC, 50/60 Hz. They have a speed lock-on button and 15-ft. power cord with three-prong plug. ***Pneumatic grinders*** operate on 70-100 psi and have an NPT female air inlet. ***Replacement cutters*** are furnished two per set.

Electric Grinders

6″ Dia.	9562T12	163.64	9562T16▲	32.80

■ 15 per set. ▲ 49 per set.

Coarse-Finish Straight Grinding Wheels

With their coarse grits and reinforced fiberglass construction, these wheels are perfect for aggressive stock removal. Made of resin-bonded aluminum oxide, they are ideal for cleaning before welding, smoothing weld seams, and preparing metal surfaces for plating and painting. For use on ferrous metals such as stainless steel and cast iron. Use with portable straight-wheel grinders and bench grinders. Also known as Type 1 snagging wheels.

Wheel Size, Dia. × Thick. × Arbor	Max. rpm	Grit	Color		Each
2″ × 1/4″ × 1/4″	30,550	36	Black	8733A31	$2.34

6″ × 1″ × 5/8″	7,958	16	Black	8733A15	18.18

Smooth-Finish Cotton-Laminate Straight Grinding Wheels

The combination of cotton laminate and aluminum oxide abrasive yields such a smooth surface that these wheels allow you to grind and finish in one operation. Ideal for light grinding, corner blending, deburring, and finishing ferrous metals such as stainless steel and nonferrous metals such as aluminum. Also known as Type 1 wheels, they are for use on portable straight-wheel grinders.

To Order: Please specify grit: medium (54), fine (80), or extra fine (120); and grade: medium (for light deburring; color is tan) or hard (for light grinding and blending; color is brown).

Wheel Size, Dia. × Thick. × Arbor	Max. rpm		Each
2″ × 1/16″ × 1/4″	27,120	8736A291	$3.84
2″ × 1/8″ × 1/4″	27,120	8736A292	3.84
2″ × 1/4″ × 1/4″	27,120	8736A293	6.67
3″ × 1/16″ × 3/8″	18,080	8736A391	5.81
3″ × 1/8″ × 3/8″	18,080	8736A392	5.80

Air-Powered Grinders for Straight Grinding Wheels

A

B

Use these air-powered grinders with straight (Type 1) grinding wheels and wire wheel brushes. Furnished with an adjustable wheel guard, they operate on 90 psi air pressure. They have an NPT female air inlet and lever throttle to regulate air flow.

Style A have a high-profile flange that protects your hand and prevents accidental start-up. Exhaust can be changed from the rear to the front.

Style B feature a regulator that maintains constant speed when grinding.

	Wheel Size	No-Load rpm	hp	Spindle Size	Avg. cfm @ 90 psi	Exhaust Style	O'all Lg.	Air Inlet, NPT	Rec. Hose Size	Wt., lbs.		Each
A	3″	18,000	0.80	3/8″-24	36	Rear/Front	8 5/8″	1/4″	3/8″	2.5	45405A12	$625.24

Electric Grinders for Straight Grinding Wheels

C *DeWalt*

D *DeWalt*

E *Milwaukee*

Designed for use with straight (Type 1) grinding wheels, these electric tools can also be used with wire wheel brushes. All come furnished with a wheel guard and have a trigger on/off switch. ***Styles C*** and ***D*** have a speed lock-on button. They come with a power cord and three-prong plug. CSA certified. ***Style E*** is double insulated and has a power cord with two-prong plug. Includes a grinding wheel.

	Max. Wheel Size	No-Load rpm	Volts	Current	Hz	Amps	Spindle Size	O'all Lg.	Wt., lbs.	Cord Lg.	Manufacturer and Model No.		Each
C	2 1/2″	19,000	120	AC/DC	60	5.0	3/8″-24	18 1/2″	6.8	8-ft.	DeWalt DW880	43815A45	$269.38

Caution: ***Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.***

Coarse-Finish Grinding Cones and Plugs

Use these abrasives for aggressive stock removal on flat and curved surfaces, in corners, and inside castings. All are made of aluminum oxide with a resin bond. Also called cone and plug wheels, they have a female threaded arbor for attaching to your straight-wheel grinder. Use on ferrous metals. Color is gray-brown.

	Size, Dia. × Lg.	Grit	Max. rpm		Each

Smooth-Finish Rubber-Bonded Bench and Pedestal Grinding Wheels

The silicon carbide abrasive in these wheels is suspended in rubber for a cushioned grind that leaves a finer finish but removes less stock than vitrified-bonded wheels. Ideal for finishing, polishing, and deburring nonferrous metals such as aluminum, brass, bronze, and magnesium. For bench and pedestal grinders. **To Order:** Please specify grit: 46 (green), 120 (brown), 180 (red), or 240 (blue).

Wheel Size, Dia. × Thick. × Arbor	Max. rpm		Each
4″×½″×½″	5,250	**4824A84**	$36.11
6″×½″×½″	3,600	**4824A85**	70.47
6″×¾″×½″	3,600	**4824A86**	85.52

Air-Powered Grinders for Cones and Plugs

These grinders have a threaded spindle, a lever throttle to regulate air flow, and a built-in speed regulator. Operate on 90 psi air pressure. Inlet is ½″ NPT female; recommended hose size is ½″. Have a side exhaust.

Caution: Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.

No-load rpm	hp	Spindle Size	Avg. cfm @ 90 psi	O'all Lg.	Wt., lbs.		Each
12,000	1.30	3/8″-24	40	13″	4.3	**8710A61**	$940.50
12,000	1.70	5/8″-11	50	17″	6.3	**8710A62**	1,111.50

Arbor Attachment for Electric Motors

Convert your bench-mount motor into a grinder-buffer. Fit this attachment onto the motor shaft and then mount wire wheel brushes, grinding wheels, and more. Shaft thread is right hand. Flanges and hex nut are included.

Fits Shaft Dia.	Wheel Arbor Size	Max. Wheel Wd.	Flange Dia.	O'all Lg.		Each

Diamond Bench and Pedestal Grinding Wheels

Their honeycomb pattern enables these wheels to cut carbide, ceramics, glass, and other nonferrous materials without the need for dressing. Made of perforated diamond-coated steel molded onto plastic, they can be used wet or dry. Use on bench and pedestal grinders. **To Order:** Please specify grit: 100 (red), 180 (blue), or 320 (orange/yellow).

Wheel Style	Wheel Size, Dia. × Thick. × Arbor	Max. rpm		Each
Straight	6″ × ¾″×1¼″	3,820	**8725A81**	$110.00
Straight	6″×1″ ×1¼″	3,820	**8725A82**	120.00

Face	6″ × ½″× ½″	3,820	**8725A92**	146.00

Bench and Pedestal Grinding Wheels

Use these wheels on bench and pedestal grinders for deburring, sharpening, and grinding. They include one of each reducer bushing listed. The smallest bushing ID shown for each size is the smallest allowed for that size wheel. All have a vitrified (clay) bond.

Aluminum oxide wheels are for use on steel and other ferrous metals. Color of *economy wheels* is gray. Color of *premium wheels* is brown. ***Silicon carbide*** wheels are for use on cemented carbide cutting tools and other nonferrous metals such as aluminum, brass, and bronze. Color is green.

Economy wheels— For general purpose use. **To Order:** For aluminum oxide, please specify 24, 36, or 60 grit. For silicon carbide, please specify 60, 80, or 120 grit.

Premium wheels— Designed to stand up to heavy use. **To Order:** For aluminum oxide, please specify 36, 46, 60, 80, or 100 grit, unless noted. For silicon carbide, please specify 60, 80, or 120 grit.

Also Available: Replacement reducer bushings (nested sets as listed). Please ask for 4461A8 and specify wheel diameter and thickness.

Also Available: Bushing to reduce a 1¼″ arbor hole down to 7/8″. Please ask for 4461A9. *Note:* Order two bushings per wheel.

Norton Toolroom Grinding Wheels

Also known as type 1 wheels, these straight wheels have a vitrified (clay) bond. The size listed is wheel dia.x thick. x arbor hole. Rpm listed is the maximum. Truing and dressing before first use is recommended. Wheels come in a variety of grits, ranging from 46 (coarse) to 150 (fine), and grades ranging from F (soft) to M (hard).

White Aluminum Oxide (38A)—This brittle abrasive makes cool cuts. Use for light grinding on steel. Bond is VBE.

Blue Aluminum Oxide (32A)—A popular choice for general purpose grinding of most steels. Bond is VBE.

Light Gray Aluminum Oxide (32AA)—Made of a blend of aluminum oxide and ceramic aluminum oxide grains, this versatile abrasive is slightly more aggressive than 32A and lasts up to twice as long. Use for moderate to heavy stock removal on steel. Bond is VTR.

Blue Ceramic Aluminum Oxide (5SG)—The most durable abrasive. Use for moderate to very heavy stock removal on even tough-to-cut steel. Bond is VS.

About Norton Part Numbers

To reorder a wheel using a Norton part number, match the abrasive type, grit, and grade. Bond is determined by the abrasive type.

Example:

38A60-MVBE

Abrasive Type — Grit — Grade — Bond

Cupped and Dished Norton Toolroom Grinding Wheels

The special shapes of these wheels provide more clearance than typical straight wheels and are great for grinding flute and point angles in cutting tools. All have a vitrified (clay) bond. The size listed is wheel dia. × thick. × arbor hole. For information on abrasives and Norton part numbers, see the toolroom wheels on page 2642.

Aggressive-Cutting Porous-Bond Norton Toolroom Grinding Wheels

Chips and coolant flow more easily through these wheels because their bond leaves more space between abrasive grains. Good for heavy stock removal and require less frequent dressing. Bond is vitrified (clay). Size listed is wheel dia. × thick. × arbor hole. For information on abrasives and Norton part numbers, see the toolroom wheels on page 2642.

Diamond Toolroom Grinding Wheels for Carbide, Ceramics, and Glass

Straight

Plain Cup

Flared Cup

A synthetic diamond grit makes these wheels extremely hard and wear resistant. They're great for grinding and sharpening hard, non-ferrous materials such as carbide, ceramics, and glass. Not recommended for use on ferrous metals.

Wheels are resin-bonded and nickel-coated. Color is silver. All have a 1 1/4″ arbor hole to fit most toolroom grinders. ***Plain-cup wheels*** also have four 9/32″ countersunk bolt holes on a 3 1/4″ circle.

To Order: Please specify coarse (100), medium (150), or fine (220) grit.

Silicon Carbide Norton Toolroom Grinding Wheels for Nonferrous Metals

Straight *Cylinder*

Unlike aluminum oxide wheels, these silicon carbide wheels won't clog when used on nonferrous metals. They also grind faster, so there is less burning and discoloration on your workpiece. Great for use on carbide tools, titanium, aluminum, brass, and bronze. Abrasive is type 39C; color is green (unless noted). All have a vitrified (clay) VK bond. Rpm listed is the maximum.

Straight wheel size is dia. × thick. × arbor. *Cylinder wheel* size is dia. × thick. × arbor × abrasive wd.

Hand-Held Diamond Dressers

A *Single Point* **B** *Multiple Point* **C** *Replaceable Single Point*

Designed for light duty use, these hand-held dressers expose new, sharp grains on vitrified (clay) bonded bench and pedestal wheels.

Styles A&B have a 5″ long wood handle with 7/16″ Dia. × 6″ Lg. steel shank. Not resettable. *Style A* has a diamond with a single point for more aggressive stock removal than multiple-point dressers. *Style B* has multiple points for a finer finish than single-point dressers. A wide diamond section (3/8″ × 1 1/2″) provides better control.

Style C has a cast iron guide block with a steel handle. A knurled adjustment knob advances the single-point diamond. Diamond is replaceable. Overall size is 5 1/8″ Lg. × 2 1/2″ Wd.

Style A—Single Point

For Wheel Dia.	Approx. Carat Wt.		Each
4″- 6″	1/4	4542A1	$30.22

Dresser	8715A11	$69.09
Replacement Diamond Tip	8715A12	$40.00

Truing Devices for Diamond Toolroom Grinding Wheels

Angle Style

Brake-Controlled Style

Reshape worn diamond and CBN grinding wheels with these truing devices, which mount on your surface grinder. After truing, grinding wheels must be dressed with an aluminum oxide dressing stick (not included; see 4563A on this page).

Angle style device is easy and inexpensive. It mounts in a T-slot and features an angled dressing wheel. Use on wheels up to 8″ dia.

Brake-controlled style device provides constant drag and maintains an appropriate speed for efficiency and minimal diamond loss. Use on wheels up to 10″ dia.

Angle Style

Size is 3″ Lg. × 2 1/4″ Wd. × 3 3/16″ Ht. Furnished with one medium-grit silicon carbide wheel for truing 100-grit and finer wheels. *Optional coarse-grit wheel* is for wheels coarser than 100 grit.

		Each
Angle Style Truing Tool	6166A11	$90.20
Replacement 2 1/2″ × 1/2″ × 1 1/8″ Medium-Grit Wheel	6166A12	9.76
Optional 2 1/2″ × 1/2″ × 1 1/8″ Coarse-Grit Wheel	6166A14	9.76

Brake-Controlled Style

Size is 7″ Lg. × 4 1/2″ Wd. × 3 1/2″ Ht. Furnished with two medium-grit silicon carbide wheels for use on 100-grit and finer grinding wheels.

		Each
Brake-Controlled Style Truing Tool	6167A21	$536.58
Replacement 3″ × 1″ × 1/2″ Medium-Grit Wheel	6167A22	16.56
Replacement 5″ × 1/2″ × 1/2″ Medium-Grit Wheel	6167A24	27.59

Hand-Held Dressing Sticks

Stick

Rectangular Holder

With a variety of materials to choose from, these sticks are perfect for hand dressing a number of abrasive wheels. Use on wheels with a vitrified (clay) bond, unless noted. All are rectangular, unless noted.

Silicon Carbide Sticks—Use the *80-320 grit sticks* on metal-bonded diamond wheels.

Aluminum Oxide Sticks—For use on diamond and CBN wheels.

Boron Carbide Stick—Very hard and long lasting.

Round Silicon Carbide Stick with Holder—Comes with a disposable plastic holder with handle. Overall length is 7 1/2″.

Rectangular holder is for use with 1″ × 1″ × 6″ sticks. Thumb screw holds stick in place. Furnished with a 24-grit silicon carbide stick. Overall length is 12″.

Hand-Held Carbon Steel Hooded Dressers

Spur Style

Spiral Style

4526A16 & A18

4526A12, A14 & A21

Expose the grit, not your hand. These carbon steel dressers reveal new layers of sharp abrasive while the hooded design protects you from flying chips. Dressers are for use on grinding wheels with a vitrified (clay) bond.

Spur-style dressers are for quick, everyday use. They have multipiece cutters made of carbon steel. Also known as Huntington Pattern Dressers. ***Spiral-style*** dressers are for heavy duty use. They have one-piece, hardened-steel cutters that are formed in a continuous spiral for smoother cutting and finer finishes than spur-style cutters. An oil hole in the shaft provides access for lubrication.

Replacement cutters include everything you need to replace the cutters on one dresser.

Diamond Dressers

Single Point

Multiple Point

Impregnated

Keep your grinding wheels sharp with these dressers. Multiple-point and impregnated dressers have more diamonds than single-point dressers for faster, more consistent wheel dressing.

Single-Point Dressers—Overall length is 2″. *Nonresettable* dressers have a diamond with one point. Discard these tools when worn. *Resettable* dressers have a diamond with two points and may be reset once. **To Order:** Please specify 3/8″, 7/16″, or 1/2″ shank diameter.

Multiple-Point Dressers—Use for straight-face dressing of wide-face, large-diameter wheels as well as hard, coarse-grit wheels on cylindrical or surface grinders. Length is 1 1/2″; shank dia. is 7/16″. Not resettable.

Impregnated Dressers—Use for general purpose dressing on all grinders. A uniform diamond grit provides maximum cutting efficiency. Overall length is 1 5/8″; shank dia. is 7/16″. Not resettable.

Single-Point Dressers

For Wheel Dia.	Carat Wt.	Nonresettable	Each	Resettable	Each
4″-6″	1/4	4533A151	$36.69	4533A111	$42.75

Impregnated Dressers

For Wheel Dia.	Head Dia.		Each
Up to 12″	5/16″	4589A12	$37.10
12″-20″	3/8″	4589A13	42.91

Holder

Fits diamond dressers with a 7/16″ diameter shank. A collet holds the dresser in the tube. O'all length is 10″.

Note: Holders are not available for 3/8″ and 1/2″ shank diameter tools.

4533A9 ..... Each $27.69

Radius-Forming Diamond Dressers

Convex Radius

Concave Radius

Dress rounded shapes into the corner of your toolroom grinding wheels with these concave- and convex-radius tools. Dressers have a single-point diamond and are not resettable. For wheels up to 8″ diameter. ***Convex radius*** dressers, or phonopoint dressers, are for wheels of medium to fine grit and medium to soft hardness. Min. radius listed for ***concave radius*** dressers is the smallest corner radius the tool will form on the grinding wheel.

Convex Radius

Included Angle	1/8″ Shank Dia. × 1″ Lg.	Each	1/4″ Shank Dia. × 1 1/2″ Lg.	Each
60°	44045A61	$8.75	44045A64	$11.25

0.015″	4532A2	25.00	0.062″	4532A6	27.50
0.020″	4532A3	25.00	0.125″	4532A7	32.50
0.025″	4532A4	25.00			

Adjustable-Height Pedestals

These pedestals work with a variety of tools, including grinders, buffers, and electric motors. Made of 10-gauge steel, they are fully adjustable from 22″ to 43″ high and have a 17″ Wd. × 17″ Dp. base with four nonskid feet.

Grinder Pedestal—For grinders and buffers up to 14″. The mounting plate is 9 1/2″ Wd. × 8 1/2″ Dp. with two 1 5/8″ Lg. × 5/16″ Wd. mounting slots. Includes two 5/16″ Dia. × 2 1/4″ Lg. bolts with nuts. Weight is 19 1/2 lbs.

44665A33 ..... Each $106.64

Universal Tool Pedestal—For small bench-top tools. The table is 20″ Wd. × 17″ Dp. Weight is 26 1/2 lbs.

44665A43 ..... Each $136.96

Grinder Pedestal

Diamond Dresser for Surface Grinders

Mount this dresser to the T-slot of your surface grinder, or secure it to a magnetic chuck. It has a base size of 2 1/2″ × 6″ and holds a 1/4-carat, single-stone diamond with a 7/16″ dia. shank at a 15° angle. It is resettable. Use on 2″-6″ diameter wheels.

		Each
Complete Dresser (Holder with Diamond Dresser)	4541A11	$60.01
Holder without Diamond Dresser	4541A2	27.93
Replacement 1/4-Carat Diamond Dresser	4541A12	36.25

Toolroom Grinding Wheel Mounting Adapters

Mount toolroom grinding wheels with a 1 1/4″ arbor to most surface grinders with these taper wheel adapters. They can also be used on similar machines that have a spindle with a 3″ taper per foot and a 1″ opening at the large end of the taper.

Adapters are made of hardened and ground steel and consist of a hub, adapter nut, and lock washer. They are 2 1/4″ in diameter. Choose ***left-hand thread*** (for clockwise spindle rotation) or ***right-hand thread*** (for counterclockwise spindle rotation).

Optional *spanner/socket wrench* installs and removes spindle and adapter nuts. Optional *puller bushing* removes adapter from spindle.

Bench Grinders and Grinder-Buffers

General Purpose Grinder

Deluxe Heavy Duty Grinder

Our bench grinders feature a totally enclosed motor, vented-exhaust wheel guards (unless noted), adjustable tool rests, adjustable eye shields, and spark breakers. They're furnished with one coarse-grit and one medium-grit grinding wheel, except grinder-buffers, which are furnished with one coarse-grit grinding wheel and a wire wheel brush. All have an 8-ft. power cord with three-prong plug, except three-phase tools and 4452A21, which have leads for hardwiring. UL listed, unless noted. The 115/230-volt models are wired for 115-volt service.

General purpose grinders are a good choice for everyday bench grinding, tool resharpening, and buffing. They feature a base-mounted on/off switch (guarded on 8″ and 10″ models) and oval exhaust vents.

All ***heavy duty*** models are made of durable cast iron and cast aluminum and have lifetime-lubricated ball bearings. All meet OSHA requirements. *Deluxe* models also include illuminated eye shields, a tool tray, and a water pot. For more accessories, see page 2645.

● Does not fit 4601A54, 4601A33, or 4600A1.

Replacement Eye Shield

For *general purpose grinders*. Includes left- and right-hand shields, brackets, and mounting hardware.

4583A64 ..... **Per Set** $39.46

Optional Pedestal Stand

For *general purpose grinders*. Has a water pot and a tool tray. Overall height is 31″. Mounting surface is 11″ Lg.×10″ Wd. Weight is 46 lbs.

4583A93 ..... **Each** $105.75

Heavy Duty 12″ Pedestal Grinders

Made of steel with a cast iron pedestal, these powerful grinders accept 12″ Dia.× 2″ Wd.×1¼″ grinding wheels (sold separately, see pages 2641 and 2642). Pedestals are 30″ high with a 20″ Wd.× 17″ Dp. base.

Grinders feature overload-protected manual starters. All come furnished with cast iron wheel guards with a 5″ dia. vent exhaust; adjustable tool rests and spark breakers; two tool trays; a water pot; and two lighted, adjustable, acrylic eye shields (60-watt light bulbs required, but not included).

All include leads for hardwiring and meet OSHA requirements.

hp	No-Load rpm	Volts	Hz	ph.	Wt., lbs.		Each
2	1,800	115/230	60	1	472	4606A41	$3,167.28

3	1,800	208-230/460	50/60	3	467	4606A61	3,097.74

Steel-Frame Eye Shields

Protect yourself by mounting these shields on small bench grinders and buffers, lathes, planers, and spot welders. Frame is heavy-gauge steel; panel is clear polycarbonate. Shields swivel up and down. Mounting clamp and bracket included.

Panel Size	Shields	Each	Extra Panels	Each
5″×6″	4411A1	$23.90	4411A2	$7.30
6″×8″	4411A3	27.70	4411A4	9.70

Dust Collectors for Heavy Duty Grinders

Mount these dust collectors on heavy duty 7″-12″ pedestal grinders and grinder-buffers. All have a ½-hp, 115 VAC, 60 Hz, 1-phase totally enclosed fan-cooled (TEFC) motor. Include an air-control valve that directs power to the wheel in use (required by OSHA for 10″ and 12″ grinders); heavy-gauge steel housing; powerful maintenance-free fan; hoses; fittings; brackets; switch; 8-ft. power cord with three-prong plug; and flame-retardant, reusable cloth filter bag with 4″ dia. opening. Approx. weight is 60 lbs.

For Grinder Size	Air Movement, cu. ft./min. Unit Total	OSHA Rqmt. Per Wheel		Each
7″	440	220	4578A51	$934.63
8″	440	220	4578A52	934.63

12″	440	390	4578A54	1,019.62
Replacement Filter Bag			4578A61	60.93

Dust-Collecting Pedestal for Bench Grinders

The top is 15″ Lg.×11″ Dp. for mounting bench grinders and buffers with a 5″-10″ wheel dia. Base is 18⅜″ Lg.×15¾″ Wd. Pedestal has a ⅓ hp motor. Operates on 120 VAC, 60 Hz and has a 5′8″ cord with 3-prong plug. Includes two expandable, 3⅛″ ID universal hoses; hose clamps; and filter.

		Each
Dust Collector	4552A21	$1,027.43
Repl. Filter	4552A31	$24.00
Repl. Spark Arrestor	4552A22	35.42

Caution: *Use only accessories that have a greater rpm rating than the no-load rpm of the grinder you choose.*

Bench-Top Disc Sanders

Designed for use with adhesive-backed sanding discs, these sanders are furnished with an 80-grit aluminum oxide sanding disc, tilting disc table, and power cord with three-prong plug. For sanding discs, see pages 2662-2663. No-load rpm is 1,725.

General Purpose— With a built-in dust fan and hose, this sander runs clean. Hose has a 2¼″ ID connector that attaches to any standard shop vacuum. Furnished with a 6-ft. power cord. UL listed. ***Optional miter gauge*** lets you perform angled sanding operations and has adjustable positive-stop locks at 90° and 45°.

Heavy Duty— These sanders stand up to heavy use. They include a totally enclosed fan-cooled motor, wrap-over guard, miter gauge for angled sanding operations, on/off switch, and 8-ft. power cord.

Combination Belt and Disc Sanders

Get the convenience of a belt and disc sander in one tool. Belt tilts to operate in the horizontal position, vertical position, and at any angle in between. Sanders have a totally enclosed fan-cooled motor, adjustable belt tracking control, tilting belt and disc tables, and a dust port for connecting the unit to a dust collector or vacuum system. All are furnished with a miter gauge for angled sanding operations, on/off switch, and power cord with three-prong plug (unless noted).

For sanding belts, see pages 2665-2668 and page 2676. For sanding discs, see pages 2662-2663.

A Standard Duty Bench-Top 6″×48″ Belt and 9″ Disc Sander— This direct drive unit has a cast aluminum belt table and a cast iron disc table; both tilt 45° down. Also includes a 4″ dia. dust port, 80-grit aluminum oxide sanding belt, 60-grit aluminum oxide sanding disc, and 5-ft. power cord. Not for sanding metals. ***Optional floor stand*** is 28½″ Ht.×16″ Wd.×29″ Dp.

B Heavy Duty Floor Model 6″×48″ Belt and 12″ Disc Sanders— These hefty V-belt drive sanders have an upper guard and an adjustable platen that can be removed for contour sanding. The belt and disc tables are made of cast iron and tilt 20° up and 45° down. Both have a one-piece heavy duty steel stand and a UL listed/CSA certified motor. Include a 3″ dia. dust port, dust deflector, belt guard, 80-grit aluminum oxide sanding belt, 50-grit aluminum oxide sanding disc, and 6-ft. power cord.

Also Available: Replacement parts. Please ask for 4739A4 and specify part.

Belt Sanders

Optional Floor Stand

Perform rough to finishing sanding jobs on various surfaces with these versatile quick-change sanders. Easily change belts in just minutes to reduce downtime. Sanders include a totally enclosed fan-cooled motor, belt control for proper tension, on/off switch (unless noted), belt guard, 80-grit aluminum oxide sanding belt, and power cord with three-prong plug (unless noted). For sanding belts, see pages 2665-2668 and page 2676.

Styles C&D include a contact wheel and a platen that detaches for contour sanding. ***Styles E-G*** have an aluminum or cast iron drive wheel.

Optional floor stand (sold separately) is 32″ Ht.×21″ Wd.×12″ Dp.

C Light Duty Vertical 1″×42″ Belt Sander— Weighing just 32 lbs., this sander is an economical choice for any sanding application. Work table is steel and tilts 20° up and 45° down.

D Standard Duty Two-Position 2″×48″ Belt Sander— Sander operates in vertical and horizontal positions. It has a steel work table that tilts 20° up and 45° down. A full-length hinge on the belt guard gives you easy access to the belt.

E&F Heavy Duty Two-Position 4″×36″ Belt Sanders— Sanders operate in vertical and horizontal positions. They have a steel work table that tilts 20° up and 45° down. ***Style F*** is mounted on a 100 cfm self-contained dust collector. Dust collector is 32″ Ht. ×14″ Wd. ×12″ Dp.

G Heavy Duty Multiposition 6″×48″ Belt Sanders— The belt on these sanders operates in a horizontal position, a vertical position, and at any angle in between. Sanders have a reversible belt platen and a cast iron work table that tilts 15° up and 45° down.

● Surface feet per minute. ■ Sanding belt is 80-grit aluminum oxide.

Electric Narrow-Belt Sanders

C *Milwaukee*

D *Makita*

Turn to these compact sanders for sanding and deburring in cramped quarters. Every sander comes with 10 aluminum oxide sanding belts of varying grits. Belt changes are fast and easy. Sanders are double insulated and include a power cord with two-prong plug. All are UL listed, CSA certified, and meet OSHA requirements. For sanding belts, see pages 2665-2668 and page 2676.

***C** Milwaukee Sander—*With its ½″ wide sanding belt, this sander is hard to beat when it comes to intricate work. It has an adjustable head (180°), three-position handle, a spindle lock that releases tension for fast belt changes, and a paddle switch. Operates on 120 VAC, 60 Hz, 5.5 amps.

***D** Makita Sander—*Belt speed is adjustable, so you can use this sander on a variety of materials. It has a removable multiposition side handle, speed lock-on button for continuous operation, and a trigger switch. Operates on 115 VAC, 60 Hz, 5.0 amps.

Air-Powered Narrow-Belt Sanders

E

F

G

The narrow belts on these air-powered tools can reach into corners and other tight spots. Sanders have positive belt tracking and belts are easy to change. All operate on 90 psi and have a ¼″ NPT female air inlet. Recommended hose size is ⅜″ ID. For sanding belts, see pages 2665-2668 and page 2676.

***E** Maintenance Sanders—*The head on these sanders rotates a full 360° and locks in place. They have a rear exhaust, an exhaust silencer, and a variable-speed throttle control lever. All include one 120-grit aluminum oxide sanding belt.

***F&G** Dynabrade Heavy Duty Sanders—*These top-rated tools sand, debur, blend, and polish. Their lightweight, insulated composite housing reduces vibration and won't transmit cold air to the operator's hand. They have a front exhaust and a control screw for speed adjustment.

(F) Dynafile I—Handle adjusts to let you choose the most comfortable position. Includes a variable-speed throttle control lever. Furnished with one 60-grit and one 120-grit zirconia alumina sanding belt.

(G) Dynafile II—Head pivots a full 360° for reaching difficult spots. Model 4669A12 comes with one 60-grit, one 80-grit, and one 120-grit zirconia alumina sanding belt and one nylon mesh sanding belt. Model 4669A13 comes with one 60-grit and one 80-grit zirconia alumina sanding belt.

Air-Powered Sheet Sanders

Economy

Also known as jitterbug sanders, these tools are similar to the sanders on page 2648, only air powered. They operate in an orbital motion for a consistent finish. Sanders accept standard sanding sheets (not included) and come with a backup pad. All operate on 90 psi and have a 1/4″ NPT female air inlet and built-in air speed regulator with rear exhaust. Recommended hose size is 3/8″. For sanding sheets, see pages 2652-2653 and page 2674.

Economy Sander— For occasional use and light sanding jobs. Motor is 0.25 hp; average cfm is 4. Sander is 8″ long and weighs 4 1/2 lbs.

Maintenance Sander— More durable than the economy sander, this sander can handle most applications. Motor is 0.30 hp; avg. cfm is 6. Sander is 7″ long and weighs 4 3/8 lbs.

	Sheet Size	No Load Orbits/ Minute	Sanders	Each	Replacement Backup Pads	Each
Economy	3 2/3″×9″	6,500	4624A1	$110.66	4624A2	$20.70

D

E

F

G&H

J

No matter where or what you need to sand, these sanders take the work out of your hands. All operate on 90 psi and have a 1/4″ NPT female air inlet. All come with one backup pad (unless noted). For sanding discs, see page 2657 and pages 2660-2664.

C-E Economy Sanders— Designed for occasional use and light sanding applications.

(C) Rotary-Action Sander— This compact sander is designed to get into tight spaces and has a built-in speed regulator. Use with quick-change style discs.

(D) High-Speed Rotary-Action Sander— This pistol-grip sander comes with three backup pads. Use with standard fiber-back sanding discs.

(E) Dual-Action Sander— Rotary and orbital action combine to produce a scratch-free, flawless finish. Sander has a built-in speed regulator. Use with adhesive-back sanding discs.

F-J Heavy Duty Sanders— Rated for continuous use.

(F) Rotary-Action Right-Angle Sander— Lightweight and compact for use in tight spots. Use with quick-change style metal fastener discs.

(G) Swirl-Free Sanders— You'll get a super-fine finish from these ergonomically designed tools. Also known as random orbital sanders, they have a speed control lever and low-profile pad for better control. Use with adhesive-back sanding discs.

(H) Dust-Collecting Swirl-Free Sanders— Just like Style G, but with a self-generating vacuum that comes ready to hook up to a portable self-contained dust-collection system (sold separately).

(J) Large Swirl-Free Sander— Provides the same swirl-free finish as Style G sanders, but uses a larger disc for faster work. Sander has a safety-lock lever switch and side handle for left- or right-hand operation. Use with 11 1/4″ hook and loop sanding discs.

Dust-Collection System for Style H ..... 82355A85 **Each** $47.60

★ Has a 1/4″ collet. ♦ Does not include backup pad. ♥ Screw mount.

Pole Sanders

If your sanding job seems unreachable, try one of these long pole sanders. They're ideal for use on ceilings and high walls.

Standard Pole Sander and Sanding Sheets

With a 48″ long hardwood handle and an aluminum base plate, this sander is both economical and durable. Designed for use with 4 3/16″ × 11 1/4″ sanding sheets (sold separately).

		Each
Standard Pole Sander	8227A11	$15.29
Replacement Pole	8227A13	$8.73

Sanding sheets are silicon carbide and measure 4 3/16″ × 11 1/4″.

Screencloth sheets have abrasive grit on both sides and an open-mesh backing that resists clogging when used on plaster and wood. Use wet or dry.

Paper sheets have a moderately stiff backing.

	Grit No.	Pkg. Qty.		Per Pkg.
Screencloth	120	5	8227A42	$8.04
Screencloth	220	5	8227A52	7.74
Paper	80	25	8227A22	7.52
Paper	100	25	8227A32	6.73

Dust-Free Orbital Pole Sander and Sanding Sheets

Designed to work with our no-filter-change wet/dry vacuums, this pole sander uses the suction from the vacuum to both drive the orbital head and extract drywall dust. For vacuum, see 7034T11 on page 2069. Sander comes with an orbital head; 85″ chrome-plated steel extension pole; three 3 1/4″ × 8 1/4″ sanding sheets in 120, 150, and 180 grits; bearing oil; hose adapter for 1 1/2″ hose; and hand sander adapter.

8204A21 ..... **Each** $119.96

Sanding sheets are aluminum oxide and treated to resist loading. Size is 3 1/4″ × 8 1/4″. Package quantity is 5.

To Order: Please specify grit: 100, 120, 150, 180, or 220.

8204A31 ..... **Per Pkg.** $5.80

Electric Spindle Sanders

Finally there's an easier way to sand curved surfaces. The spindles on these sanders rotate and oscillate for aggressive material removal.

Stationary Bench-Top Sander

The table on this sander tilts down 45 degrees for easy bevel sanding. It has a built-in 2″ dust port and comes with five drum assemblies and sleeves, one in each of the following diameters: 1/4″, 1/2″, 5/8″, 1 1/2″, and 2″. Has a 6-ft. power cord with three-prong plug. Table size is 14 1/2″ × 14 1/2″. No-load rpm is 1,725; spindle oscillates 30 times per minute. Motor is 1/2 hp, 1 phase, 110 VAC, 60 Hz, 7.5 amps. Weight is 77 lbs. For sanding sleeves see 4719A on page 2670.

8216A21 ..... **Each** $530.75

Portable Hand-Held Sander, Drum Kit, and Sanding Sleeves

Portable Hand-Held Sander— This Porter-Cable Model 121 sander is double insulated and perfect for use on edges. It comes with a 2″ sanding drum, 150-grit aluminum oxide sanding sleeve, adjustable edge guide, vacuum attachment, and 7-ft. power cord with two-prong plug. Sander is variable speed; no-load rpm is 2,400-3,600. Spindle oscillates 38-60 times per minute. Operates on 120 VAC, 25-60 Hz, 6 amps. UL listed. Meets OSHA requirements. Weight is 10 lbs.

8244A11 ..... **Each** $328.95

Quick-Release Drum Kit— Includes three drum/adapter pairs, one in each diameter: 3/4″, 1″, and 1 1/2″.

8244A41 ..... **Each** $50.77

Sanding Sleeves— **To Order:** Please specify grit: 50, 150, or 220.

Size, Dia. × Ht.	Pkg. Qty.		Per Pkg.
1/2″ × 4 1/2″	4	8244A31	$8.89
3/4″ × 4 1/2″	3	8244A32	7.48
1″ × 4 1/2″	3	8244A33	7.14
1 1/2″ × 4 1/2″	2	8244A34	7.77
2″ × 4 1/2″	2	8244A35	8.63

Electric Triangular Pad Detail Sander and Sanding Sheets

Sander

Eliminate the need for hand sanding with this electric detail sander. It uses triangular hook and loop sanding sheets to smooth surfaces in confined areas. Sander is double insulated and has a variable-speed control dial, long-lasting three-position backup pad, soft-grip handle, dust extraction port, and 6-ft. power cord with two-prong plug. It includes 20 triangular sanding sheets, four sanding plates, a polishing pad, one flat extension, one oval extension, and a plastic case. Operates on 120 VAC, 50-60 Hz, 2.6 amps. UL listed, CSA certified, and meets OSHA requirements.

No Load Orbits/Minute	Lg.	Wt., lbs.	Manufacturer & Model No.		Each
13,000-19,000	11″	2.4	Bosch 1294VSK	4711A51	$131.67
Replacement Backup Pad				4711A61	$14.30

Sanding Sheets

Specially treated to resist clogging, these triangular sheets are made of aluminum oxide. Use for general purpose sanding on metal and wood. Package quantity is 5.

To Order: Please specify 40, 60, 80, 100, 120, 180, 240, 320, or 400 grit.

For Sander Model	Side Lg.	Adhesive Backed	Per Pkg.	Hook and Loop	Per Pkg.

Wide-Face Electric Finishing/Sanding Tool

Even the largest surfaces are no match for this wide-face tool. Use it to debur, dull, roughen, sand, brush, and polish.

A variable-speed control dial lets you choose no-load speeds from 950-3,700 rpm. A built-in electronic control keeps speed constant under load for a uniform finish. Includes a solid safety guard to protect your hands. Tool also includes an 80/100-grit flap wheel and a 10″ power cord with two-prong plug. Motor operates on 110 VAC, 60 Hz, 12.27 amps. Tool is 17″ long and weighs 7.25 lbs.

Finishing/Sanding Tool

		Each
Finishing/Sanding Tool	48015A11	$931.64

Sanding and Nylon Mesh Abrasive Flap Wheels

Sanding Wheels— Aluminum oxide. 4″ Dia. × 2″ Wd.

To Order: Please specify 50, 60, 80, 120, 180, or 240 grit.

48015A2 ..... **Each** $25.93

Nylon Fleece Abrasive Wheels— Aluminum oxide. 4″ Dia. × 4″ Wd.

To Order: Please specify grit: 180 or 280.

48015A3 ..... **Each** $47.09

Combination Sanding and Nylon Mesh Abrasive Wheels— Aluminum oxide. 4″ Dia. × 4″ Wd.

To Order: Please specify 80 or 180 grit.

48015A4 ..... **Each** $49.62

Optional Accessories

Drive Roll— With this attachment, you can easily sand around the outside of pipe, tubing, and metal railing systems. Use with sanding belts (sold separately).

48015A16 ..... **Each** $111.27

Belts— Zirconia alumina are 1 5/8″ Wd. × 24″ Lg; nylon 1 3/16″ × 26″ Lg.

About Sanding Abrasives

UNDERSTANDING GRIT NUMBERS

The following information applies to sanding abrasives. For information about nylon mesh abrasives, see page 2674.

Sanding is often a process of using progressively finer grit sizes to achieve a smooth finish. Each finer grit size removes scratches from the previous grit size. If your job involves material removal with little concern for the finish, a single grit may be all you need. If material removal and producing a fine finish are important, use a sequence of grit sizes.

Grit numbers represent the size of abrasive grain particles used in sanding products. The lower the grit number, the larger the particle size and the rougher the finish. The larger the number, the smaller the particle size and the finer the finish.

Grits	Grade	General Guidelines
16, 24	Extra Coarse	***Heaviest Roughing and Shaping—*** For very heavy, rough sanding. These grits remove the greatest amount of material from the workpiece in the shortest amount of time.
36, 40, 50	Coarse	***Intermediate Sanding—*** For further deburring and shaping. *Coarse* grades are for fairly heavy material removal and sanding deep imperfections. *Medium* grades are for surface preparation, rounding corners, and rough sharpening. Also for removing shallow imperfections, depressions, scratches, blemishes, and sanding marks.
60, 80, 100	Medium	
120, 150, 180	Fine	***Smoothing—*** The final step in many sanding jobs. Use for finishing before painting and staining as well as between coatings (varnish, lacquer, or paint) on wood and paint finishes.
220, 240, 280	Very Fine	
320, 360, 400	Extra Fine	***Polishing—*** For blending and producing a high sheen on surfaces. Also for use with wood and paint finishes; use as a step between finish coats or after the final coat.
500, 600, 800	Super Fine	
1200, 1500, 2500	Ultra Fine	***Final Finishing—*** Produce uniform, precision finishes.

ABRASIVE GRAINS

Aluminum Oxide— The most common abrasive. It's extremely tough and fracture resistant. Use for material removal and finishing on metal and wood. More durable than silicon carbide.

Zirconia Alumina— The best abrasive for rugged, heavy material removal on metal and wood. The grit particles continuously produce new sharp points.

Ceramic Aluminum Oxide— Harder, tougher, and more dense than aluminum oxide. Like zirconia alumina, the grit particles continuously produce new sharp cutting edges. Best for medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels.

Silicon Carbide— A superior abrasive for penetrating and cutting fast under light pressure. Use it on aluminum, brass, bronze, magnesium, titanium, glass, rubber, plastics, soft woods, and enamel. Wears out faster than aluminum oxide if used on wood.

Garnet— Cuts slower, but produces a smoother surface on wood than aluminum oxide of the same grit number. It's widely used in woodworking, particularly for finishing. Not for metalworking because the grains dull too rapidly.

Emery— Blocky-shaped grit particles cut slowly, producing a polished surface. Use on metal.

Crocus— With fine grains, crocus is primarily used for cleaning corrosion off polished metals. Also excellent for polishing gold and other soft metals where minimal material removal is desired.

BACKINGS

Abrasive grain is applied to backings made of fiber, cloth, paper, and plastic. ***Fiber backings***, the most durable backings, are very hard, but not as flexible as paper or cloth. ***Cloth backings*** are more durable than paper; they resist tearing and better tolerate continual bending and flexing during use. Products with ***paper backings*** are generally more flexible than cloth. ***Plastic backings*** are very uniform, making them good for polishing, lapping, and precision surface finishing.

GRAIN COVERAGE

Most sanding products are made with grit particles covering 100% of the backing. This results in longer abrasive life and better quality finishes. Clog-resistant sanding products are different because they have gaps or open spaces between grit particles. These gaps give sanding dust and debris a place to collect, improving sanding efficiency on materials such as wood, plaster, soft metals, and fiberglass. Some clog-resistant products also have an additional surface treatment (zinc stearate) to further resist clogging.

Sanding Sheets

For information about sanding abrasives, see page 2651.

Aluminum Oxide Cloth Sanding Sheets

The most popular choice for general purpose sanding of metal and wood. All are 9″×11″.
Dry Sheets—36-60 grits have a strong, stiff backing; 80-500 grits have a flexible backing.
Waterproof Sheets—Unlike dry sheets, these products resist water as well as grease, chemicals, cutting fluids, and other solvents that may be present when sanding, deburring, cleaning, or polishing. Backing is flexible.

60-Piece Dry Sheet Assortment

Excellent for maintenance and small jobs, this assortment contains 10 sheets in each of the following grits: 80, 120, 150, 180, 240, and 320.

4660A14 ..... **Per Asst.** $47.38

Aluminum Oxide Paper Sanding Sheets

When your sanding jobs involve shapes and contours, paper sheets are a great choice. They're more flexible than cloth sheets, so they conform to surfaces better. Use for general purpose sanding of metal and wood. All are 9″×11″. Paper weights are graded on a scale from D to A. D-weight paper is the strongest and most tear resistant; A-weight paper is the most flexible.
Clog-Resistant Sheets—Resist clogging when sanding wood, soft metals, and fiberglass.
Extra Clog-Resistant Sheets—Have a zinc stearate treatment for additional clog resistance.
Waterproof Sheets—Formulated to resist deterioration when used wet.

Clog-Resistant Silicon Carbide Screen Cloth Sanding Sheets

A screen cloth backing allows sanding dust and debris to escape without clogging. Backing is made of flexible meshed nylon. These sheets are particularly good for use on materials such as plaster and wood, and can also be used on nonferrous metals, glass, rubber, plastics, and enamel. Sheets are 9″×11″. Cloth has abrasive on both sides. Use wet or dry.

For information about sanding abrasives, see page 2651.

Silicon Carbide Paper Sanding Sheets

Known as the hardest and sharpest abrasive grain, silicon carbide cuts faster under light pressure than aluminum oxide. Ideal for finishing nonferrous metals such as aluminum, brass, bronze, magnesium, and titanium, as well as other soft metals. Also used on rubber, glass, plastics, soft woods, and enamel. Sheets are 9″×11″.

Clog-Resistant Sheets—Treated with zinc stearate for maximum clog resistance. B-weight paper provides a good balance between flexibility and strength.

Waterproof Sheets—The best choice for wet sanding. C-weight paper is stiff and tear resistant. A-weight paper is more flexible.

Clog-Resistant Sheets

Microfinish Cushioned Silicon Carbide Cloth Sanding Sheets

Get precise, uniform finishes on metal surfaces. Unlike paper- or plastic-backed sanding sheets, these have a flexible cloth backing and a cushioned layer of latex bonded with silicon carbide crystals (unless noted). Use wet or dry. Sheets are 6″×12″. Grit number in parentheses is marked on the sheet.

Grit		Each	Grit		Each
230 (60MX)	4611A329	$9.52	800 (320MX)	4611A314	9.52
280 (80MX)	4611A318	9.52	1200 (360MX)	4611A313	9.52

600 (240MX)	4611A315	9.52			

★ Abrasive is aluminum oxide.

Microfinish Diamond Sanding Sheets

For precise, uniform finishes on extremely hard materials, these polyester plastic-backed diamond sanding sheets are your best bet. Use on glass, ceramics, hardened metals, and composites. A clean alternative to messy compounds and slurries, they also produce a more consistent finish. Use wet or dry. Sheets are 9″×11″. Backing is 3 mils thick.

Grain Size, microns (0.001 mm)	Approx. Grit	Color		Each

Garnet Paper Sanding Sheets for Wood

Sharp cutting edges make garnet paper ideal for use on wood. Not for use on metal because the grains dull too rapidly. Sheets are clog resistant and measure 9″×11″. D-weight and C-weight papers are strong and tear resistant. A-weight paper is more flexible.

Grit	Paper Weight	100/Pkg.	Per Pkg.	15/Pkg.	Per Pkg.

40-Sheet Assortment

You'll get 10 each of coarse, medium, and fine emery sheets, plus 10 crocus cloth sheets.

8233A21 ..... Per Asst. $40.56

Paper Sheets for Sheet Sanders

Tired of ripping up large sanding sheets and ruining your scissor blades? These sheets are conveniently cut to size to fit in common sheet sanders. For sanders, see pages 2634-2635. D-weight and C-weight papers are strong and tear resistant. A-weight paper is more flexible.

Clog-Resistant Aluminum Oxide Dry Sheets—Resist clogging when sanding wood, soft metals, and fiberglass.

Waterproof Silicon Carbide Sheets—The best choice for wet sanding. Ideal for finishing nonferrous metals such as aluminum, brass, bronze, magnesium, and titanium, as well as other soft metals. Also used on rubber, glass, plastics, soft woods, and enamel.

For information about sanding abrasives, see page 2651.

Hand Sanding Block

Easy on the hands, this rubber block uses 2¾″×9″ sanding sheets (sold separately) to sand flat and curved surfaces. Slits on both ends of the block allow you to attach sheets over the flat or curved side.

4731A2	Each	$3.57

Designed for use with our hand sanding block, these 2¾″×9″ paper sanding sheets have aluminum oxide abrasive and resist clogging. Use for general purpose sanding of metal and wood. Package quantity is 15.

Grit	Paper Weight		Per Pkg.	Grit	Paper Weight		Per Pkg.
80	D	4731A54	$3.14	120	C	4731A52	$2.74
100	C	4731A53	2.76	150	C	4731A51	2.74

Easy-Feed Hand Sanding Blocks

Store an adhesive-back sanding roll in this block—simply cut off worn abrasive and pull out new abrasive as needed. (Rolls sold separately.) Blocks have a cushioned pad and molded hand grip. The flat surface sands corners and the rounded end sands curves.

Block Size, Wd.×Lg.		Each
2½″×5″	8224A11	$14.22
3¼″×5¾″	8224A12	20.60

Designed for use with our Easy-Feed Hand Sanding Blocks, these adhesive-back paper sanding rolls have silicon carbide abrasive and resist clogging. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Grit	Roll Lg.	*For 2½″ Block*	Per Roll	*For 3¼″ Block*	Per Roll

280	115″	8224A21	4.27	8224A31	4.86

Sponge-Back Aluminum Oxide Perforated Sanding Rolls

A separate ⅛″ thick foam backing behind the paper backing provides even pressure, particularly around contours. The foam is also absorbent and good for wet sanding. Rolls are perforated into 200 sheets, each 4½″×5″. All have aluminum oxide abrasive and are zinc stearate coated to resist clogging. Grit number in parentheses is marked on the roll.

Grit		Per Roll	Grit		Per Roll
120 (P150)	8271A11	$62.84	320 (P400)	8271A15	$62.84
180 (P180)	8271A12	62.84	360 (P500)	8271A16	62.84

80, 120	1	4023A83	4.44

■ 75° angled sides.

Super Flexible Aluminum Oxide Sponges

Abrasive is on the top. Sponges conform exceptionally well to small contoured surfaces. Use for general purpose sanding of metal and wood.

Grit	Size	Pkg. Qty.		Per Pkg.
100	5½″×4½″×3/16″	2	4023A63	$2.52
150	5½″×4½″×3/16″	2	4023A62	2.52
220	5½″×4½″×3/16″	2	4023A61	2.52

Clog-Resistant Sponges

Abrasive is on the top, bottom, and two sides. Grains are coated for clog resistance and long life. 36 and 60 grits are silicon carbide. Use for paint stripping. 80-150 grits are ceramic aluminum oxide. Use for bare surface sanding. 180 and 320 grits are aluminum oxide. Use for sanding between coats.

Grit	Size		Each
36	3¾″×2⅝″×1″	8221A11	$3.64
60	3¾″×2⅝″×1″	8221A12	3.63
80	3¾″×2⅝″×1″	8221A13	3.64
100	3¾″×2⅝″×1″	8221A14	3.63
150	3¾″×2⅝″×1″	8221A15	3.63
180	3¾″×2⅝″×1″	8221A16	3.64
320	3¾″×2⅝″×1″	8221A17	3.64

Heavyweight Aluminum Oxide Sanding Rolls

Compared to other aluminum oxide rolls, these have a heavier, stiffer backing for added strength. Use for general purpose sanding of metal and wood.

Paper rolls are more flexible than cloth. Paper weight is F for durability.

Cloth rolls are more durable. They resist tearing and can withstand continual bending and flexing during use.

For information about sanding abrasives, see page 2651.

Aluminum Oxide Cloth Sanding Rolls

Just pull out the length of abrasive you need and tear it off. Also called shop, utility, and handy rolls, they come in a dispenser pack (unless noted). For use on metal and wood.

Dry Rolls— 36-50 grits have a strong, stiff backing; 60-400 grits have a more flexible backing. 25-yard rolls come on a ribbon-style spool. *Note:* 50-yard lengths in ½″ and ¾″ widths come in two side-by-side 25-yard rolls.

Waterproof Rolls— Unlike dry rolls, these products resist water as well as grease, chemicals, cutting fluids, and other solvents that may be present when sanding, deburring, cleaning, or polishing. Backing is flexible.

Three-Roll Assortments— You'll get three rolls in different grits, furnished in one dispenser pack.

For information about sanding abrasives, see page 2651.

Silicon Carbide Paper Sanding Rolls

These waterproof rolls are an excellent choice for wet sanding. Abrasive is silicon carbide, which cuts faster than aluminum oxide—even under light pressure. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Grit	Paper Weight	Roll Size, Wd.×Lg.		Per Roll
180	C	3″×25 yds.	47415A35	$28.27
240	C	3″×25 yds.	47415A34	28.27

800	C	3″×25 yds.	47415A29	37.25

Adhesive-Back Aluminum Oxide Cloth Sanding Strips

Cloth Strip on Optional Holder

A pressure-sensitive adhesive backing allows these sanding strips to stick to any holder. Backing is strong, stiff cloth. Use for general purpose sanding of metal and wood. Size is 1″×11″.

Grit	Pkg. Qty.		Per Pkg.	Grit	Pkg. Qty.		Per Pkg.

Emery and Crocus Cloth Sanding Rolls

All of these rolls have a flexible cloth backing.
Emery has blocky-shaped grit particles that cut slowly. Good for polishing metals.
Crocus cloth has a soft abrasive. Use for fine hand-polishing of soft nonferrous metals.

Clog-Resistant Silicon Carbide Screen Cloth Sanding Rolls

Roll

Three-Roll Assortment

A screen cloth backing allows sanding dust and debris to escape without clogging. Backing is made of flexible meshed nylon. These rolls are particularly good for use on plaster and wood, and can also be used on nonferrous metals, glass, rubber, plastics, enamel, and other soft materials. Cloth has abrasive on both sides. Use wet or dry.

320	C	4½″×10 yds.	46585A11	28.44	8223A38	32.56

Hook and Loop Tape Strips— Use with hook and loop rolls above. Stick the tape side to your sanding tool and use the hook and loop side to attach sandpaper.

Size, Wd.×Lg.		Each
4½″×36″	8223A62	$14.88

Holder for 1″ Abrasive Strips

Simply attach a 16″ long strip of any 1″ wide sanding roll material to this holder, and instantly you have a convenient abrasive file. A screw-down clamp keeps the strip in place. Holder is 12″ long, made of zinc-plated steel, and has a cushion-grip handle.

4558A21 ..... Each $10.87

Miniature Sanding Cords and Rolls

Round Sanding Cord

Flat Sanding Roll

The "dental floss" of abrasives, these cords and rolls slip into areas that standard abrasives cannot. Use them for deburring and polishing small-diameter holes, narrow slots, keyways, and grooves. Furnished in 50-foot spools. *Flat sanding rolls* have grit on both the top and bottom.

Aluminum Oxide— More durable than silicon carbide. For general purpose sanding of metal and wood.

Silicon Carbide— Cuts faster under light pressure than aluminum oxide. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Crocus Cloth— For polishing metal. Leaves an ultra-smooth finish.

For information about sanding abrasives, see page 2651.

Heavy Duty Fiber-Back Sanding Discs

A heavy duty fiber backing makes these discs very durable and aggressive—the best choice for heavy stock removal. All have a 7/8″ dia. arbor hole, except the 4″ dia. discs, which have a 5/8″ dia. arbor hole, and the quick-change discs, which have a metal arbor that threads directly onto a 5/8″-11 threaded spindle. All discs require a backup pad (sold separately; see 4728A on this page and 4655A on page 2658). Use on right-angle grinders.

Aluminum Oxide Discs—*Standard* and *quick-change discs* are for general purpose sanding on a wide range of metals. Use *clog-resistant discs* on soft metals, fiberglass, and other materials where clogging is a concern.

Zirconia Alumina Discs—*Standard* and *quick-change discs* cut faster and last longer than aluminum oxide discs. Use on metal and hard wood. *Premium discs* have premium grains and a special coating that reduces heat and discoloration. Good for grinding stainless steel and other heat-sensitive materials.

Ceramic Discs—Harder and tougher than aluminum oxide and zirconia alumina, these discs are for medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, and cast iron.

Standard Disc

Quick-Change Disc

Backup Pads and Pad Adapters

Backup pads fit all right-angle grinders with a 5/8″-11 spindle thread. Disc nut included.

For Disc Dia.	Max. rpm		Each
4 1/2″	18,000	4728A29	$39.49
5″	18,000	4728A31	39.49
7″	8,600	4728A42	44.38
9″, 9 1/8″	7,000	4728A43	60.60

Pad adapters let you convert from a 5/8″-11 spindle thread to the spindle thread listed below.

Female End		Each
3/8″-24	4728A61	$8.30
10 × 1.25 mm	4728A62	10.05
10 × 1.50 mm	4728A63	10.05
1/2″-13	4728A64	24.59

Backup Pad

For information about sanding abrasives, see page 2651.

Cool-Sanding Backup Pads for Fiber-Back Sanding Discs

The spiral rib design forms air flow channels that prevent overheating and extend disc life. These pads are made of extra strong rubber, fabric, and fiberboard.

Disc nuts (sold separately) are necessary for attaching backup pads. Pad adapters (sold separately) let you use these pads on power tools with a 3/8″-24 or 7/16″-20 male spindle thread.

For Disc Dia.	Arbor Hole	Max. rpm	Flexible	Medium	Rigid	Each
4″	5/8″-11	12,000	4655A11	4655A5	4655A21	$13.88
4 1/2″	5/8″	11,000	4655A17	4655A7	4655A33	13.88
5″	5/8″-11	10,000	4655A12	4655A3	4655A22	15.75
7″	5/8″-11	8,500	4655A16■	4655A1	4655A24	23.68
9″	5/8″-11	6,500	4655A15	4655A2	4655A26	28.35
Disc Nut (5/8″-11 Thread) for 4″, 4 1/2″, and 5″ Dia. Pads					4655A27	5.50
Disc Nut (5/8″-11 Thread) for 7″ and 9″ Dia. Pads					4655A28	5.50
3/8″-24 to 5/8″-11 Pad Adapter					4655A31	8.75
7/16″-20 to 5/8″-11 Pad Adapter					4655A32	8.75

■ Max. rpm is 7,000.

Flap Sanding Discs

Angle Flap Disc

Angle Flap Disc

Flat Flap Disc

Made from overlapping pieces of cloth sanding strips bonded to fiberglass hub, these flap discs provide consistent material removal and even finishes in one operation. As the top layer of sanding strips wears away, a new layer is exposed. These discs run cooler than others and do not require backup pads.

Use on right-angle grinders for grinding, deburring, finishing, and blending welds. ***5/8″ arbor*** and ***7/8″ arbor*** discs have unthreaded arbor holes. ***5/8″-11 arbor*** discs have threaded arbor holes that permit quick mounting and removal from the grinder spindle.

Angle Flap Discs— Also known as Type 29 discs, they provide maximum contact with the work surface. They're more aggressive than flat flap discs and work well on curves and contours. Normally operated at a 5° to 15° angle.

Flat Flap Discs— Also known as Type 27 discs, these discs operate more smoothly than angle discs and are less aggressive. They're the best choice for flat surface work. Normally operated at a 0° to 15° angle. *Extra thick discs* have more flaps than standard flap discs to conform to surfaces better. They also last 30% to 40% longer. Use on contoured and irregular surfaces in addition to flat surfaces. *Extra thick aluminum oxide discs for stainless steel* have specially formulated additives for cool cutting and long disc life.

♣ Max. rpm is 13,300. ● Max. rpm is 12,000.

For information about sanding abrasives, see page 2651.

Cool-Grinding Flap Sanding Discs

These discs have overlapping cloth flaps that alternate between zirconia alumina abrasive and lubricating agents. The abrasive flaps aggressively remove material while the lubricating flaps minimize heat to reduce discoloration of the work surface. The flaps are bonded to a fiberglass hub in a circular pattern to enable grinding and finishing in one operation. Backup pads not required.

Angle Flap Discs— Also known as Type 29 discs, they provide maximum contact with the work surface and work well on contours and curves.

Flat Flap Discs— Also known as Type 27 discs, they grind more smoothly than angle discs, but are less aggressive. Great for flat surfaces.

Angle Flap Disc

Long-Lasting Plastic Hub Flap Discs

Short-lived flap discs wearing you down? Unlike fiberglass, the plastic hub on these discs can be sheared away with your workpiece as the abrasive flaps wear down, resulting in longer disc life. Abrasive is cloth-backed zirconia alumina for aggressive material removal.

To Order: Please specify grit: 40, 60, 80, or 120.

Disc Dia.	Arbor Hole	Max. rpm		Each
4½″	5/8″-11	13,300	4216A11	$14.72
4½″	7/8″	13,300	4216A12	14.72

7″	7/8″	8,600	4216A14	30.25

Floor-Sanding Silicon Carbide Discs

When used with commercial floor-buffing machines, these resin-bonded discs are ideal for rough-to-finish sanding of wood floors. Also used for stripping tape from concrete floors. All discs have a 2″ slotted center hole.

The ***20-grit*** discs resist clogging and have a combination cloth and paper backing. The ***36-grit*** and ***80-grit*** discs have a strong paper backing.

	15″ Dia.		16″ Dia.	
Grit		Each		Each
20	47305A244	$6.36	47305A254	$7.28
36	47305A243	4.98	47305A253	5.71
80	47305A241	3.39	47305A251	3.89

Smooth-Finish Cotton-Fiber Sanding Discs

Multiple layers of cotton fiber impregnated with aluminum oxide grain allow these quick-change discs to grind and finish in one step. Discs resist clogging and provide a fine finish on metals. They outlast standard quick-change cloth sanding discs 10 to 1.

Use these discs on right-angle die grinders for grinding welds and blending on flat and contoured surfaces. For best results, use a disc that is one or two grits coarser than a standard cloth sanding disc. A plastic fastener (3M Roloc/Norton Speed-Lok TR style) allows for easy disc changes. Use with disc holders sold below.

Disc holders have a ¼″ diameter shank.

To Order: For discs, please specify grit: 24, 36, 54, 80, 120, 180, or 320.

Discs			Disc Holders		
Dia.		Each	Max. rpm		Each
1″	43835A71	$2.56	40,000	46465A72	$9.79
1½″	43835A72	2.71	30,000	46325A91	9.85
2″	43835A73	3.19	30,000	46325A92	10.85
3″	43835A74	3.77	20,000	46325A93	11.92

Fast-Sanding Aluminum Hub Flap Discs

The rigid aluminum backing plate on these discs provides more support than standard fiberglass backing plates for very aggressive material removal. Abrasive is cloth-backed zirconia alumina, which is aggressive and long lasting. Also known as Type 29 discs.

To Order: Please specify grit: 36, 40, 60, 80, or 120.

Disc Dia.	Arbor Hole	Max. rpm		Each
4″	5/8″	15,000	4384A21	$7.31
4½″	5/8″-11	13,000	4384A23	9.93

7″	5/8″-11	8,600	4384A26	17.88
7″	7/8″	8,600	4384A25	16.41

Corner-Sanding Flexi-Flap Discs

The abrasive flaps on these discs are set at an angle and more widely spaced than standard discs, allowing them to reach into corners. Backing plate is fiberglass; backing is cloth.

Aluminum Oxide— The most popular abrasive for general purpose work on a wide range of metals.

Zirconia Alumina— This long-lasting premium abrasive provides aggressive material removal.

To Order: Please specify grit: 36, 40, 60, 80, or 120.

Disc Dia.	Arbor Hole	Max. rpm		Each
Aluminum Oxide				
4½″	5/8″-11	13,300	4326A12	$6.45

Sanding Disc Trimmer

Save the usable inner part of a worn disc—this tool works like a can opener to trim the perimeter of the disc down to the next smaller size. Works on paper, cloth, and fiber discs from 3″ to 9″ with a 7/8″ center hole.

Trimmer has two 11/32″ holes for bench mounting (screws not included).

Note: Not for use with flap discs.

		Each
Trimmer	4710A12	$109.67
Repl. Upper Cutting Blade	4710A13	21.91
Repl. Lower Cutting Blade	4710A14	21.91

For information about sanding abrasives, see page 2651.

Quick-Change Cloth Sanding Discs

Style A
Metal (unless noted) fastener equivalent to Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles.

Style B
Plastic fastener equivalent to 3M Roloc and Norton Speed-Lok TR styles.

Style C
Plastic snap-on fastener equivalent to Merit Power-Lock Type I style.

The fastener on the back of these discs allows you to easily swap one disc for another. Choose from three types of disc fasteners: *Style A* is a metal (unless noted) fastener equivalent to Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles; *Style B* is a plastic fastener equivalent to 3M Roloc and Norton Speed-Lok TR styles; and *Style C* is a plastic snap-on fastener equivalent to Merit Power-Lock Type I style. Disc holder required (sold separately below).

Discs have a strong cloth backing and are normally used on right-angle die grinders.

Aluminum Oxide Discs— The most popular abrasive for general purpose work on metal and wood. ***Long-Lasting Multilayer Aluminum Oxide Discs—*** Grains are compacted for longer disc life and uniform finishes. ***Silicon Carbide Discs—*** For nonferrous metals, glass, rubber, plastics, soft woods, enamels, and other soft materials. ***Zirconia Alumina Discs—*** Grit particles continuously produce new sharp cutting points, resulting in longer disc life. Perfect for aggressive cutting and heavy material removal on all types of metals and hard woods. ***Ceramic Discs—*** Similar to zirconia alumina discs, but provide a more consistent finish. Use for medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels. ***Premium Ceramic Discs—*** Similar to ceramic discs, these discs have sharper abrasive grains and a special coating that allow them to remove material more aggressively and last up to 200% longer.

To Order: Please specify fastener style: Style A (Metal, unless noted); Style B (Plastic); or Style C (Plastic Snap-On), unless noted. See fastener descriptions and illustrations at left.

123-Piece Aluminum Oxide Quick-Change Disc Assortment

The most commonly used discs and holders in one convenient assortment. You'll get 10 each of the 36, 60, 80, and 120 grit aluminum oxide discs (in 1″, 2″, and 3″ sizes) with a Style A (Norton Speed-Lok TS, Standard Abrasive SocAtt, and 3M TSM styles) disc fastener, plus one each of 1″, 2″, and 3″ disc holders with 1/4″ dia. shank.

4701A61 ..... **Per Asst.** $115.69

For information about sanding abrasives, see page 2651.

Quick-Change Flap Sanding Discs

The plastic fastener (3M Roloc/Norton Speed-Lok TR style) on these discs allows for quick disc changes. Fasteners attach to a disc holder with a 1/4″ dia. shank (disc holder required; sold separately). Discs are made of cloth sanding strips, and are typically used on right-angle die grinders.

Angle flap discs have a longer flap than flat discs. The flaps extend over the disc's edge and are set at a higher angle for more flexibility when sanding corners and irregular shapes. ***Flat flap discs*** are stiffer than angle discs for work on flat surfaces.

Aluminum oxide is for general purpose work on metal and wood. ***Zirconia alumina*** is a premium abrasive for faster, more aggressive material removal on metal and wood. Grit particles continuously produce new sharp cutting points.

Heavy Duty Quick-Change Fiber-Back Sanding Discs

A strong fiber backing and ceramic abrasive grains make these discs last longer than aluminum oxide discs when used for medium to heavy material removal. Use on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels. For use on right-angle die grinders.

A quick-change fastener secures the discs to the required disc holder (sold separately). Choose from two types of disc fasteners: *Style A* is a metal fastener equivalent to Standard Abrasive SocAtt and Norton Speed-Lok TS styles. *Style B* is a plastic fastener equivalent to 3M Roloc and Norton Speed-Lok TR styles.

To Order: For discs, please specify type of fastener: Style A (Metal) or Style B (Plastic).

Style A Metal Fastener

Style B Plastic Fastener

Flexible-Edge Quick-Change Cloth Sanding Discs

The outer 3/8″ edge of these discs is very flexible so it won't mar or gouge your work. Use discs for sanding a radius or contour where the stiff edge of a regular disc would gouge. Choose from two types of disc fasteners: *Style A* is a metal fastener equivalent to Norton Speed-Lok TS, Standard Abrasive SocAtt, and 3M TSM styles; and *Style C* is a plastic snap-on fastener equivalent to Merit Power-Lock Type I style. Fasteners attach to a disc holder with a 1/4″ dia. shank (disc holder required; sold separately). Discs have a cloth backing and are typically used on right-angle die grinders.

Aluminum oxide is for general purpose work on metal and wood. ***Zirconia alumina*** is a premium abrasive for faster, more aggressive material removal on metal and wood. Grit particles continuously produce new sharp cutting points.

To Order: Please specify disc fastener style: Style A (Metal) or Style C (Plastic Snap-On).

Disc's flexible outer edge overhangs disc holder

Sanding Disc Adhesive and Cleaner

Adhesive— Attach your paper- or fiber-back sanding discs to backup pads with this heat-resistant (up to 140° F) adhesive. Not for use with cloth-back discs.

5-oz. Tube ..... 4705A5 **Each** $19.16

Adhesive Cleaner— Remove adhesive from sanding pads and platens and get a clean surface for new discs. This citrus-based cleaner removes grease, tar, oil, solvent-based residue, and other residual dirt. This product is compliant under all state VOC rules in effect on October 1, 2008.

32-oz. Bottle ..... 7984T13 **Each** $9.77

For information about sanding abrasives, see page 2651.

Adhesive-Back Cloth Sanding Discs

Disc and Disc Holder

A coating of pressure-sensitive adhesive (PSA) allows these discs to stick to a backup pad, machine platen, disc holder, or hand sanding pad (holders and pads sold separately). *Note:* To maintain strong adhesion, clean the holder/pad surface with a mild alcohol before applying. Do not use aggressive cleaning solvents such as MEK or acetone, which can damage the adhesive.

Aluminum Oxide Discs— For general purpose work on metal and wood. ***Clog-Resistant Aluminum Oxide Discs—*** Prevent clogging on soft metals, soft woods, fiberglass, and similar materials. ***Silicon Carbide Discs—*** Cut faster under light pressure than aluminum oxide discs. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials. ***Zirconia Alumina Discs—*** A long-life abrasive for aggressive material removal on metal and wood.

6"	4738A22	5.75	4738A24	12.37

For information about sanding abrasives, see page 2651.

Adhesive-Back Paper Sanding Discs

Furnished on rolls for your convenience, these discs have a pressure-sensitive adhesive (PSA) coating for simple disc changes. Paper backings provide more flexibility than cloth backings. All except the ceramic aluminum oxide discs have a zinc stearate treatment for clog resistance. Backup pads required (sold separately). For use on portable disc sanders.

Clog-Resistant Aluminum Oxide Discs— The most popular abrasive for general purpose work on metal and wood. Backing is heavy duty paper. Choose discs without holes or discs with 3/8″ holes that aid vacuum sanders in dust removal.

Clog-Resistant Premium Aluminum Oxide Discs— Cut faster, last longer, and produce more consistent finishes than standard aluminum oxide discs. Backing is lightweight paper. Choose discs without holes or discs with 3/8″ holes that aid vacuum sanders in dust removal.

Clog-Resistant Silicon Carbide Discs— Cut faster under light pressure than aluminum oxide discs, but less durable. Backing is latex paper.

Disc with No Holes

Disc with Five Holes

Disc with Six Holes

Ceramic Aluminum Oxide Discs— Made of high-performance abrasive to produce the most consistent finish from beginning to end. Grain particles continuously produce new sharp cutting points. Backing is strong paper.

Microfinish Cushioned Adhesive-Back Cloth Sanding Discs

Achieve precise, uniform finishes on metal surfaces. Made with a flexible cloth backing and a cushioned layer of latex bonded with silicon carbide crystals (except 2500 grit, which has aluminum oxide crystals). Discs have a pressure-sensitive adhesive (PSA) coating for simple disc changes. Use wet or dry on a portable disc sander.

To Order: Please specify grit: 230 (60MX), 280 (80MX), 320 (100MX), 400 (180MX), 600 (240MX), 800 (320MX), 1200 (360MX), 1500 (600MX), or 2500 (1200MX). *Note:* Grit number in parentheses is marked on the disc.

Ultra-Fine Adhesive-Back Plastic Sanding Discs

Get extremely consistent finishes with these plastic film-back discs that are tear resistant, durable, and perfect for dry- and wet-sanding applications. Pressure-sensitive adhesive (PSA) coating makes disc changes easy. Zinc stearate coated to resist clogging. Has aluminum oxide abrasive. Use on portable disc sanders.

Adhesive-Back Silicon Carbide Paper Sanding Discs

A paper backing gives these adhesive-backed discs more flexibility than discs with a cloth backing. Abrasive is silicon carbide for faster cutting under light pressure than aluminum oxide. Use wet or dry on nonferrous metals, glass, plastics, soft woods, enamel, and other soft materials. Discs are normally used on stationary disc sanders.

For information about sanding abrasives, see page 2651.

Hook and Loop Paper Sanding Discs

Disc with No Holes

Disc with 5 Holes

Disc with 6 Holes

Disc with 8 Holes

Disc and Backup Pad

Switch discs without tearing them. Unlike adhesive-backed discs, these hook and loop discs can be peeled off and reused. They hold securely to a backup pad (required; sold separately). Choose discs without holes or discs with 7/16″ holes that aid vacuum sanders in dust removal. Discs have a light, flexible paper backing and a zinc stearate treatment for clog resistance. Use on portable disc sanders.

Aluminum Oxide—The most popular abrasive for general purpose work on metal and wood.

Silicon Carbide—Cuts faster under light pressure than aluminum oxide, but is less durable. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Premium Aluminum Oxide—Made with a superior grain that lasts longer, cuts faster, and produces a more consistent finish than standard aluminum oxide.

● Screw mount. Designed for use with Large Swirl-Free Sander on page 2649. Max. rpm is 2,400.

Ultra-Fine Hook and Loop Plastic Sanding Discs

Disc without Holes

A plastic backing means these discs produce extremely consistent finishes. They're durable, tear resistant, and perfect for wet-sanding applications. Choose discs without holes or discs with 7/16″ holes that aid vacuum sanders in dust removal. Hook and loop allows for simple disc changes. Abrasive is aluminum oxide; discs are zinc stearate coated to resist clogging. Use wet or dry on portable disc sanders.

Dust- and Clog-Free Hook and Loop Cloth Sanding Discs

The mesh cloth backing on these discs allows for very efficient dust removal, eliminates clogging, and extends disc life. Hook and loop allows for simple disc changes. Abrasive is aluminum oxide. Use on portable disc sanders with multihole backup pads (sold separately), or use with five-, six-, and eight-hole vacuum sanders.

Contour-Conforming Hook and Loop Foam Sanding Discs

Made of flexible foam, these sanding discs conform to contoured shapes, corners, and sharp edges. They also apply even pressure, resulting in consistent finishes. Hook and loop allows for simple disc changes. Discs are 6″ dia. Abrasive is silicon carbide. Use wet or dry on portable disc sanders.

For information about sanding abrasives, see page 2651.

Ceramic Aluminum Oxide Sanding Belts

Advanced ceramic aluminum oxide (also known as seeded gel abrasive) allows these belts to remove material at a consistent cut rate because the grit particles continuously produce new sharp cutting edges. A special coating reduces clogging and results in less burn. Use on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels. The belts have a strong cloth backing. Use wet and dry.

Premium Ceramic Aluminum Oxide Sanding Belts

With the most advanced ceramic aluminum oxide abrasive (also known as seeded gel abrasive), these belts last longer, cut faster, and cut cooler than standard ceramic aluminum oxide belts. A special coating improves performance on tough materials, such as stainless steel and Inconel. Belts have a strong cloth backing and can be used wet and dry.

Long-Life Aluminum Oxide and Ceramic Blend Sanding Belts

The mix of aluminum oxide and ceramic aluminum oxide gives these belts long life and a consistent cut rate. A special coating reduces clogging and heat buildup. Use on wood, and for medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels. Belts have a strong cloth backing. Color is purple.

Zirconia Alumina Sanding Belts

Zirconia alumina abrasive grains are sharper than aluminum oxide, allowing for more aggressive material removal. Ideal for heavy material removal on metal and wood. The zirconia alumina abrasive continuously produces new sharp cutting points, resulting in longer life. Belts have a strong polyester cloth backing. Use wet and dry.

Also Available: Other belt sizes and grits. Please ask for 4714A999 and specify belt size and grit.

Aluminum Oxide Sanding Belts

The most popular choice for general purpose sanding of metal and wood. These belts contain aluminum oxide grains, which are extremely tough and fracture resistant. Belts have a strong cloth backing that resists tearing and is flexible.

To Order: Where applicable, please specify grit.

Clog-Resistant Aluminum Oxide Sanding Belts

Open space between the abrasive grains prevents sanding dust from clogging the belt. Also known as open-coat sanding belts, they have a strong cloth backing, and are particularly good for use on soft, clog-prone materials such as wood, fiberglass, and some soft metals. **Also Available:** Other belt sizes and grits. Please ask for 46495A999 and specify belt size and grit.

Waterproof Aluminum Oxide Sanding Belts

With a tough polyester cloth backing, these belts stand up to use in wet and dry applications. Belts have a premium aluminum oxide grain. Moderately flexible, and great for use on carbon steels, alloy steels, tough bronzes, and hard woods.
Also Available: Other belt sizes and grits. Please ask for 4713A999 and specify belt size and grit.

For information about sanding abrasives, see page 2651.

Long-Life Structured Aluminum Oxide Sanding Belts

With larger and thicker abrasive grain patterns, these belts last longer than other structured abrasive belts while providing consistent finishes from beginning to end. Backing is made of a flexible cotton. Use on stainless steel, brass, aluminum, titanium, cobalt chrome, and alloys.

Fine Finishing Structured Aluminum Oxide Sanding Belts

The multilayered grain structure on these belts is spaced in a pattern, resulting in extremely consistent finishes and long life. They have a fine grit on a flexible cotton backing. Ideal for use on stainless steel, carbon steel, brass, and aluminum.

Diamond Sanding Belts for Ceramics and Glass

Consisting of synthetic diamond abrasive grains, these sanding belts are ideal for hard-to-sand materials such as ceramics and glass as well as on high nickel alloys and carbides. Belts have a flexible cloth backing.

Belt Sanding Rubber Contact Wheels

The serrations on these wheels prevent heat buildup, allowing for fast, aggressive cutting and longer belt life. Wheels have an aluminum hub and a rubber tire with a medium durometer hardness of 50A-60A. Balanced for smooth, vibration-free operation. Arbor hole accepts a shaft of similar size. For sanding belts, see pages 2665-2668.

Also Available: Other wheel sizes, widths, and durometers as well as replacement serrated tires. Please ask for 46425A999 and specify wheel diameter and width, arbor size, plain or serrated face, and rubber hardness. For replacement serrated tires, please ask for 46425A1 and specify wheel diameter and width.

Belt Sanding Wheels for Bench and Pedestal Grinders

Turn your 6″ bench grinder into a sander. As the wheel rotates, the rubber expands and holds the sanding belt in place. All have a 1″ arbor hole and a durometer hardness of 60A. See page 2666 for sanding belts.

Reducer bushings (sold separately) reduce arbor hole. **To Order:** Please specify bushing ID: ½″, ⅝″, ¾″, or ⅞″.

Wheel Size, Dia. × Wd.	Use with Belt Size	Max. rpm	Wheels	Each	Reducer Bushings	Each

For information about sanding abrasives, see page 2651.

Surface-Conforming Belt Sanding Wheels for Portable Grinders

Achieve fast, even sanding on any shape workpiece with these inflatable wheels. Slip your belt onto the wheel and inflate to desired hardness to achieve any finish. Hub has a threaded air valve. Choose from aluminum and composite hubs. ***Aluminum*** hubs are strong and heavy duty. ***Composite*** hubs are lightweight, but not as strong as aluminum.

Wheel Size, Dia. × Wd.	Hub Material	Use with Belt Size	Max. rpm	With 1/2"-13 Arbor Hole	Each	With 5/8"-11 Arbor Hole	Each	Replacement Rubber Wheels Only	Each

Replaceable-Cap Aluminum Oxide Sanding Bits

Looking for an easy way to finish recessed and hard-to-reach areas? Just slip one of these seamless sanding caps onto the shank bit's slotted rubber head and you're ready to work. Designed for use on die grinders. Caps are aluminum oxide for general purpose sanding on metals and woods.

All shank bits include a rubber head. Shank bits with 1/8" dia. are 1" long. Shank bits with 1/4" dia. are 1 1/2" long. Sanding caps are sold separately.

To Order: For sanding caps, please specify 60, 150, or 280 grit (unless noted).

★ Available in 80, 150, and 280 grit.

Belt Sanding Sticks

Easily reach small, compact areas with these belt sticks. They're spring-loaded to hold a small sanding belt taut, but also allow you to rotate the belt when it becomes worn.

Belt sticks include one 120 grit aluminum oxide sanding belt with a flexible cloth backing.

Sanding belts are made of aluminum oxide. They are ideal for general purpose sanding on metal and wood. All have a flexible cloth backing, except for the 600 grit, which has a stiff cloth backing. **To Order:** Please specify 80, 120, 180, 240, 320, 400, or 600 grit.

Rubber Drum and Sanding Sleeve Assortments

Our assortments contain the most popular expanding rubber sanding drum sizes and aluminum oxide sanding sleeves. Rubber drums resist cracking and will last longer than plastic drums. Drums are secured with a hex fitting. For individual sleeves, see page 2670.

Four 1/4" Shank Diameter Drums with Eight Sleeves— You'll get the following drums (Dia. × Wd.): 1/2" × 2", 3/4" × 2", 1" × 2", and 1 1/2" × 2" plus one 50-grit and one 120-grit sleeve for each size.

4648A13 ..... **Each** $11.46

Five 1/4" Shank Diameter Drums with 10 Sleeves— You'll get the following drums (Dia. × Wd.): 1/2" × 1/2", 3/4" × 1", 1" × 1", 1 1/2" × 1 1/2", and 2" × 1 1/2" plus one 50-grit and one 120-grit sleeve for each size. *Note:* The 1/2" × 1/2" drum has a 1/8" dia. shank.

4648A12 ..... **Each** $12.82

Five 1/8" Shank Diameter Drums with 10 Sleeves— You'll get the following drums (Dia. × Wd.): 3/8" × 1/2", 1/2" × 1/2", 1/2" × 3/4", 3/4" × 1/2", and 3/4" × 3/4" plus one 50-grit and one 120-grit sleeve for each size.

4648A14 ..... **Each** $6.75

Six 1/4" Shank Diameter Drums with 90 Sleeves— You'll get the following drums (Dia. × Wd.): 1/2" × 1/2", 3/4" × 1", 1" × 1", 1 1/2" × 1 1/2", 2" × 1 1/2", and 3" × 1" plus five 36-grit, five 50-grit, and five 120-grit sleeves for each size. *Note:* The 1/2" × 1/2" drum has a 1/8" dia. shank and the 3" × 1" drum has a hollow shank to fit on a 1/2" motor shaft.

4735A11 ..... **Each** $60.41

Tungsten Carbide Sanding Sleeves for Plastics and Fiberglass

Tungsten carbide grit bonded to a steel sleeve provides superior durability when used on plastics and other nonmetallic materials. These sleeves are a good choice for shaping, hole sizing, and general sanding. Mount them on rubber drums (sold separately on page 2670). For use on die grinders and similar portable tools.

To Order: Please specify 24, 36, or 60 grit.

Inside Dia.	Wd.		Each
1"	1"	4727A41	$30.55
2"	1 1/2"	4727A42	39.89
3"	3"	4727A43	52.02

Long-Life Aluminum Oxide Flap Sanding Sleeves

Experience the best of both worlds with these flap sanding sleeves. Like flap wheels, these sleeves have tightly packed flaps of abrasive material that wear down evenly for long life. Yet, they also aggressively remove material and are replaceable like sanding sleeves. Mount on rubber drums (sold separately below). Use on die and straight grinders.

To Order: Please specify 36, 50, 80, 120, 180, 240, 320, or 400 grit.

Sleeves Dia. × Wd.		Each	Drums Shank Dia.	Max. rpm		Each
1 1/4" × 3/4"	4597A11	$11.38	1/4"	26,000	4597A31	$19.85
1 3/4" × 3/4"	4597A12	11.98	1/4"	19,100	4597A32	21.85
1 3/4" × 1 3/16"	4597A13	13.12	1/4"	19,100	4597A33	23.90
2 1/2" × 1 3/16"	4597A14	18.24	1/4"	12,700	4597A34	26.95
3 1/2" × 1 3/16"	4597A15	25.02	3/8"	7,600	4597A35	32.93

For information about sanding abrasives, see page 2651.

Sanding Sleeves

Also known as spiral bands, these sleeves are perfect for use on flat and irregular surfaces. All have a strong, stiff cloth backing and a cloth inner liner. Mount them on rubber drums (sold below) and on die grinders and similar portable tools (unless noted).

Aluminum oxide is the most popular abrasive for general purpose sanding on a wide range of metals and woods. **To Order:** Please specify 36, 50, 60, 80, 120, 180, 240, or 320 grit.

Zirconia alumina is a premium grain that's designed for all types of metals and woods where an aggressive cutting action and higher material removal rates are needed. Grains are self-sharpening for extended sleeve life. **To Order:** Please specify 36, 50, 80, or 120 grit.

Ceramic aluminum oxide is a long-life premium grain that produces outstanding results in medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels. **To Order:** Please specify 50, 60, 80, or 120 grit.

Silicon carbide is for use with nonferrous metals, glass, rubber, plastics, fibrous woods, enamels, and other soft materials. Ideal for penetrating and cutting fast under light pressure. **To Order:** Please specify 36, 50, 80, 120, or 180 grit.

100-Piece Aluminum Oxide Sleeve Assortment—You'll get 10 of both the 50- and 120-grit sleeves in each of the following sizes (ID×Wd.): ½"×½", ¾"×1", 1"×1", 1½"×1½", and 2"×1½".

Rubber Drums for Sanding Sleeves

Standard *Twist-n-Lock*

Pair these drums with cloth, tungsten carbide, and nylon mesh sanding sleeves (sold separately above) for sanding operations on flat and irregular surfaces. All hold sleeves without adhesives—simply slide a sleeve on the drum and tighten. Drums are designed for use on die grinders and similar portable tools.

Standard drums have a hex fitting on the bottom of the drum (unless noted) that, when tightened with a wrench, causes the drums to expand and securely hold a sleeve. ***Twist-n-lock*** drums do not require any tools to secure sleeves. Just rotate the rubber cylinder by hand while holding the shank to tighten or loosen a sleeve.

Drums with a solid shank fit in the collets and chucks of die grinders and similar tools.

Drums with a hollow shank and set screws are for use with straight unthreaded shafts and arbors of bench and pedestal grinders.

Drums with a female threaded arbor are for use with straight threaded shafts and arbors of bench and pedestal grinders.

★ Has a slotted screw head fitting. ✓ Has a hex fitting on the top of the drum. ♠ Internal thread size.

For information about sanding abrasives, see page 2651.

Spiral-Wound Sanding Rolls

Designed to constantly renew themselves, these rolls feature a tightly wound, one-piece layered construction. As the outer layer wears away, new abrasive is exposed. Also known as cartridge rolls, they have a strong cloth backing. Use on straight die grinders and flexible shaft tools. Rolls fit the mandrels sold separately. Max. rpm is 26,000 rpm for 1/4″-1/2″ diameter sizes; 18,000 rpm for 5/8″-3/4″ diameter sizes; 16,500 rpm for 7/8″ diameter size; and 15,000 rpm for 1″ diameter sizes.

Straight rolls are for use in channels, fillets, recesses, contours, sidewalls, and other hard-to-reach spots.

Tapered rolls are for use on angles, corners, concave contours, funnel-shaped recesses, and other intricate shapes. The diameter listed is for the large end of the roll.

Aluminum oxide rolls are for sanding on metal and wood. ***Zirconia alumina rolls*** are for when aggressive cutting action and higher material removal rates are needed on metal and wood. ***Ceramic aluminum oxide rolls*** are tougher and harder than aluminum oxide rolls because the grains continuously produce sharp new cutting points. Rolls are for medium to heavy material removal on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron, forgings, and some stainless steels.

122-Piece Roll Kit

You'll get 120 of the most popular 80- and 120-grit, straight and tapered aluminum oxide rolls from 1/4″ to 1/2″ diameter sizes in 1″ and 1 1/2″ lengths, plus two mandrels. Kit is furnished in a compartmented plastic case.

4690A91 ..... **Each** $70.12

High-Performance Flap Sanding Wheels

Sharp abrasive grains allow these wheels to withstand the most demanding applications. Ideal for grinding, finishing, and deburring. Backing is stiff cloth, except ***silicon carbide***, which is flexible. Use on die grinders. ***Wheels with a 1/4″-20 male quick-change threaded spindle*** are easy to install and remove. For shank adapters, see 4734A on page 2673. ***Zirconia alumina*** flap wheels have an aggressive cutting action and remove more material than aluminum oxide. Use on all types of metals and woods. ***Ceramic aluminum oxide*** flap wheels cut faster and last longer than aluminum oxide flap wheels and give a consistent finish. Use on carbon steels, cast iron forgings, nickel alloys, aerospace alloys, and some stainless steels. ***Silicon carbide*** flap wheels cut faster than aluminum oxide while under light pressure, but are not as durable. Use on nonferrous metals, glass, rubber, plastics, fibrous woods, enamels, and other soft materials.

With 1/4″ Dia. Shank

With 1/4″-20 Threaded Spindle

To Order: Please specify 60, 80, or 120 grit.

Flap Sanding Wheels, Tools & Pads

For information about sanding abrasives, see page 2651.

Aluminum Oxide Arbor-Mount Flap Sanding Wheels

A steel center holds the flaps of these tools in place, giving them extra strength. Flaps are flexible, allowing them to conform to curves and contours while providing consistent, gouge-free finishes when sanding. As the flaps wear, new abrasive is exposed. They can be used as an alternative to wire wheels.

Flaps are made of aluminum oxide and have a strong cloth backing. Use on straight-shaft power tools, bench grinders, and pedestal grinders. Optional 1/4″ shank adapter listed below gives wheels added versatility.

Optional 1/4″ Shank Adapters

Allow wheels to be used on portable tools that accept a 1/4″ dia. shank. Includes an adapter, hex key, and three fasteners for different wheel widths.

For Wheel Dia.		Each
3 1/2″	4654A33	$10.47
4″–8″	4654A64 ♦	10.17

♦ Not for use with 3″ wide wheels.

Reducer Bushings

For 6″ and 8″ dia. wheels with a 1″ arbor hole.

Arbor Hole		Per Pair
3/8″	4654A51	$1.17
1/2″	4654A52	1.17
5/8″	4654A53	1.17
3/4″	4654A55	1.17
7/8″	4654A54	1.17

Reducer Bushings

For 10″ and 12″ dia. wheels with a 1 3/4″ arbor hole.

Arbor Hole		Per Pair
3/4″	4654A91	$10.08
1″	4654A92	10.08
1 1/4″	4654A93	10.08

Super-Flex Aluminum Oxide Flap Sanding Wheels

The flaps on these wheels are slit into narrow strips for a level of flexibility not found with other flap wheels. Use them on straight die grinders and other portable tools for finishing, polishing, and deburring work on difficult contours and irregular shapes.

Wheels are made of aluminum oxide for use on metal, plastic, and wood. All have a semi-flexible cloth backing and are mounted to a 1/4″ dia. shank.

Wheel Size, Dia.×Wd.	Max. rpm	120 Grit	Each	180 Grit	Each	240 Grit	Each	320 Grit	Each
2″ × 1″	20,000	47065A151	$8.04	47065A152	$8.04	47065A153	$8.04	47065A154	$8.04

Flap Sanding Tools for Internal Sanding

3-Flap Bundles

4-Flap Bundles

8-Flap Bundles

Mandrel

Polish, clean, and debur deep inside tubes and cylinders. Flaps automatically adjust (within the workpiece ID range) to the inside diameter of your workpiece and apply equal pressure to the interior walls for uniform finishes. Made of aluminum oxide with a strong cloth backing for general sanding on metal and wood (unless noted). Use on die grinders and drills.

Cloth sanding flap tools remove material aggressively. ***Combination nylon mesh and cloth sanding flap*** tools are more flexible than standard tools and provide a finer, more polished finish. **To Order:** Please specify 60, 80, 120, 180, or 240 grit.

Mandrels have a 1/4″ shank dia. Required for tools with 3- and 4-flap bundles. ***Extensions*** required for 8-flap bundle tools.

Internal Sanding Tool Kit

Includes 10 inner-diameter polishers and two mini flap wheels in assorted sizes and grits for 1″ to 5″ IDs, plus mandrels.

4695A12 ..... **Each** $94.10

Extensions

Use with all tools except 3-flap bundle tools. To use with 4-flap bundle tools, use the appropriate mandrel. To use with 8-flap bundle tools, thread extensions directly into the hub. No mandrels necessary.

Dia.×Lg.		Each
1/4″ × 2″	8240A39	$1.22
1/4″ × 4″	8240A42	3.20
1/4″ × 6″	8240A43	3.51
1/4″ × 8″	8240A44	5.82

Aluminum Oxide Square and Cross Sanding Pads

Square Pad

Cross Pad

With folded over bands of cloth-backed sanding abrasive, these pads can work on interior surfaces of pipes and tubes as well as on an angle to reach into corners and slots. Pads are made of aluminum oxide. Use on die grinders and drills.

Square pads provide fast cutting and won't leave swirl marks because of the alternating stroke of the pad corners.

Cross pads allow you to see through the pad when in motion to better control stock removal.

To Order: Please specify 60, 80, or 120 grit.

Mandrels required. All have a 1/4″ dia. shank.

Pad Size, Lg.×Wd.×Thick.	Fits Mandrel Size	Max. rpm	Pads	Each	Mandrels	Each

For information about sanding abrasives, see page 2651.

Aluminum Oxide Shank-Mount Flap Sanding Wheels

Reduce gouging and other surface deformations while achieving a uniform finish with these flexible flap wheels. As flaps wear, new abrasive is exposed. Wheels are made of aluminum oxide for sanding on metal and wood. Use on die grinders and similar portable tools. Wheels with a 1/8″ shank dia. have a flexible cloth backing; all others have a stiff cloth backing.

Wheels with quick-change threaded spindle are easy to install and remove without tools. They have a 1/4″-20 male threaded spindle. Shank adapters are required and sold separately below.

Fine-Finish Aluminum Oxide and Nylon Mesh Flap Sanding Wheels

With alternating cloth sanding and nylon mesh abrasive flaps, these wheels are more flexible and produce finer finishes than ordinary all-cloth flap sanding wheels. Use for light deburring, finishing, and polishing on metal and wood.

High-density wheels have a 4:1 ratio of cloth sanding flaps to nylon mesh flaps, providing a more aggressive cutting action and greater material removal than medium-density wheels.

Medium-density wheels have a 1:1 ratio of cloth sanding flaps to nylon mesh flaps for an extra-smooth blending action.

To Order: For cloth sanding flaps, please specify 60, 80, 120, 180, 240, or 320 grit.

Wheel with a 1/4″ Shank

Wheel with Arbor Hole

Flap Wheels

Wheel Size, Dia. × Wd. × Shank/Arbor Hole	Max. rpm	High Density	Medium Density	Each
2″ × 1″ × 1/4″ Shank	12,000	4634A612	4653A712	$9.30
2″ × 1 1/2″ × 1/4″ Shank	12,000	4634A622	4653A721	7.45

1/2″	4654A52	1.17	7/8″	4654A54	1.17
5/8″	4654A53	1.17			

About Nylon Mesh Abrasives

Nylon mesh abrasives are used mainly as surface finishing products. They change the work surface without removing or damaging the base material. You can use them as an alternative to wire brushes, steel wool, sandblasting, buffs and compounds, rubber bonded abrasives, and sandpaper.

Also known as nonwoven abrasives, they are made of abrasive grain and nylon fibers. Flexibility depends on the density of the mesh. Densities range from soft (hand pads and rolls) to hard (wheels and some discs). Use wet and dry. They are long lasting, nonrusting, nonconductive, and clog resistant.

Nylon mesh products are embedded with either aluminum oxide or silicon carbide abrasive grains. ***Aluminum oxide*** is more durable and more aggressive on hardened steel parts. ***Silicon carbide*** cuts faster and produces a finer finish on most materials.

The following chart is a general guide as to which pads are best suited for certain applications. However, depending on the condition of the workpiece, it may be necessary to use several grades in a multistep process to achieve your desired result.

	Aluminum Oxide			***Silicon Carbide***				
	Coarse Grade	**Medium Grade**	**Fine/Very Fine Grade**	**Extra Coarse Grade**	**Coarse Grade**	**Medium Grade**	**Fine/Very Fine Grade**	**Ultra/Micro Fine Grade**

3M Scotchbrite Nylon Mesh Abrasive Hand Pads

Use these premium Scotchbrite hand pads for cleaning, deburring, blending, and finishing applications. Either use by hand or cut them to size to use with portable sanders. Pads are 6″×9″ and approximately ¼″ thick.

Grade	3M No.	Color	Applications	Pkg. Qty.		Per Pkg.♦
Aluminum Oxide						
Heavy Duty (Medium)	7440	Tan	Aggressive action for deburring, blending, and removing rust.	10	46365A36	$29.71
Clean/Scour (Very Fine)	96	Green	For removing light stains, corrosion, and oxidation.	20	46365A31	18.63
All Purpose (Very Fine)	7447	Maroon	More abrasive than Clean/Scour. For light deburring and general cleaning.	20	46365A33	22.54
Silicon Carbide						
Blending (Medium)	7446	Gray	Aggressive action for cleaning, blending, and light deburring.	10	46365A38	19.76
Clean/Finish (Ultra Fine)	6448	Dk. Gray	A good choice for light cleaning and blending jobs.	20	46365A35	24.10
Final Finish (Ultra Fine)	7448	Lt. Gray	For final finishing and light cleaning.	20	46365A32	24.57

♦ Available in less than full-package quantities. Prices are approximately 15% higher.

Nylon Mesh Abrasive Hand Pads

Sand, scrub, debur, and finish with these hand pads. Similar to the other pads shown on this page, these hand pads can also be cut to size to use with portable sanders. Pads are 6″×9″ and approximately ¼″ to ½″ thick.

Hand-pad holder grips hand pads firmly. Pads must be cut to 3″×6″ to fit holder.

21-piece hand-pad kit includes five Heavy Duty aluminum oxide pads, five Clean/Scour aluminum oxide pads, five All Purpose aluminum oxide pads, five Clean/Finish silicon carbide pads, and one hand-pad holder.

Grade	Color	Applications	Pkg. Qty.		Per Pkg.♦
Aluminum Oxide					
Heavy Duty (Medium)	Brown	Aggressive action for deburring, blending, and removing rust.	20	46365A86	$39.72
Clean/Scour (Very Fine)	Green	For removing light stains, corrosion, and oxidation.	20	46365A71	14.94
All Purpose (Very Fine)	Maroon	More abrasive than Clean/Scour grade. For light deburring and general cleaning.	20	46365A73	14.79
Long Life (Very Fine)	Maroon	Less flexible than All-Purpose grade. For cleaning and deburring.	20	46365A79	13.56
Silicon Carbide					
Blending (Medium)	Gray	For aggressive cleaning, blending, and light deburring.	20	46365A78	24.83
All Purpose (Very Fine)	Gray	For removing rust and oxidation and blending around welds.	20	46365A87	22.62
Clean/Finish (Ultra Fine)	Gray	A good choice for blending and general cleaning jobs.	20	46365A85	16.03
Final Finish (Micro Fine)	Gray	For final finishing and light cleaning.	20	46365A72	14.94

21-Piece Hand-Pad Kit				46635A75 Each	$32.02

♦ Available in less than full-package quantities. Prices are approximately 15% higher.

Nylon Mesh Abrasive Rolls

You can tear these nylon mesh rolls and use them by hand or cut them to size for use on portable sanders.

Roll assortment comes with three of the most popular rolls in a dispenser pack. Includes one Long-Life (Fine) aluminum oxide roll, one All-Purpose (Very Fine) aluminum oxide roll, and one Final Finish (Micro Fine) silicon carbide roll. All rolls are 2″ Wd.×15 ft. long.

Grade	Color	***2″×30-ft. Rolls***	Per Roll	***4″×30-ft. Rolls***	Per Roll	***6″×30-ft. Rolls***	Per Roll

★ Grade is Long Life (Very Fine). ■ Color is brown.

For information about nylon mesh abrasives, see page 2674.

Nylon Mesh Abrasive Heavy Stripping and Cleaning Discs

Made with extra coarse nylon mesh, these black heavy duty discs handle the toughest cleaning jobs. All discs are impregnated with silicon carbide.

Standard discs aggressively remove surface coatings and clean welds. Use on metal, rubber, plastic, hard plastic, and wood.

Discs for stainless steel eliminate discoloration from heat buildup. Can also be used on titanium and Inconel.

(A) Right-Angle Discs— Have nylon mesh bonded to a rigid fiberglass backing. Use with right-angle grinders on flat and curved surfaces.

(B) Quick-Change Discs— A 3M Roloc-style plastic fastener on the disc allows quick changes from one disc to another. Discs attach to a 1/4″ dia. shank disc holder (required; sold separately). Use with right-angle die grinders on flat or curved surfaces.

(C) Shank-Mount Discs— Come mounted on 1/4″ dia. shank. Use on drills.

4″ × 1/2″	8,000	4718A23	7.16
4″ × 1″	8,000	4718A24	17.72

Nylon Mesh Abrasive Raised-Hub Discs

A raised hub gives these discs the necessary room to work on right-angle grinders. Made of multiple layers of compressed nylon mesh bonded together and cut to shape. Discs are 1/2″ thick.

Aluminum Oxide— More durable than silicon carbide, causes less discoloration on aluminum, and acts more aggressively on hardened steel. Ideal for removing heavy material such as rust and surface imperfections, and for deburring. Use on metal.

Silicon Carbide— Cuts faster than aluminum oxide and gives a finer finish on most surfaces. Use on nonferrous metals, glass, rubber, plastics, soft woods, enamel, and other soft materials.

Soft and *medium density* discs conform to surfaces better than hard density. Use for blending tool marks and giving a bright surface finish. *Hard density* discs are more durable for aggressive material removal.

Disc Dia.	Arbor Hole	Grade	Density	Max. rpm		Each
Aluminum Oxide (Light Gray)						
4 1/2″	7/8″	Coarse	Hard	10,000	4721A15	$25.29
4 1/2″	7/8″	Medium	Hard	10,000	4721A14	25.29

4 1/2″	7/8″	Medium	Hard	10,000	4721A13	25.29
4 1/2″	7/8″	Fine	Medium	10,000	4721A12	21.21
4 1/2″	7/8″	Fine	Soft	10,000	4721A11	19.41

Nylon Mesh Abrasive Raised-Hub Flap Discs

A nylon mesh version of our popular flap sanding discs, these discs have overlapping flaps of nylon mesh abrasive material that are impregnated with aluminum oxide and mounted in layers on a fiberglass hub. This creates a cushioned effect that makes these discs ideal for blending and other finishing tasks. Raised-hub design allows you to use these discs on right-angle grinders.

Disc Dia.	Arbor Hole	Grade	Color	Max. rpm		Each
4 1/2″	7/8″	Coarse	Brown	13,300	4661A23	$15.57
4 1/2″	7/8″	Medium	Maroon	13,300	4661A22	15.57
4 1/2″	7/8″	Very Fine	Blue	13,300	4661A21	15.57

Nylon Mesh Abrasive Quick-Change Discs

Make quick and simple changes from one disc to another. All discs are impregnated with aluminum oxide. For use on wood and metal with right-angle die grinders. Discs and the required disc holders are sold separately.

Choose from the following grades: ***Coarse—*** For light deburring and removal of heavy rust and surface imperfections. ***Medium—*** For cleaning, blending, and rust removal. ***Very Fine*** and ***Fine—*** For light scratch removal, finishing, and polishing.

Surface-Conditioning Discs for Flat Surfaces— The best choice for most surface preparation work. The extra stiffness makes these discs more aggressive than finishing and polishing discs. Great for cleaning and light deburring.

Finishing and Polishing Discs for Contoured and Flat Surfaces— Thicker, more pliable, and less aggressive than surface-conditioning discs, these discs are best suited for light duty work.

To Order: Please specify the type of disc fastener: Style A (Metal) or Style B (Plastic). *Style A* is a metal fastener equivalent to Standard Abrasive SocAtt, Norton Speed-Lok TS, and 3M TSM styles. *Style B* is a plastic fastener equivalent to 3M Roloc and Norton Speed-Lok TR styles.

26-Piece Aluminum Oxide Surface-Conditioning Disc Kits

Each kit comes with 24 discs (four each of coarse, medium, and very fine grades in 2″ and 3″ dia. sizes) plus one each of 2″ and 3″ dia. disc holders with 1/4″ dia. shank.

Fastener Style		Per Kit
Style A (Metal)	4799A91	$43.44
Style B (Plastic)	4799A92	44.25

Nylon Mesh Abrasive Discs, Wheels & Belts

For information about nylon mesh abrasives, see page 2674.

Aggressive Nylon Mesh Abrasive Quick-Change Discs

Embedded with sharp, fast-sanding ceramic aluminum oxide, these discs debur, clean, and blend faster than other discs. Grain particles continuously produce new sharp cutting edges. For use on carbon steels, aerospace alloys, nickel alloys, aluminum, cast iron forgings, and some stainless steels. Have a plastic fastener equivalent to 3M Roloc and Norton Speed-Lok TR styles. Use on right-angle die grinders. Color is blue.

Disc holders are required and sold separately. All have a medium density rubber backing and 1/4″ dia. shank.

Choose from the following grades: ***Coarse—*** For deburring and removing heavy rust and surface imperfections. ***Medium—*** For moderate to light cleaning, blending, and surface material removal.

Disc Dia.	Coarse Discs	Medium Discs	Each	Disc Holders Max. rpm		Each
2″	4682A12	4682A11	$1.41	30,000	46325A92	$10.85
3″	4682A14	4682A13	2.88	20,000	46325A93	11.92

See-Thru Nylon Mesh Abrasive Discs

The holes in these discs allow you to see the surface as you're sanding it, so you can work faster and more accurately. Discs are made of aluminum oxide and are for use on metal and wood. Use on right-angle grinders that have a 5/8″-11 spindle.

Backup pads (required; sold separately) include a 5/8″-11 locknut.

Choose from the following grades: ***Coarse—*** Excellent for deburring and removing heavy rust and surface imperfections. Color is brown. ***Medium—*** For moderate to light cleaning and removing rust. Color is maroon. ***Very Fine—*** For finishing, polishing, and preparing surfaces for painting. Color is blue.

To Order: Please specify coarse, medium, or very fine grade.

Discs Disc Dia.		Each 1-9	10-Up	Backup Pads Max. rpm		Each
4 1/2″	46795A64	$2.76	$2.48	13,000	46795A24	$10.52

7″	46795A66	4.90	4.41	8,600	46795A26	24.41

Nylon Mesh Abrasive Hook and Loop Discs

Disc

Backup Pad with Disc

The hook-and-loop style fasteners on these discs serve as an alternative to traditional disc fasteners by securely grabbing the backup pad (required; sold separately). Discs are flexible and work best on flat, curved, and contoured surfaces. They are embedded with aluminum oxide. Use on metal and wood with right-angle grinders, right-angle die grinders, and dual-action sanders.

Choose from the following grades: ***Coarse—*** For deburring and removing heavy rust and surface imperfections. Color is brown. ***Medium—*** For moderate to light cleaning, blending, and removing surface material. Color is maroon. ***Very Fine—*** For removing fine scratch marks and lines, final finishing, polishing, and preparing surfaces for painting. Color is blue.

To Order: Please specify coarse, medium, or very fine grade.

Nylon Mesh Abrasive Shank-Mount Flap Wheels

The flexibility of these wheels makes them ideal for uneven and irregular surfaces. Wheels are impregnated with aluminum oxide, and are less aggressive than standard flap sanding wheels. Use on metal and wood. They're mounted on a 1/4″ diameter shank for use on straight die grinders. Color is maroon.

Choose from the following grades: ***Medium—*** For cleaning, removing oxides, and deglossing plastic. ***Very Fine—*** Gives uniform finishes.

Wheel Size, Dia. × Thick.	Max. rpm	Medium	Very Fine	Each
2″ × 1″	12,000	46735A42	46735A41	$9.22

For information about nylon mesh abrasives, see page 2674.

Nylon Mesh Abrasive Shank-Mount Bits

A B C D

Mounted on a shank, these bits are ready to debur, clean, blend, and polish when used on die and straight-shaft grinders. Bits are 1½″ long.

Choose from the following grades: ***Coarse***—Aggressive for tough deburring and cleaning. Bits are hard density. Abrasive is aluminum oxide. Color is dark gray. ***Medium***—For deburring and polishing. Bits are hard density. Abrasive is aluminum oxide. Color is blue. ***Fine***—For blending tool marks, scratches, and producing a high luster finish. Bits are medium density. Abrasive is silicon carbide. Color is black.

To Order: Please specify coarse, medium, or fine grade.

	Shape No.	Head Dia.	Head Lg.	Max. rpm		Each
With 1/8″ Shank Bit						
A	B90	1/2″	1/2″	34,500	**4630A14**	$3.52
B	B121	1/2″	1/2″	45,300	**4630A15**	3.88

Nylon Mesh Abrasive Sleeves

Mount these sleeves on rubber drums (see page 2670) to debur, blend, and polish both flat and curved surfaces. Sleeves are made of aluminum oxide, and are for use on metal and wood. Use wet and dry.

Choose from the following grades: ***Coarse***—For deburring and removing heavy rust and surface imperfections. ***Medium***—For light cleaning, blending, and removing rust. ***Very Fine***—For finishing and polishing.

Size, ID×Wd.	Coarse (Brown)	Each	Medium (Maroon)	Each	Very Fine (Green)	Each

Nylon Mesh Abrasive Shank-Mount Tools for Internal and Irregular Surfaces

E F G H

With their flexibility and unique shapes, these tools conform to the inside of hard-to-reach spots. Made of aluminum oxide. Use with straight-shaft grinders and drills to clean and finish metal and wood. Mandrels (required; sold separately) are 3″ long with a 1/4″ dia. shank.

Style E—For inside tubing, cylinders, molds, and other cavities. Use with an 8-32 mandrel. Max. rpm is 20,000. *Medium* is blue. *Very fine* is red.

Style F—Best for working on channels, fillets, corners, and recesses. Use with a 1/4″-20 mandrel. Max. rpm is 8,000. Color is maroon.

Style G—Have three strips of nylon mesh to work on large inside diameters. Use with a 1/4″-20 mandrel. Max. rpm is 3,000. Color is maroon.

Style H—Fits inside pipe and tubing and other recessed areas. Use with a 1/4″-20 mandrel. Max. rpm is 22,000 (unless noted). *Coarse* is brown. *Medium* is maroon. *Very fine* is blue.

Choose from the following grades: ***Coarse***—For deburring and removing heavy material. ***Medium***—For light cleaning and blending. ***Very Fine***—For finishing.

	Tool Size× Thick.		Ply	Coarse	Each	Medium	Each	Very Fine	Each

♠ Max. rpm is 20,000. ♦ Max. rpm is 12,000.

Nylon Mesh Abrasive Shank-Mount Wheels for Curved Surfaces

Easily reach within concave surfaces and follow contours with these dome-shaped wheels. Made with aluminum oxide-impregnated discs stacked and mounted on a 1/4″ dia. shank. Use on metal and wood. For use with die grinders, portable drills, and drill presses. Color is maroon.

Choose ***medium*** grade for moderate to light cleaning and deburring or ***fine*** grade for light blending and finishing.

Repl. discs available in medium (pkg. qty. 8) and fine (pkg. qty. 10) grade.

To Order: For wheels and repl. discs, please specify medium or fine grade.

Wheel Size, Dia.×Thick.	Max. rpm	Wheels	Each	Replacement Discs	Per Pkg.
2″×2″	12,000	**46835A35**	$27.56	**46835A36**	$11.85
3″×2″	8,500	**46835A37**	31.07	**46835A38**	14.67

Nylon Mesh Abrasive Shank-Mount Disc Wheels

Multiple discs compressed on an epoxy core allow these wheels to conform to a variety of tight spots and internal surfaces. Discs are aluminum oxide for use on metal and wood. Use with drill presses, straight-shaft grinders, and finishing tools. Color is maroon.

Choose from the following grades: ***Medium***—For moderate deburring and cleaning. ***Fine***—For light cleaning, blending, and finishing. ***Very Fine***—For polishing and final finishing to a satin or luster finish.

Nylon Mesh Abrasive Shaft-Mount Finishing Discs

Use one for intricate jobs, or several on a 1/4″ dia. shank mandrel (sold separately) or shaft for larger jobs. Made of aluminum oxide, discs are flexible to conform to the workpiece. Use with bench, pedestal, and straight-shaft grinders on metal and wood.

Choose from the following grades: ***Medium***—For moderate blending, cleaning, light deburring, and general finishing. Thickness is 1/2″. ***Fine***—For light cleaning and finishing. Thickness is 3/8″. ***Very Fine***—For polishing and final finishing. Thickness is 1/4″.

Nylon Mesh Abrasive Wheels

For information about nylon mesh abrasives, see page 2674.

Rigid Nylon Mesh Abrasive Wheels for Bench and Pedestal Grinders

With tightly wrapped nylon mesh around a core, these large diameter wheels hold their shape while in use on bench and pedestal grinders. Also known as convolute wheels. ***Cleaning, Finishing, and Polishing Wheels—*** For cleaning, blending welds on stainless steel, and removing rust and oxidation. ***Deburring and Blending Wheels—*** For light deburring, blending scratches, and removing rust.

Soft Density— For general cleaning, blending welds, and removing rust and oxidation. Not recommended for deburring. ***Medium Density—*** Ideal for light deburring, blending scratches, and removing rust. ***Hard Density—*** Cuts more aggressively than medium density. ***Extra-Hard Density—*** Use to remove burs and surface contaminants, radius edges, and polish welds.

Silicon Carbide for Exotic Metals— Will not gouge most high alloy metals. Use to debur and finish titanium, Inconel, and other heat-sensitive metals.

Bushing Set— For use with 4″ and 6″ diameter wheels that have a 1″ arbor. Set includes ½″, ⅝″, and ¾″ reducer bushings nested together.

47335A29 ..... **Per Set** $1.18

Rigid Nylon Mesh Abrasive Wheels for Portable Tools

Also known as unified wheels, these small diameter wheels are formed from multiple layers of compressed nylon mesh, which allows them to hold their shape and last longer. Use on die and straight-shaft grinders for deburring, blending, and finishing.

Coarse Grade, Hard Density— For deburring, rounding sharp edges, and removing rust and oxidation. Has good tear resistance.

Medium Grade, Soft Density— Conforms best to intricate shapes. Use for general cleaning, removing light rust, and polishing.

Medium and Fine Grades, Extra-Hard Density— The fastest cutting, smoothest finishing, and longest lasting. For high speed deburring and cleaning hard metals. Use fine grade to achieve a finer finish than medium grade.

Fine Grade, Medium Density— Similar to soft-density wheels, but these cut faster and give a finer finish.

3″	¼″	1″	2½″	**46605A36**	6.66

Steel Wool

Offered in grades from extra coarse to super fine, steel wool is handy for many surface preparation tasks from removing paint and rust to polishing for a fine finish. Pads are approximately 4″×2¾″×¾″. The reels are approximately 4″ Wd.×¼″ Thick.

Grade 4— Aggressively remove rust and dirt. ***Grade 3—*** Strip lacquer and paint. ***Grade 2—*** Remove rust, wax buildup on floors, and paint on moulding; clean glass, brick, rough metal, and stone surfaces. ***Grade 1—*** Clean cast and wrought iron, copper pipes and fittings, and prepare wood for first coat of paint. ***Grade 0—*** Clean bare metals, porcelain, and tile as well as remove rust from metal. ***Grade 00—*** Remove old finishes, restore aluminum, and prepare surfaces before painting. ***Grade 000—*** Polish metal, buff cabinets, and remove paint from wood and rust from chrome. ***Grade 0000—*** Buff woodwork, lacquer, varnish, and clean precision instruments and tools.

Rustless Metal Wool

Unlike steel wool, these metal wools won't leave small fibers that cause rust. Pads are approximately 4″×2¾″×¾″; reels are approximately 4″ Wd.×⅛″-¼″ Thick.

Bronze— Good for use on hardwood and brass. Approximate length for a 5-lb. reel is 125 ft.

Type 434 Stainless Steel— Good for general purpose use on stainless steel. Approximate length for a 5-lb. reel is 125 ft.

Type 316 Stainless Steel— Provides even better corrosion resistance than Type 434. Approximate length for a 1-lb. reel is 20-25 ft. and 100-120 ft. for a 5-lb. reel.

Aluminum— Lighter, softer, and leaves a finer finish than other rustless metal wools. Good for cleaning and finishing aluminum. Approximate length for a 1-lb. reel is 40-45 ft. and 200-225 ft. for a 5-lb. reel.

Coarse grade is comparable to steel wool grades 3-4. *Medium* grade is comparable to steel wool grades 1-2. *Fine* grade is comparable to steel wool grades 0-00.

Rustless Metal Gauze

Made of knit strands of rust-resistant metal, these rolls of mesh gauze won't snag or leave strands on your work surface. Rolls are 5″ Wd.×100′ Lg. and can be cut easily to desired length.

Copper gauze is nonsparking and cleans production equipment, molds, punches, dies, and plastics processing equipment without harming the finish. ***Type 304 stainless steel gauze*** is suitable for food processing and tough cleaning jobs.

		Each
Copper Gauze	6361T12	$95.93
Type 304 Stainless Steel Gauze	6361T14	70.92

Synthetic Wool Pads

Replace your steel wool with these nylon mesh pads that won't rust, splinter, or shed. Use wet or dry. Pads are 4⅜″×5½″.

Smooth-Finish Abrasive Blocks

Rubber Bonded

Cotton Laminate

Rubber or cotton bonds cushion the abrasive in these blocks so they polish smoothly without gouging your work surface. They're excellent for cleaning and polishing metal and removing rust, stains, and heat marks.

Rubber-bonded blocks are more flexible and long lasting. *Aluminum oxide* is for use on ferrous metals and tough materials such as carbon and high-speed steel. Color is brown. *Silicon carbide* is for use on iron, carbide, and hard alloys. Shape is rectangular. Color varies.

Cotton laminate blocks leave a finer finish. Abrasive is aluminum oxide. Color is light gray.

Coarse-Finish Abrasive Blocks

Rub down concrete and remove mold marks with these extra coarse (24) grit silicon carbide blocks. Color is dark gray.

Size		Each
6″×3″ ×1″	4509A2	$16.79
8″×3½″×1½″	4509A1	21.58

Medium-Finish Abrasive Block

This abrasive block wears evenly to maintain its flat surface. Blocks are made of medium (180) grit silicon carbide abrasive. They quickly eliminate burs, and are great for cleaning magnetic chucks. Size is 6¼″×4⅛″×1⅝″. Color is light gray.

42685A55 ..... **Each** $56.29

About Abrasive Files and Sharpening Stones

Abrasives

Aluminum oxide (also called India) creates durable, smooth cutting edges and is preferred for close tolerances. ***Alumina ceramic*** is extremely hard and wear resistant. It sharpens hardened and tempered metals to a fine edge. ***Silicon carbide*** (also called Crystolon) sharpens quickly but doesn't produce as fine a cutting edge. ***Soft Arkansas*** (extra-fine grit) yields an even, polished surface and is often used after sharpening with aluminum oxide and silicon carbide stones. ***Hard Arkansas*** (ultra-fine grit) produces precise finishes with polished, razor-like edges.

Lubrication

Most stones are porous and need lubrication to work effectively. Those that aren't oil filled must be oiled before use, except alumina ceramic stones which require no lubrication. ***Oil-filled*** stones do not need extra lubrication.

For sharpening-stone oil, see page 2178.

Grit Size

Coarse grit cuts quickly. Great for restoring badly worn edges. ***Medium grit*** produces a smooth edge. ***Fine grit*** yields a slightly sharper edge than medium grit. Perfect for cutting tools. ***Extra-fine grit*** is commonly used following the fine grit to achieve an even sharper edge. ***Ultra-fine grit*** produces the sharpest edge possible.

Grit Sizes

	Aluminum Oxide	Alumina Ceramic	Silicon Carbide	Arkansas
Coarse	100	N/A	100	N/A
Medium	240	400 to 600	150	N/A
Fine	320	1800	280	N/A
Extra Fine	N/A	N/A	N/A	400 to 600
Ultra Fine	N/A	N/A	N/A	800 to 1200

Abrasive Files

These files hold their shape while providing a fine, uniform finish on precision machine parts and cutting tools, and in tool- and die-making. Use for sharpening, deburring, cleaning, chamfering, radiusing, honing, and lapping. Choose the file shape that best matches the contour of the work surface.

4″	4433A41	$43.53
6″	4433A42	71.76

Arkansas Rectangular File Kit — Includes a 4″ × 1 5/8″ × 1/2″ extra-fine (600-800) grit pink file, a 3″ × 1″ × 1/4″ ultra-fine (800-1000) grit white file, 3 oz. of honing oil, and a 23° angle guide.

4804A12 ..... **Each** $21.57

For information about sharpening stones, see page 2680.

Thin Abrasive Polishing Files

With these thin files, you'll get extra smooth finishes in even the tightest spaces. Perfect for tough steels and die and mold work.

All are made of aluminum oxide and are treated to wear evenly and make fast cuts. Files can be used by hand or in reciprocating profiling tools. We recommend using them with a water- or mineral-based lubricant.

In general, 100 and 150 grits are considered coarse, 180 and 220 grits are medium, 320 and 400 grits are fine, and 600 grit is extra fine.

To Order: Where applicable, please specify grit size.

General Purpose Files—These files work on all types of steel. Color is gray.

Scale Removal Files—Designed to remove surface scale left by the EDM (electrical discharge machining) process on all types of steel. Color is brown.

Mold Steel and Stainless Steel Files—Specially treated for use on high-grade mold steels such as P-20, H-13, and Type 420 stainless steel. Color is blue.

Aluminum and Soft Metal Files—Ideal for polishing aluminum and other soft metals. Color is tan.

Water-Based Lubricant

This nonhazardous solution cleans, lubricates, and prevents file loading. Comes in a one-gallon container.

44555A77 ..... Each $17.20

File Holders

Hand-Held Holder—For files too short to hold by hand; fits 1/4″×1/8″, 1/2″×1/8″, and 1/4″×1/4″ files.

Hand-Held Holder

47465A82 ..... Each $6.46

Mounted-File Holder—Holds 1/4″×1/8″ files in a file tool. Has a 1/8″ shank.

Mounted-File Holder

4394A21 ..... Each $6.67

Semiflexible Ceramic Abrasive Polishing Files

File

Hand-Held Holder

These ceramic files are thinner and stronger than traditional abrasive files or mold and diemakers' files, allowing you access to tight spots. Perfect for ribs and slots. Use by hand or in reciprocating file tools.

Extra-coarse (180) grit is light brown. ***Coarse (220) grit*** is orange. ***Medium (320) grit*** is brown-black. ***Fine (400) grit*** is blue. ***Extra-fine (800) grit*** is white. ***Ultra-fine (1000) grit*** is red. **To Order:** For files, please specify grit.

Pocket-Size Abrasive Contact Files

Holder with Six Files

Remove corrosion on relay and switch contacts. These tools extend the life of sensitive connections, particularly those made of precious metals. Files and rods are made of diamond particles uniformly embedded in a nonchipping, nonconductive material; color is silver. Holders are plastic.

4575A73 includes six files plus six ball-end rods for cleaning pits on contacts; rods are 1 1/4″ Lg×0.020″ Dia.

Sharpening Stones

For information about sharpening stones, see page 2680.

Single-Grit Sharpening Stones

Aluminum Oxide, Silicon Carbide, and Alumina Ceramic

Arkansas

The most basic and economical tools for quickly resharpening straight-edged tools such as chisels, plane blades, and draw knives.

Aluminum Oxide and Silicon Carbide Oil-Filled Stones

Aluminum Oxide—Coarse (100) grit is dark gray, medium (240) grit is brown, and fine (320) grit is orange.

Silicon Carbide—Coarse (100), medium (150), and fine (280) grits are dark gray.

To Order: Specify grit: coarse, medium, or fine (unless noted).

Size	Aluminum Oxide	Each	Silicon Carbide	Each
4″×1″× 1/4″	4501A11	$7.40	4399A31	$7.76

Contoured-Edge Sharpening Stones

Round Edge

Also known as slip stones, these abrasives combine a broad face with contoured edges for sharpening irregularly shaped tools such as chisels and moulding plane blades.

Aluminum Oxide Oil-Filled Stones

Preferred for use on tool steels. *Round-edge* stones sharpen curved blades and tools. *Knife-edge* stones sharpen the points of cutting tools.

Coarse (100) grit is dark gray. ***Medium*** (240) grit is brown. ***Fine*** (320) grit is orange.

Size	Coarse	Medium	Fine	Each
Round Edge

Three-Grit Sharpening Stones

Standard

Deluxe Oil Bath

These coarse, medium, and fine abrasive stones work together.

Standard sharpener has three stones mounted on a triangular wood block: one 180-grit silicon carbide stone (gray), one Arkansas 220-grit stone (pink), and one Arkansas 320-grit stone (white). Includes a wood base for the stone holder and a 1 oz. bottle of honing oil.

Deluxe oil-bath sharpeners include a nonskid base with a built-in reservoir for honing oil. Just rotate the stones into the bath to keep them clean and oiled. Includes one 100-grit silicon carbide stone (dark gray), one 150-grit silicon carbide stone (dark gray), and one 320-grit aluminum oxide stone (orange). 4505A6 is furnished with 4 oz. of honing oil, 4505A1 with 1 pt. of honing oil.

Stone Size	Sharpeners	Each	REPLACEMENT STONES Coarse	Medium	Fine	Each

Sharpening Stone for Machine-Mount Blades

A groove around this fast-cutting silicon carbide stone protects your fingers for safe sharpening of machine-mounted knives. Also ideal for cleaning and reflattening machinery tables. One side is coarse (120 grit, dark gray); the other is fine (280 grit, gray). Size is 4″ Dia.×1 1/2″ Thick.

4474A4 ..... **Each** $22.54

No-Dust Smooth-Finish Abrasive Blocks

With these semiflexible blocks, you can clean, finish, and polish any metal without producing dust. Made of fine (100) grit aluminum oxide. Nonconductive and nonloading. Color is red-brown.

Size		Each	Size		Each

Diamond Sharpening Stones

Long-lasting diamond stones sharpen cutting tools such as knives, machinists' and cabinetmakers' tools, and garden tools. They can also be used for edging glass, ceramics, and stone.

Stones consist of synthetic diamonds embedded in nickel, electroplated to a perforated steel plate, then molded to a plastic base. Small indentations collect filings and keep the surface clean for fast sharpening. Stones stay flat and sharpen with little effort. Use dry or with water; no messy oil lubricants are needed. To clean, just rinse with water.

These stones are offered in four grits and are color coded for easy identification. ***Extra-coarse, 220 grit*** is for heavy cutting tools such as axes, chisels, and mower blades. Color is black. ***Coarse, 325 grit*** is for everyday tools like scissors and knives. Color is blue. ***Fine, 600 grit*** produces a razor-sharp edge on cutlery and woodworking tools that are regularly sharpened. Color is red. ***Extra-fine, 1200 grit*** is used after fine grit to get the sharpest edge possible. Color is green.

To Order: For stones, please specify grit: extra coarse, coarse, fine, or extra fine.

(A&B) Bench Stones— Come in a wooden case. ***Style A*** is single-sided. ***Style B*** are double-sided, with a different grit on each side. **To Order:** For double-sided, please specify extra-coarse/coarse, coarse/fine, coarse/extra-fine, or fine/extra-fine grit combination.

(C) Pocket Stone— Furnished with a leather sheath. Not offered in extra-fine grit.

(D) Machinists' Stone— Identical to the pocket stone above, but instead of having a perforated pattern across the entire face, one end has a 1″ continuous diamond surface for sharpening pointed carbide and tool steel bits. Not offered in extra-coarse or extra-fine grit.

(E) Mini Folding Stone— Folds into a 3½″×1 1/16″ plastic case with key chain.

(F&G) Folding-Handle Stones— The folding handle serves as a storage case. ***Style F*** is single-sided. ***Style G*** is double-sided, with a different grit on each side. **To Order:** For double-sided, please specify extra-coarse/coarse, coarse/fine, or fine/extra-fine grit combination.

Four-Piece Stone Set

Contains two ***pocket stones (C)***, in extra-coarse and coarse grits, and two ***machinists' stones (D)***, in fine and extra-fine grits. All are 4 11/32″×7/8″ and come in a fabric roll pouch.

4598A48 ... **Per Set** $72.75

Butcher Steels

Quickly sharpen all types of straight-edge (nonserrated) knives. All have a hand guard to protect you from sharp blade edges.

Carbon steels are made of stain-free, hardened high-carbon steel. Handle is polypropylene.

Diamond-coated steel is made of fine (600) grit diamond bonded to a stainless steel rod. Has a plastic handle and comes with a leather sheath.

Handy Knife and Shears Sharpener

Easy on your fingers and your wallet, this hand-held sharpener is perfect for a quick touch-up on dull knife and shear blades. Blades are made of tungsten carbide, and are reversible for extended use.

Sharpener	3663A41	**Each**	$8.29
Repl. Carbide Blades (Set of Two)	3663A42	**Per Set**	$3.71

Pocket-Size Diamond Sharpening Tools

Conventional stones and ceramic sticks can't debur, sharpen, or hone as quickly as these economical diamond tools. They're perfect for tools such as serrated and straight-edge knives, axes, router bits, saw blades, and carbide bits.

(H) Retractable Sharpener— The ¼″ Dia.×3¾″ Lg. rod stores in the brass handle. Includes a leather pouch with belt loop.

(J) Folding-Handle Sharpeners— Excellent for use on serrated and curved blades. Diamond rod is 4″ long and tapers from ¼″ to 1/16″ diameter. Handle folds to enclose the rod. Overall length is 9½″.

(K) Wallet-Size Sharpeners— Diamond crystals are bonded with a stainless steel alloy. Size is 2″×3¼″×1/16″.

(L) Colored-Handle Sharpeners— Color-coded plastic handles help you identify grit size. Diamond particles are embedded in a stainless steel alloy and bonded to a metal base for long tool life. Diamond area is ¾″×2″. Overall length is 6″.

(M&N) Sharpeners for Carbide Tools— Extend the life of carbide cutting tools as well as other tools with these sharpeners. Their diamonds are embedded in a resin-bonded matrix in 1″×3/8″×1/16″ areas. The aluminum alloy handle is 5″×3/8″×3/8″. ***Style M*** has one diamond area. ***Style N*** has two diamond areas, one on each end.

Pocket-Size Boron Carbide Sharpener

Sharpen carbide and high-speed steel cutting tools with this boron carbide abrasive stone. It has a thick working surface for twice the life of diamond hones and five to ten times the life of silicon carbide stones. Overall length is 7″ with a 1 5/8″×½″×3/16″ boron carbide section. Handle has a built-in 2X magnifier. Color is dark gray.

To Order: Please specify coarse (240), medium (320), or fine (400) grit.

8737A7 ... **Each** $35.18

Precision Knife Sharpeners

Four-Stone Diamond Kit

These kits come with knife clamp/angle guides for more accurate and effective knife sharpening than free-hand sharpeners or butcher steels can provide. Kits also come with guide rods, honing oil, and a carrying case. Each stone is mounted on a holder.

All kits include coarse-, medium-, and fine-grit stones. ***Five-stone aluminum oxide kit*** also includes an extra-coarse-grit stone and a V-shaped, fine-grit stone for serrated blades. ***Four-stone diamond kit*** has stones that last longer than aluminum oxide. Also comes with a V-shaped, aluminum oxide fine-grit stone for serrated blades.

Optional universal mount holds knife clamp/angle guide. It has drilled holes in the base for mounting.

Optional V-shaped fine-grit stone sharpens knives with serrated blades. Made of aluminum oxide.

		Each
Three-Stone Aluminum Oxide Kit	4555A16	$36.91
Five-Stone Aluminum Oxide Kit	4555A14	51.52
Four-Stone Diamond Kit	4555A17	92.04
Optional Universal Mount	4555A18	$8.32
Optional V-Shaped Fine-Grit Stone	4555A19	11.43

Heavy Duty Shear Sharpener

With this sharpener, your carbon and stainless steel shears will be two to four times sharper than they were the day you bought them. It works on straight and curved blades up to 14″ long, as well as on pinking shears.

Includes a scissors clamp that adjusts for blade taper, wheel shields and finger guards for safety, and an angle guide that lets you set the sharpening angle from 0° to 55°. It has a ¼-hp, 3,450-rpm motor and operates on 110 VAC, 60 Hz. Furnished with a 5″×½″×½″, 100-grit sharpening wheel and a 5″×½″×½″ buffing wheel. Also includes safety glasses, breathing mask, lubricant, wheel dresser, and 8-ft. power cord with three-prong plug.

		Each
Sharpener	**4515A21**	$419.48
Replacement Sharpening Wheel	**4515A22**	19.52
Replacement Buffing Wheel	**4515A23**	53.05

Landscaping Equipment Sharpeners

Chain Saw Sharpener

Tool and Blade Sharpener

Armed with these kits and a Dremel-style tool, you'll be able to sharpen chain saws, hoes, lawnmower blades, and more.

Chain Saw Sharpening Kit— Includes a sharpening attachment, three diamond-coated stones with a ⅛″ shank, and two spacers.

Tool and Blade Sharpening Kit— With three guides for different angles (22°, 33°, and 45°), this kit sharpens blades of different thicknesses from knives to lawnmower blades. Also includes an aluminum oxide grinding bit with a ⅛″ shank.

		Each
Chain Saw Sharpening Kit	**4471A11**	$9.62
Tool and Blade Sharpening Kit	**4471A12**	9.20

Quick and Easy Drill Bit Sharpener

This economical machine makes sharpening drill bits as easy as sharpening a pencil. Sharpen your bit in three quick steps—determine the type and angle of the drill bit being sharpened, align the bit in the chuck, and sharpen. Sharpener will also split the point if necessary.

This machine has a 1″ Dia.×¾″ Thick., 180-grit diamond sharpening wheel and works on high-speed steel, cobalt, and carbide drills in sizes 3⁄32″-¾″, A-Z, 1-42, and 2.5-19 mm. It sharpens standard, split-point, and masonry drills to 118°, 135°, and custom angles; it can even turn 118° points into 135° split points. Use on drills of any length.

Sharpener has a 1.75-amp, 15,000-rpm motor that runs on 120 VAC, 60 Hz. It includes a plastic carrying case and a 6-ft. power cord with three-prong plug. Size is 5″ Lg.×7¾″ Wd.×4½″ Ht. UL listed.

		Each
Drill Bit Sharpener	**4440A41**	$175.80
Replacement 180-Grit Sharpening Wheel	**4440A42**	23.28
Optional 100-Grit Sharpening Wheel	**4440A43**	23.28
Replacement Chuck	**4440A44**	45.68

Professional Quick and Easy Drill Bit Sharpener

Whether you're an expert or a first-time user, this sharpener gives you professional results. It works in three simple steps: select point angle, align the drill bit, and sharpen. Sharpener will also split the point if necessary. It sharpens a typical ⅛″ drill bit in just 15 seconds and a ¾″ drill bit in only 60 seconds. It has a super-abrasive CBN (cubic boron nitride) wheel that doesn't require coolants and never needs truing or dressing. Material removal is adjustable.

Sharpener handles all high-speed and cobalt steel standard two-flute twist bits such as regular and parabolic flute, straight shank, and reduced shank. It sharpens drill bit sizes ⅛″-¾″, A-Z, 1-30, 3-19 mm, and standard and split points from 118° to 140°. Use on drills 1½″ and longer. Has a 4.5-amp, 115 VAC, 60 Hz, 3,450-rpm motor and includes a 6-ft. power cord with three-prong plug. To sharpen carbide drill bits, see optional diamond wheel (4432A13) below.

		Each
Drill Bit Sharpener	**4432A11**	$1,492.67
Replacement 180-Grit CBN Wheel	**4432A12**	182.00
Optional 180-Grit Diamond Wheel	**4432A13**	197.17

Quick and Easy Knife and Shear Sharpeners

Standard Duty Knife Sharpener

Heavy Duty Knife Sharpener

Shear Sharpener

Simply slide your knife and shear blades along the built-in guides and the internal diamond abrasives restore razor-sharp edges. Sharpeners operate on 120 VAC, 60 Hz and have a 7-ft. power cord with two-prong plug (unless noted). UL listed.

Standard duty knife sharpener creates a strong, triple-bevel edge. Size is 9″ Lg.×3⅝″ Wd.×4⅜″ Ht.

Heavy duty knife sharpener produces a very durable double-bevel edge on straight-edge and serrated blades. Plus, the sharpening segment slides off the base for easy cleaning. Size is 12″ Lg.×5″ Wd.×5″ Ht. Power cord has a three-prong plug.

Shear sharpener is 7⅞″ Lg.×3 9⁄16″ Wd.×3⅞″ Ht. Not for serrated blades, such as pinking or scallop-edge shears, or barbers' scissors.

		Each
Standard Duty Knife Sharpener	**45605A82**	$91.67
Heavy Duty Knife Sharpener	**45605A83**	355.33
Shear Sharpener	**45605A84**	86.67
Replacement Sharpening Module for 45605A83	**45605A91**	120.00
Replacement Guides (Set of Two) for 45605A83	**45605A94**	8.00

Bench-Top Diamond Lapping Machine

Lapping Machine

Grind and polish glass, ceramics, composites, and natural stone with this machine. It uses 12″ dia. magnetic-backed discs (sold separately) so it's easy to change discs quickly. Best used with water, this machine has both recirculating and direct water supply connections. A splash guard brush allows large pieces to pass through while keeping the spray inside the unit.

Powered by a ⅓ hp direct drive motor with a variable speed control from 400 to 1,100 rpm. Motor operates on 115 VAC, 60 Hz.

4413A11 ..... **Each** $1,690.31

Diamond Discs

These diamond-grit discs are flexible, magnetic, and have no arbor hole. Size is 12″ diameter.

Grit		Each
Diamond-Plated Grinding Discs		
120	**4413A21**	$364.29
220	**4413A22**	308.57
400	**4413A23**	263.57
600	**4413A24**	246.43
Diamond Resin Polishing Discs		
600	**4413A31**	238.93
800	**4413A32**	238.93
1800	**4413A33**	238.93
3500	**4413A34**	251.79

Mirror-Finish Shank-Mount Buffing Ball

Made of very soft, synthetic felt, this buff leaves a fine finish. The felt is cut into small sections that get into hard-to-reach spots. Great for use on curves and textured surfaces like diamond-pattern tread. Buff is 6″ dia.; shank is 5⁄16″ dia. Buff material is machine washable and can be washed up to 30 times. Max. rpm is 2,000. Color is orange.

3813A11 ..... **Each** $28.84

Flexible Cylinder Hones

The silicon carbide abrasive in these tools is embedded in balls at the ends of flexible plastic spindles. As a result, they remove material rapidly and leave a smooth, even finish. Use on mild steel, stainless steel, and cast iron.

Hones are produced slightly oversized to provide optimum cutting pressure. *Note:* When your cylinder ID falls between two sizes listed below, order the larger size hone.

Hones should be rotating when inserted into or removed from cylinders. Recommended speed is 800-1,200 rpm for 4 mm-3/16″ cylinder IDs, 700-900 rpm for 1/2″-1 7/8″, 600-800 rpm for 2″-3 3/4″, 400-600 rpm for 4″-7″, 300-500 rpm for 8″-11″, and 80-350 rpm for 12″-16″.

Hones are often used with portable drills, drill presses, and CNC machines. All have twisted wire stems, except those for 9″ and larger cylinder IDs, which have hex shanks.

Color-coding on the stem identifies the grit. ***Coarse*** grit has no color, ***medium*** grit is red, ***fine*** grit is blue, ***extra-fine*** grit is white, and ***ultra-fine*** grit is pink.

Also Available: Hones in larger sizes and with other abrasives: 20- to 800-grit aluminum oxide or boron carbide. Please ask for 4424A999 and specify cylinder ID, abrasive, and grit.

Clean-n-Polish Adjustable Hones for Small Cylinders

A knurled knob on these hones lets you control the amount of pressure exerted on the cylinder so you can adjust the amount of material to remove. The silicon carbide stones have a square end and can hone to the end in step-cut and blind-end cylinders. A 1/4″ diameter flexible drive shaft lets you reach areas normally inaccessible with a rigid shaft. Use with 1/4″, 3/8″, and 1/2″ portable drills. Overall length is 8″. Medium (240) grit stones are 1 1/8″ long; fine (400) grit stones are 1″ long.

For Cylinder Size	No. of Stones Included	Grit	Hones	Each	Replacement Stones	Per Set
11/16″-2 1/2″	2	Medium	6713A21	$15.72	6713A22	$4.31
27/32″-2″	3	Medium	6713A12	16.76	6713A14	5.33
1 1/2″-3 1/8″	3	Fine	6713A16	17.21	6713A17	6.80

Precision Cylinder Hone

Featuring an adjustable micrometer knob for quick and precise cylinder sizing, this hone fits a wide range of cylinder sizes. To use, simply clip two stones and two wipers onto the four racks. Stones are silicon carbide and 5″ long; cleaning wipers are made of felt. Use a portable drill with a ½″ or larger chuck to power the drive shaft. Overall length is 17″.

Hone Set for 3″-4¼″ Cylinders

Includes cylinder hone body, ½″ dia. driver extension, two 80-grit stones, two 180-grit stones, four wipers, four racks, cleaning brush, dressing paddle, and carrying case. (Hones can be used on larger cylinders, but a larger rack set is required. Sold separately.)

6673A12 ..... **Per Set** $228.35

Optional and Replacement Rack Sets

Each set includes four racks: two for stones and two for wipers.

Cylinder Size		Per Set	Cylinder Size		Per Set
2¾″-3¾″	**6673A21**	$26.12	4″-6¼″	**6673A18**	$26.12

Glaze-Breaker Cylinder Hone

With these rugged hones, you can quickly remove the smooth glaze that cylinders develop over time. Hones have a knurled knob that lets you control the amount of pressure exerted on the cylinder and a flexible drive shaft for reaching areas normally inaccessible with a rigid driver.

An adjustable stop collar lets you select 2″-4″ or 4″-7″ cylinder size range. Hone has an overall length of 13″. Use with a portable drill with a ¼″, ⅜″, or ½″ chuck. Sets include three 3″ long silicon carbide stones.

Optional stones are for use after glazing has been removed.

	Grit		Per Set
Cylinder Hone Set	Medium (220)	**6678A12**	$32.91
Replacement Stone Set	Medium (220)	**6678A13**	8.98
Optional Stone Set	Fine (240)	**6678A14**	8.98

Precision Hone for Small Cylinders

Just like our precision hone, but smaller and with shorter stones for greater accuracy. Designed for 1¾″ to 2¾″ cylinders, this hone uses 3½″ long silicon carbide stones and felt wipers that screw on for quick changes. Use a portable drill with a ½″ or larger chuck to power the drive shaft. Overall length is 14″.

Hone Set

Furnished in a sturdy plastic storage case with a drive shaft, six medium (180) grit stones, a dressing paddle, and two wipers in each of the following size ranges: 1.75″-2.20″, 2.05″-2.50″, 2.35″-2.75″.

7362A45 ..... **Per Set** $234.22

Replacement and Optional Stone and Wiper Sets

Each set includes two stones and two wipers.

Expandable Brass Cylinder Laps

Lap and polish the inside of holes with these brass laps. They expand up to 15% for slightly oversized holes and are used for precision lapping, deburring, and polishing of holes in all metals. Laps have a steel shank (arbor), solid brass barrel, and steel adjusting screw.

Use ***through-hole*** laps for long and short holes. ***Blind-hole*** laps permit lapping closed-end holes to the very bottom.

Also Available: Metric size through-hole laps and replacement barrels. Please ask for 4548A8 and specify complete lap or replacement barrel, and exact hole dia. size: 3 mm, 5 mm, 6 mm, 7 mm, 8 mm, 10 mm, 12 mm, 14 mm, 15 mm, 17 mm, 20 mm, or 25 mm.

Also Available: Replacement adjusting screws for all laps listed below. Please ask for 4548A71 and specify adjusting screw for through-hole or blind-hole lap, and lap size.

Super-Finish Diamond Lapping Pastes

When it comes to lapping, diamonds are your best friend. These long-lasting pastes are made of pure, uniform diamond particles suspended in a high-stability base. They remove material quickly, produce exceptionally high-luster finishes, and leave no scratches. Diamond particles have been tested for quality and accuracy of sizing. Use on steel, ceramic, glass, silicon, and other hard surfaces. Furnished in a disposable plastic syringe applicator with protective air-seal cap. Grades 45-3 are color coded for easy identification.

Oil-soluble pastes are good for most applications. Use ***water-soluble*** pastes where oil may contaminate the work surface.

Preparatory lapping grades are used for light stock removal. ***Fine finishing*** grades are for dies, molds, seals, and general flat lapping. ***Extra-fine finishing*** grades are for metallography, semiconductors, ferrite, and optical work.

● Also known as mahogany.

6-Piece Kits— These mixtures meet most lapping needs. Kits contain six 5-gram jars of paste: one each of grades #45, #30, #15, #9, #6, and #3.

		Per Kit
Oil-Soluble Kit	4752A22	$116.51
Water-Soluble Kit	4752A21	$116.51

Boron Carbide Lapping Pastes for Hard Surfaces

Second in hardness only to diamonds, boron carbide grains are an economical alternative. These pastes work well for most applications, especially on hard materials such as heat-treated tool steels, tungsten carbide, Stellite, and aerospace alloys. Furnished in ¼-lb. jars. Color is black.

General Purpose Lapping Paste

Carefully graded abrasive particles are suspended in a soft paste that reduces to a thin, smooth film when subjected to friction. These pastes are typically used when making molds and dies or wherever a fine, scratch-free surface is required. Use for precision lapping and polishing of all metals, including steel, chrome, and hard alloys.

Pastes are nontoxic, noncorrosive to all metals, and even inhibit rust on steel. They resist heat breakdown, so they won't seize during aggressive lapping. Residue removes easily with any alkaline cleaner.

Grit	Abrasive★	Grain Size, microns (0.001 mm)	Color	Applications	2-oz. Jar	Each	12-oz. Jar	Each
90	SC	N/A	Black	Fast Stock Removal	4807A21	$8.11	4807A61	$23.00

Timesaving Lapping and Polishing Powders

These hardworking powders function first as an abrasive and then as a polish. Plus, they're guaranteed not to embed in any metal surface. Perfect for fitting and smoothing the bearing or contact surfaces of rotating, oscillating, and sliding parts.

To use, mix with a thin machine oil (SAE 10 or 20) or heavy gear oil (see page 2174). Powders do not contain harsh abrasives.

Soft-metal grade is for use on brass, bronze, aluminum, copper, tin, and other soft metals. ***Hard-metal grade*** is for use on steel, cast iron, stainless steel, and other hard metals.

To Order: Please specify grit: coarse (80 for soft metal and 40 for hard metal), medium (120 for soft metal and 80 for hard metal), fine (220 for soft and hard metal), or extra fine (320 for soft and hard metal).

	1-lb. Cans	Each	5-lb. Cans	Each
Soft-Metal Grade	4781A4	$25.24	4781A5	$111.43
Hard-Metal Grade	4781A6	25.24	4781A7	111.43

8-Can Trial Kit— One 3-oz. can of each soft-metal and hard-metal grit.
4781A61 ..... Per Kit $73.10

Precision Cast Iron Lapping Plates

Use these precision-ground cast iron plates for final lapping of metal surfaces. They're particularly well-suited for lapping joints and other mating parts to ensure a tight, level fit.

Plates with ***smooth*** surfaces are for fine, precision lapping and are precision ground flat within 0.001″ on both sides.

Plates with ***grooved*** surfaces are for deburring and coarse lapping. Grooves are 1/16″ Wd. × 1/16″ Dp., spaced ½″ apart in a grid pattern. Only one side is grooved; it's precision ground flat within 0.0005″ per 12″.

Combination plate has one smooth side and one grooved side; both are precision ground flat within 0.001″.

Surface	Size, Lg. × Wd.	Thick.	Wt.		Each
Smooth	5″ × 3″	¾″	5 lbs.	2352A11	$102.67
Grooved	18″ × 12″	4″	140 lbs.	2238A1	470.14
Grooved	24″ × 18″	4″	220 lbs.	2238A2	814.46
Grooved	24″ × 24″	4″	300 lbs.	2238A3	1,144.59
Grooved	36″ × 24″	4″	365 lbs.	2238A4	1,470.95
Combination	8″ × 8″	1″	20 lbs.	2352A12	166.83

Clover Silicon Carbide Lapping Pastes

Silicon carbide pastes are great for lapping, grinding, cleaning, honing, and sharpening most metal surfaces to enable smooth mating of metal parts. These pastes work quickly to produce a flat (but usually not polished) surface on all but the hardest, toughest metals. Furnished in 1-lb. cans. Color is gray.

Grease-mix pastes are made with petroleum grease. They have the best lubrication qualities and leave a rust-preventive surface on lapped parts.

Water-mix pastes clean up easily with water.

Grade	Grit	Grain Size, microns (0.001 mm)	Grease Mix	Each	Water Mix	Each

Grease-Mix Paste Assortment— Contains two grades in one double-ended can: 2 oz. of E Coarse (120 grit) and 2 oz. of A Fine (280 grit).

4779A42 ..... **Each** $10.06

Mirror-Luster Synthetic Sapphire Lapping Paste

Whatever the material, these fine-grit synthetic sapphires can polish your work surface to a mirror finish. Particles are very uniform with high purity and medium hardness. Use on all types of metal, ferrite, plastic, and even varnished wood.

Furnished in a soft, oil-soluble paste in a 1.0 micron grain size for light material removal and final finishing (average particle size is 0.001 mm). Cleans up with any water-based cleaner. Furnished ready-to-use in a 1-lb. plastic container. Color is white.

4778A5 ..... **Each** $62.91

Glass and Plastic Scratch Removal Kits

Plastic Scratch Removal Kit

In these kits, you'll find everything you need to remove scratches from glass or plastic surfaces.

Glass Scratch Removal Kit— Effectively removes scratches, scuffs, cloudy surfaces, and hard water etching from glass. Includes cushioned backing pad with ¼″ diameter shank and five color-coded 3″ dia. adhesive-backed discs (two medium grit, two fine grit, and one ultra-fine (polish) grit). Also comes with a 24-oz. plastic spray bottle.

		Each
Glass Scratch Removal Kit	4416A21	$41.15
Pink (Medium Coarse Grit) Replacement Disc	4416A31	2.27
Blue (Medium Grit) Replacement Disc	4416A32	2.27
Salmon (Fine Grit) Replacement Disc	4416A33	2.27
White (Ultra Fine Grit) Replacement Disc	4416A34	6.15
Replacement Backing Pad	4416A35	28.13

Plastic Scratch Removal Kit— Erases scratches, haze, yellowing, scuffs, and hard water etching from all plastic acrylic surfaces. Includes a cushioned backing pad with ¼″ diameter shank, 3″ foam polishing pad, 3″ felt pad, and a 3-oz. jar of restoration paste.

4416A22 ..... **Each** $35.94

Polishing Pads for Glass Surfaces

Made of flexible foam, these pads are specifically engineered for precision polishing of lenses, mirrors, and other glass and ceramic surfaces. They're impregnated with cerium oxide for quick polishing. Grain size is approx. 1 micron (0.001 mm). Pads are 0.050″ thick and have an adhesive backing. Color is brown.

Pad Dia.		Each	Pad Dia.		Each
10″	4342A11	$32.36	18″	4342A15	$104.77
12″	4342A12	70.48	20″	4342A16	119.22
14″	4342A13	91.68	22″	4342A17	134.02
16″	4342A14	97.80	24″	4342A18	166.72

No-Mess Lapping Film

With these films, you can polish your surface without making a mess. They're also impervious to most solvents, so they can be used wet or dry. Films are made of abrasives bonded to a polyester backing.

Aluminum Oxide Abrasive Film— Use on fiber optic connectors, hardwood, glass, plastics, and metals including aluminum. Leaves an ultra-fine finish.

Diamond Abrasive Film— Use on hard surfaces such as titanium and carbides, as well as ceramic connectors and other metals. Leaves a coarse finish.

To Order: Please specify grain size from those listed (where applicable): 60 (light brown), 40 (blue), 30 (light green), 20 (tan).

Sheet Size	Avail. Grain Sizes, microns (0.001 mm)■	Backing Thick.	Pkg. Qty.		Per Pkg.
Aluminum Oxide Abrasive Film					
3″× 8″	60, 40, 30, 20	3 mil	5	4837A11	$1.97
9″×11″	60, 40, 30, 20	3 mil	5	4837A12	11.82
Diamond Abrasive Film					**Each**
3″× 6″	30	3 mil	—	4837A13	$17.48

■ The following are micron (μ)/grit equivalents: 60μ = 220 grit, 40μ = 240 grit, 30μ = 320 grit, and 20μ = 400 grit.

General Purpose Abrasive Grains and Powders

Create your own lapping and polishing compounds by mixing these grains and powders with water, oil, or grease. They can also be used in blasting operations. Furnished in 5-lb. containers.

Grit sizes 16 to *240* are considered grains and their size is controlled by screen tests in accordance with American National Standards Institute (ANSI) B74.12-1976. *Grit sizes 280* to *1200* are considered powders and their size is tested by sedimentation or microscopic methods to conform to established standards.

Aluminum Oxide— For grinding and polishing hard, high-tensile materials such as carbon steels, alloy and high-speed steels, annealed-malleable iron, wrought iron, and bronzes. *Brown (95% Al_2O_3)*—A high-quality general purpose grade. *White (99.5% Al_2O_3)*—Purer and sharper than brown and can accept a dye if necessary.

Black Silicon Carbide (98% SiC)— For brittle materials such as chilled gray iron, cemented carbide tools, hard alloys, glass, marble, stone, and ceramics. Also for low-tensile substances such as brass, soft bronze, aluminum, copper, rubber, and leather.

Grit		Each	Grit		Each

Polishing Compounds for Glass Surfaces

Great for polishing optics and lenses, these compounds also work well on other glass and ceramic surfaces. Grain size is given in microns (1 micron = 0.001 mm).

Cerium Oxide Powder— A tight particle distribution produces ultra-fine finishes. Mix with water. Grain size is 0.6-0.7 microns. Furnished in a 1-lb. jar. Color is off-white.

Zirconium Slurry— Use on infrared materials as well as glass, marble, and granite. Grain size is 0.68 microns. Furnished in a 1-gal. bottle. Color is white.

Optical Pitch— Great for removing scratches in glass lapping surfaces. Furnished in a 2.2-lb. tube. Color is black.

		Each
Cerium Oxide Powder	4335A18	$82.81
Zirconium Slurry	4335A17	170.77
Optical Pitch	4335A16	34.28

Heavy Duty Pleated Cotton Buffs

More material than our other cotton buffs makes these heavy duty buffs more aggressive. Material is cut on the bias to prevent fraying and extend the buff life. Use on all metals and plastics and on straight arbor shafts. All are approximately 1/2″ thick. Mount multiple buffs side-by-side for wider buffing surface area. Color is off-white.

Note: These buffs must be used with flanges. See 4899A on this page.

Ventilated— A ventilated metal center allows cooling air to flow throughout the buff. This increases buff life and allows buffs to be run at high speeds. Also known as airflex buffs.

High Density— Eliminate streaks and marks with these dense buffs. They're made of pleated cloth pressed into a heavy duty fiber center that won't fray or unravel. The pleats create pockets that hold the compound for fast, effective cut-and-color buffing and satin finishing. When run at slow speeds, these buffs are great for plastic and delicate parts that require low heat.

Aggressive-Polishing Cotton Buffs

Individual spiral-sewn, high-grade cotton pieces are cemented together and covered with an outer layer of heavy canvas duck to create these rigid buffs. They work aggressively to remove gouges and scratches and are great for the first step in any buffing operation. Use on all metals.

Also known as setup and polishing wheels, they can be coated with polishing cement and abrasive grain, or used with buffing compounds. Max. rpm is 5,000. For use on straight arbor shafts. Color is off-white.

Medium Density— Have 3/8″ spiral sewing and are softer than the hard-density buffs to conform to irregular surfaces.

Hard Density— Have 1/4″ spiral sewing that allows for aggressive polishing of flat surfaces.

Dia. × Thick. × Arbor	Medium Density	Each	Hard Density	Each

Polishing Cement, 1-gal. pail ..... 4796A1 Each $22.89

Nylon Mesh Abrasive Buffs

With these buffs, you won't need messy compounds to achieve a satin finish. They're made of nonwoven nylon fibers impregnated with aluminum oxide. Use on all metals, glass, plastic, wood, and more. Mount multiple buffs side-by-side for wider buffing surface area. Color is maroon.

Buffs for Mounting on Tapered Spindles

Use ***medium*** buffs for aggressive cleaning and ***fine*** for light cleaning. ***Extra fine*** buffs leave a very smooth finish on intricate parts.

The 2-ply buffs are 1/2″-7/8″ thick; 3-ply are 7/8″-1 1/4″ thick. Max. rpm is 4,500 for the 3″ and 4″ buffs and 3,400 for 6″.

For tapered spindles, see page 2693.

Dia.	Arbor	No. of Plies	Medium, 120 Grit	Each	Fine, 180 Grit	Each	Extra Fine, 240 Grit	Each
3″	1/4″	3	4853A43	$7.11	4853A42	$5.68	4853A41	$5.68
4″	1/4″	2	4853A46	7.11	4853A45	5.59	4853A44	5.59
6″	1/4″	2	4853A49	9.79	4853A48	7.24	4853A47	7.24
6″	1/4″	3	4853A53	13.13	4853A52	9.36	4853A51	9.36

Buffs for Mounting on Straight Shafts

Pleats in these buffs provide flexibility. Buffs have a metal center.

Coarse buffs are used for aggressive cleaning and are 2-ply. Thickness is approximately 1 1/4″. ***Medium*** buffs work well for most blending jobs and are 4-ply. Thickness is approximately 2 1/4″. ***Fine*** buffs produce the smoothest finish and are 4-ply. Thickness is approximately 1 1/4″.

Max. rpm is 1,700 for the 8″ buff, 1,500 for 10″, 1,200 for 12″, and 1,000 for 14″.

Note: These buffs must be used with flanges. See 4899A on this page.

Dia.	Arbor	Center Hub Dia.	Coarse, 80 Grit	Each	Medium, 120 Grit	Each	Fine, 180 Grit	Each

Surface-Smoothing Sisal Buffs

Made of tough woven sisal fiber, these buffs remove coarse surface imperfections. Ideal for initial buffing on hard, ferrous metals such as cast iron and stainless steel. Use with steel-cutting compound (see page 2692).

Buffs are made of 5-ply cloth that's approximately 3/8″-1/2″ thick and 1/4″ spiral sewn to compress material and resist fraying. All are for use on straight arbor shafts. Mount multiple buffs side-by-side for wider buffing surface area. Color is yellow.

To Order: Specify arbor size from those listed.

Dia.	Available Arbor Sizes	Max. rpm		Each
6″	1/2″, 5/8″	3,000	4821A2	$8.29
8″	1/2″, 5/8″, 3/4″	2,800	4821A4	11.86
10″	5/8″, 3/4″, 7/8″, 1″, 1 1/4″	2,600	4821A6	15.11
12″	1 1/4″	2,400	4821A62	18.20

Flexible Cotton and Sisal Strip Buffs

Alternating strips of cotton and woven sisal make these buffs more versatile than all-sisal buffs. They're more flexible for better buffing of irregular shapes and hard-to-reach areas. They also remove less material and leave fewer scratches. Buffs have a metal center and are for use on straight arbor shafts. Use on all types of metal. Also known as finger-style buffs. Color is yellow.

Note: These buffs must be used with flanges. See 4899A on this page.

Dia.	Arbor	Center Hub Dia.	Max. rpm		Each
10″	3/4″	3″	2,400	4358A11	$20.13

High-Luster Cotton Buffs

A

B

C

These muslin cotton buffs are a longtime favorite for producing smooth finishes on metal and plastic. Mount multiple identical buffs side-by-side for wider buffing surface area. Color is off-white.

A Loose Buffs— Soft and flexible. Use these buffs for uneven surfaces and irregular shapes. They're well-suited for light buffing and producing a bright finish. Use on straight arbor shafts. Buffs are 1/4″-1/2″ thick, 20-ply, with one row of stitching around the arbor hole. Max. rpm is 3,000 for the 6″ buff, 2,800 for 8″, 2,600 for 10″, 2,400 for 12″, and 2,000 for 14″.

B Sewn Buffs— More rigid than loose buffs, these are 1/4″ spiral sewn for removing mild scratches and producing a bright finish. Use on flat and easily accessible surfaces. Mount on straight arbor shafts. Buffs are approximately 3/8″ thick and 30-ply. Max. rpm is 3,600 for the 6″ buffs, 3,000 for 8″, 2,500 for 10″, and 1,800 for 12″.

C Miniature Buffs— For buffing small and hard-to-reach areas. The 7/8″-1 1/2″ buffs attach to 1/8″ shank mandrels (listed below) and all sizes can be used with a tapered spindle (see 48885A on page 2693). Use on portable tools. Buffs are approximately 3/16″ thick and 16-ply. Max. rpm is 6,000.

Dia.	Arbor		Each

Satin-Finish Cotton-String Buffs

Densely packed with a soft white cotton yarn, these buffs are ideal for satin finishing large stainless steel surfaces and blending tool marks after fabrication. They're soft and easy to work with, especially on irregular surfaces. For use on straight arbor shafts. Use with satin-finish greaseless compounds. Color is off-white.

Dia.	Thick.	String Lg.	Arbor Dia.	Max. rpm		Each

Mirror-Finish Flannel Buffs

Loose Buff

Sewn Buff

Softer than our other cotton buffs, these buffs leave very fine, high-luster finishes. Known as Canton flannel buffs, they're good for producing a bright finish on precious metals and light buffing on plastics. Mount on straight arbor shafts. Color is off-white.

Loose Buffs— Especially soft and flexible for use on uneven surfaces and irregular shapes. Approximately 3/4″ thick. The 4″, 6″, and 8″ buffs have one row of stitching around the arbor hole; the 10″ and 12″ buffs have two rows. All are 20-ply.

Sewn Buffs— Firm yet soft, these buffs are for use on flat and curved surfaces. Approximately 3/4″-1″ thick with 3/4″ concentric sewing. All are 30-ply. Also known as jewelers' buffs.

Dia.	Arbor	Max. rpm	***Loose Buffs***	Each	***Sewn Buffs***	Each

Rounded Cotton Buff for Right-Angle Grinders

With a 5/8″-11 female thread on the hub, this buff can be used with standard right-angle grinders. The hub is made of durable aluminum, allowing you to replace only the buff when it wears out. The buff flares while spinning for use on depressions and contoured surfaces. Use on metal, fiberglass, and plastic. Max. rpm is 5,000. Color is off-white.

	Dia.		Each
Cotton Buff with Hub	5″	4402A11	$54.00
Replacement Cotton Buff	5″	4402A12	30.86

Shank-Mounted Cotton Buffs

Flat-Face Buff

Round-Face Buff

Designed for use with portable power tools, these buffs have a 1/4″ Dia., 1 1/2″-1 3/4″ Lg. shank. Color is off-white.

Flat-Face Buffs— These economical buffs work well on flat and curved surfaces. Made of 40-ply cotton sheets, they are 1/2″ thick and have one row of stitching for flexibility. Use on all metals.

Round-Face Buffs— Their unique shape makes these buffs perfect for use on internal cylinders, uneven surfaces, and other irregular shapes.

Buff-Cleaning Rake

Recondition and reshape any kind of polishing wheel or buff with this rake. It removes dried compound and eliminates glaze. Perfect for preparing felt polishing wheels to accept polishing cement and abrasive grains. Made of cold-rolled steel, rake is 4 1/2″ Lg. × 2 1/8″ Wd. Handle is wood and 15″ long.

		Each
Buff-Cleaning Rake with Handle	4764A51	$25.48
Replacement Rake	4764A1	10.09

Internal-Surface Cotton Buffs

D

E

F

G

Buff the insides of cylinders, stampings, and tapered objects with these buffs. For use on both metals and plastics. ***Round-end*** and ***square-end*** styles use both the end and the edge to buff the bottom of your object.

Length is approximately the same as diameter (for tapered buffs, at large end). All buffs are for mounting on a tapered spindle or arbor (see page 2693 for tapered spindles and arbors 4762A12 and A14). Color is off-white. Use with tripoli, rouge, greaseless, and other compounds. Max. rpm is 2,400 for the 6″ buffs and 3,600 for all other sizes.

Quick-Change Felt Buffing Discs

Designed for easy mounting, these discs are perfect for final buffing when used with a metal polish or compound. Discs are flexible to conform to contoured and internal surfaces. They're also cool running. Must be mounted on a disc holder (sold separately). Thickness is 3/8″. Color is dark gray.

Style A have a 3M Roloc/Norton Speed-Lok TR-Style plastic disc fastener. ***Style B*** have a Standard Abrasive/Norton Speed-Lok TS-Style metal disc fastener.

Disc holders have a 1/4″ dia. shank.

Fine-Finish Polishing Bobs

No more goop. These fine-grit bobs are bonded with rubber, which cushions while polishing and eliminates the need for messy compounds. Styles C-G have 1 1/4″ long shanks; styles H-N have 1 1/2″ long shanks.

Aluminum oxide bobs work on most metals, including carbon and alloy steel. **To Order:** Please specify grit: 240 (brown), or 400 (white).

Silicon carbide bobs are ideal for use on nonferrous metals such as aluminum, brass, bronze, and magnesium. **To Order:** Please specify grit: 240 (black), 320 (green), or 400 (red).

Polishing Pads for Portable Polishing Tools

Bonnets and Cleaning Tool

Made from real leather sheepskin, these lambswool bonnets won't leave swirl marks and scratches when buffing waxed surfaces. Great for basecoat and clearcoat finishes. Bonnets have a drawstring that attaches to the backup pad on your portable polishing tool. Order one size larger than the backup pad. Pile height is 1 1/4″ for 7 1/2″ dia. bonnet; 1″ for all others. Max. rpm is 1,800.

Bonnet cleaning tool has a multiprong wheel that removes glaze buildup and fluffs packed wool to extend the life of polishing bonnets. Made of rust-resistant plated steel.

Bonnet

Bonnet Cleaning Tool	4922A11	19.33

Foam Pad

Just what you need for most buffing and polishing jobs on acrylic enamel and clearcoat finishes. Use this pad with fine liquid compounds. It's washable and reusable. Pad is 8″ Dia.×2″ Thick and has a 5/8″-11 female spindle thread for use on right-angle polishers. Max. rpm is 2,000.

47855A21 ..... **Each** $14.98

Felt Polishing Wheels

Uniform density makes these highly resilient wool felt wheels better balanced than cotton wheels. Use to polish and buff metal, glass, and stone.

Small-Diameter Wheels

The square edge on these wheels works well on right-angle corners and other tough-to-reach spots. They have a pin hole center for mounting on mandrels or tapered spindles (see 48885A on page 2693). Furnished in medium-hard density. Max. rpm is 1,750.

Dia.×Thick.		Each	Dia.×Thick.		Each	Dia.×Thick.		Each
1″ ×1/8″	4910A34	$0.46	1 1/2″×1/2″	4910A39	$2.50	3″× 3/4″	4910A45	$17.75

2″ ×1/4″	4900A25	2.12			

Mandrels

For small-diameter and knife-edge wheels. Mandrels have a 1/8″ shank. Use on wheels up to 1 1/2″ in diameter. For 2″-4″ dia. wheels, use 48885A tapered spindles on page 2693.

For 1″-1 1/4″ Diameter Wheels—Mandrel head has a 3/8″ long thread that screws into shank for wheel mounting.

4920A19 ..... **Each** $1.02

For 1 1/4″-1 1/2″ Diameter Wheels—Mandrel has 3/8″ long threaded and tapered end for wheel mounting.

4910A52 ..... **Each** $0.71

Large-Diameter Wheels

Wheels have a square edge and a 1/2″ arbor hole for mounting on straight shafts and tapered mandrels. Max. rpm is 3,400.

Choose ***medium density*** wheels for producing a high-polish finish on soft metals such as aluminum and brass, and ***hard density*** wheels for finishing hard metals like steel and iron.

Felt Polishing Bob and Wheel Assortment

This 20-piece kit contains bobs, wheels, and compounds in a clear plastic case. Kit includes 7 medium-density bobs mounted on 1/8″ shanks in the following shapes and sizes (size is head dia.×head lg.): cylindrical 1/2″×1/2″, conical 1/2″×1″, oval 1/2″×1/2″, flame 1/2″×1″, flat-end conical 1/2″×3/4″, flared-end oval 1/2″×3/4″, and ball 1/2″×1/2″. Also includes 4 square-edge wheels, each 3/4″ dia.×1/8″ thick; 4 knife-edge wheels, each 3/4″ dia.×1/8″ thick; a 1/8″ screw-on shank; and 4 polishing compounds, 1 each of tripoli (brown rouge), red rouge, white rouge, and black emery.

4791A71 ..... **Each** $27.45

Polishing Cement

Prepare your polishing wheels for use with abrasive grains. Just coat the wheel with this polishing glue and then apply the abrasive. For use on cloth, canvas, and felt materials. Furnished in a 1-gallon pail.

4796A1 ..... **Each** $22.89

Felt Polishing Bobs

Buff, polish, and lap small areas and tough-to-reach spots with these felt bobs. They are mounted on 1/8″ or 1/4″ dia.×1 1/2″ long steel shanks for use in high-speed portable tools. Use with compounds and abrasive grains. Max. rpm is 15,000.

Choose ***soft density*** for polishing gold, silver, brass, bronze, aluminum, polycarbonate, and acrylic; ***medium density*** for light material removal on nonferrous metals and for finishing tool steel, dies, and other ferrous metals; ***hard density*** for deburring sharp edges and light material removal on hard materials like steel, glass, and crystal; and ***rock-hard density*** for light material removal on very hard materials such as carbide and titanium.

No-Mess Felt Polishing Bobs

With these bobs, there's no need to mess around with polishing cement or compound. Bobs are impregnated with silicon carbide abrasive particles for use on aluminum and other nonferrous metals. All are medium density. To expose fresh abrasive grains, dress the bob with a wire brush. Shank length is 1 1/2″. Max. rpm is 15,000.

Satin-Finish Buffing Compounds

Made of high-quality glue and aluminum oxide grains, these compounds produce a satin finish without leaving a greasy residue. Use on all metals.

Coarse-grit compounds leave a dull satin finish; the finer the grit, the finer the finish it produces. Tube size is approx. 2 1/2″ Dia.×8 1/2″ Lg.

Grit		Each
Extra Coarse, 80	4795A12	$6.30
Coarse, 120	4795A14	6.30

Extra Fine, 300	4795A18	6.14
Ultra Fine, 400	4795A23	7.41

Buffing Bars

Buffing produces a smooth, uniform, lustrous finish by bringing a revolving buff loaded with compound into contact with your part. Most buffing processes have two steps: cutting and coloring. The first step, ***cutting,*** removes scratches and surface imperfections using a fast-cutting compound. It yields a smooth, uniform finish. The second process, ***coloring,*** uses a milder compound to give a bright, mirror-like luster. ***Cut and color*** compounds remove scratches and give a bright finish, all in one step.

Bars are 8″ Lg.×3″ Wd.×2″ Ht. Weight is approximately 2 1/2 lbs.

Compound	Color	For Use On		Each
Cutting				
Steel	Dark Gray	Steel, stainless steel, and iron.	4784A1	$9.81
Tripoli	Brown	Nonferrous metals, such as aluminum, brass, and copper.	4786A1	$6.15
Plastic	Off White	All types of plastic and hard rubber.	4801A1	$7.11
Emery Cake	Black	Nonferrous metals; it gives them a satin finish.	4788A1	$7.74
Coloring				
Steel	Green	Steel and stainless steel.	47955A71	$13.52
White Rouge	Off White	Aluminum, brass, and other nonferrous die cast metals.	4787A1	$5.81
Chrome	White	Chromium-plated work, as well as steel and stainless steel.	4785A2	$14.28
Red Rouge	Red	Brass, copper, and other nonferrous metals.	4783A3	$8.44
Plastic	Off White	All types of plastics and hard rubber.	4801A2	$7.04
Fiberglass	White	Fiberglass, as well as nonferrous metals.	4801A3	$10.00
Cut and Color				
Steel	Yellow	Steel, stainless steel, and aluminum.	4784A2	$10.89
Tripoli	Brown	Nonferrous metals such as aluminum, brass, and copper.	4786A3	$5.96
Chrome	White	Chromium-plated work, as well as steel and stainless steel.	4785A1	$12.12

6-Bar Kit— Includes one bar each of the following compounds: plastic cutting, white-rouge coloring, chrome coloring, red-rouge coloring, steel cut and color, and tripoli cut and color.

4802A14 ..... **Per Kit** $51.81

4-Bar Kit— Includes 4-oz. bars of the following compounds: emery-cake cutting, white-rouge coloring, red-rouge coloring, and tripoli cut and color.

4794A1 ..... **Per Kit** $5.98

Buffing Starter Kit

All you need to get started polishing steel and stainless steel is this kit and a bench-mount motor. Kit includes one sisal and one high-luster sewn cotton 6″ Dia.×½″ Thick.×½″ Arbor buff and one 6″ Dia.×1″ Thick.×½″ Arbor sewn flannel buff. Max. rpm is 3,600. Also includes one each of three 1-lb. buffing bars: cut (gray), color (yellow), and luster (white).

4518A21 ..... **Each** $61.51

Heavy Duty Buffer/Polishers

Optional Right-Hand Buffer Hood

With powerful motors and ball bearings sealed to keep out contaminants, these machines are designed to operate smoothly and last a long time.

Units are equipped with flanges and a stop-start toggle switch. Motors are 115/230 VAC (wired for 115), 60 Hz, one phase, except 4757A1 and 4757A11, which are 115 VAC only. All come with an 8-ft. power cord and three-prong plug, except 4757A17, which includes leads for hardwiring. 4757A17 also includes slide-on spacers that enable you to use wheels of various thicknesses.

See pages 2675-2677 for buffs and polishing wheels.

For Wheel Size, Dia.×Thick.	(A)	hp	No-Load rpm	Shaft Dia.	Wt., lbs.		Each
6″×½″- ¾″	17 5/16″	¼	1,800	½″	24	**4757A1**	$307.30

8″×⅜″-1¼″	28⅜″	¾	1,800	¾″	55	**4757A12**	607.46
8″×⅜″-1¼″	28⅜″	¾	3,600	¾″	56	**4757A15**	607.46
10″×½″-1¼″	29 15/16″	1½	3,600	⅞″	61	**4757A17**	794.07

Universal Pedestal—For machines above. Made of cast iron and steel. Height is 32⅞″; base is 15¾″ Wd.×14″ Dp. Weight is 62 lbs.

Note: A picture of this pedestal is shown on page 2645.

4423A3 ..... **Each** $336.12

Optional Buffer Hoods—Protect your work area from flying debris with these vented buffer hoods. They're made of steel and easy to mount. Hoods are designed to fit only the buffer/polishers sold above. **To Order:** Please specify left- or right-hand hood.

Note: 4757A6 can be used only if the buffer is on a pedestal.

For Buffer/Polisher No.	Hood Size, Dia.×Wd.	Outlet Dia.		Each
4757A1 and A11	7″×4″	3″	**4757A6**	$110.40
4757A12 and A15	9″×7″	4″	**4757A7**	132.25
4757A17	11″×7½″	4″	**4757A8**	151.80

DeWalt Electric Right-Angle Polisher

A speed-control dial on this high-performance 7″ variable-speed polisher allows you to set the desired no-load rpm: 0-1,000 or 0-3,000. Polisher is double insulated and has a spindle lock for easy removal of pads. Spindle thread is ⅝″-11. Operates on 120 VAC, 50/60 Hz at 8 amps. Polisher is 17 5/16″ long and weighs 8¼ lbs. Includes two-position side handle for left- and right-hand operation, 7″ diameter rubber backing pad, and an 8-ft. power cord with two-prong plug. UL listed and CSA certified. Meets OSHA requirements.

		Each
DeWalt DW849 7″ Polisher	**4814A16**	$248.65
Replacement Backup Pad	**4814A21**	35.00

Air-Powered Right-Angle Polisher

This 7″ polisher has a regulator for positive speed control. Operates on 90 psi air pressure. Exhaust system is muffled for quieter operation. Spindle thread is ⅝″-11. Air inlet is ¼″ NPT female. Recommended hose size is ⅜″. No-load rpm is 2,500. Motor is 1 hp. Avg. cfm @ 90 psi is 12. Overall length is 16″. Weight is 5 lbs. Includes two-position side handle for left- and right-hand operation and 7″ dia. rubber backing pad.

44545A37 ..... **Each** $242.47

Miniature Light Duty Buffer/Grinder

This handy buffer/grinder is perfect for occasional tool sharpening, cleaning, and touch-up work. It features a dial-operated speed control that adjusts rpm from 1,800 to 7,000. The motor is ⅙-hp, 115 VAC, 50/60 Hz, one phase. Machine is 5⅛″ high and 13″ long from the end of one spindle to the other. Base is 6″ Lg.×5″ Wd. The motor shaft is 5/16″ dia. and extends 1 1/16″ from the housing. Weight is 7½ lbs. *Note:* Maximum buff size is 4″ dia. Maximum grinding wheel size is 2″ dia.

Furnished with 3″ dia. cotton buff, 1¾″ dia. 60-grit aluminum oxide grinding wheel, tapered spindle, ¼″ dia. wheel arbor, and 6-ft. power cord with three-prong plug. CSA certified.

		Each
Mini Buffer/Grinder	**4755A6**	$244.36
Replacement 3″ Dia. Cotton Buff	**4755A62**	4.28
Replacement 1¾″ Dia., 60-grit Grinding Wheel	**4755A61**	5.76

Electric Swirl-Free Polisher

Eliminate swirl marks without damaging painted surfaces. Also known as a random-orbital polisher, it features a counterbalanced bottom plate to reduce vibration. It has a comfort-grip side handle and an impact-resistant housing. Includes two terry cloth application bonnets, two terry cloth polishing bonnets, two lambswool polishing bonnets, a wool-blend wash mitt, and a plastic case. Operates on 120 VAC, 60 Hz. UL listed. Additional bonnets are sold separately below.

Polisher

Pad Dia.	Orbits/ Min.	Amps	Wt., lbs.	Cord Lg.	Plug Type		Each

Buffing Spindles, Arbors, and Chuck

Secure buffing wheels to your existing bench-mount motor or replace worn-out spindles on your buffer.

A&B ***Tapered Spindles***—Using centrifugal force, these spindles secure soft-center wheels such as muslin buffs, felt polishing wheels, and wheel brushes. *Straight-shank tapered spindles (Style A)* can be used with wheels that have up to a ¼″ arbor hole. *Hollow-shank tapered spindles (Style B)* fit on straight shafts and are held with two set screws. Can be used with wheels that have up to a ½″ arbor hole, unless noted.

C-E ***Brass Wheel Arbors and Steel Chuck***—For use with polishing lathes and buffing machines that have tapered shafts. All have a 0.370″ mounting hole.

(A) Straight-Shank Tapered Spindles—Right Hand

Shank Dia.	O'all Lg.	Max. Taper Dia.	Taper Lg.	Thread Lg.		Each

D	Left Hand for Soft Wheel	Pinhole to ½″	**4762A14**	13.28
Steel Chuck with Brass Shaft				
E	Burr Chuck, Right Hand	¼″ Shank	**4762A22**	20.90

▲ Maximum wheel width is ¼″.

About Finishing Media

There are a number of variables involved in any mass finishing process. The following information provides some suggestions regarding applications and quantities of each media, but some adjustment will be required to produce the desired finish.

***Ceramic*—**The best media for removing large amounts of material. Great for rapid deburring, it can also be used for polishing. Ratios of media to parts are as follows: 2 to 1 for heavy material removal, 4 to 1 for deburring, and 5 to 1 for polishing.

***Plastic*—**Produces a smoother finish than ceramic and can also be used for deburring. Ratio of media to parts is 4 to 1.

***Porcelain*—**Good for burnishing and polishing. Ratio of media to parts is 5 or 6 to 1.

***Organic*—**Leaves the finest finish. Can also be used for deburring. Ratio of media to parts is 3 or 4 to 1.

For more information about organic media and steel shot, see page 2716.

Ceramic and Plastic Media Shapes

V-Cylindrical
The most popular shape for all-purpose use, it has sharp edges for efficient deburring and a curved radius for producing a fine finish. Penetrates recesses and holes without lodging.

Cylindrical
Excellent for deburring holes and for putting the smoothest finish on parts. The ends are cut on a 22° or 45° diagonal.

Triangular
For fast deburring. The edges reach into corners and slotted areas, while the flat sides allow extensive surface contact for a good finish. The ends are cut on a 25°, 45°, or 60° diagonal.

Ceramic Media

Ceramic media makes for dependable deburring, edge rounding, polishing, and blending on all metals. Choose media in a size that's large enough not to lodge in recesses or holes in the parts you want to finish. Density is 90 lbs./cu. ft, except high energy, which is 108 lbs./cu. ft.

***Coarse*—**For fast removal of tough burrs and blending grind lines. Use with #1 Liquid Cleaner (4918A31), sold separately on this page.

***Fine*—**Designed for light material removal, this media produces a matte finish on all metals and can be used for light deburring, edge rounding, and before plating. Use with #1 Liquid Cleaner (4918A31) or #2 Liquid Burnisher (4918A32), both sold separately on this page.

***Polishing*—**Nonabrasive material for burnishing and coloring. Use with #2 Liquid Burnisher (4918A32), sold separately on this page.

***High Energy*—**Contains ultra-fine abrasives that produce a light matte finish and resist fractures for long life. Ideal for use in centrifugal finishing machines. Use with #1 Liquid Cleaner (4918A31), sold separately on this page.

Featherweight Plastic and Ceramic Fine-Finish Media

Their light weight means these media have mild abrasive properties and yield smooth finishes. For an even finer finish, follow with a dry polish. Use on all metals for deburring and before plating.

***Plastic*—**Produces a smooth surface. Extra light weight means it's perfect for use on gold. Density is 60 lbs./cu. ft. Use with #1 Liquid Cleaner (4918A31), sold separately on this page.

***Lightweight Ceramic*—**This media resists foaming and won't leave a residue. Density is 70 lbs./cu. ft. Use with #1 Liquid Cleaner (4918A31) or #2 Liquid Burnisher (4918A32), both sold separately on this page.

Liquid Compounds for Media

Keep media and liquid solutions clean, rust free, and fast acting. Mix 1-2 oz. of compound with 1 gallon of water, and then add the solution to your media. Sold in 5-gallon pails. **Also Available:** 55-gallon drums. Please ask for 4918A999 and specify compound type and 55-gallon drum.

***#1 Liquid Cleaner*—**For use on all metals. It conditions water, washes away soils that might limit the effectiveness of the media, and is free rinsing. Contains a rust inhibitor. Use with any media.

4918A31 ..... **Each** $74.09

***#2 Liquid Burnisher*—**Highly concentrated neutral liquid puts the brightest finish on metal. Provides some rust protection. Use with ceramic, plastic, and porcelain media.

4918A32 ..... **Each** $93.43

***#3 Liquid Burnisher*—**This mildly acidic compound is primarily used with steel media to impart brilliant color to all metals except zinc. When used with ceramic and plastic media, it removes light heat-treat scale. Provides good short-term rust protection.

4918A33 ..... **Each** $127.72

***#4 Rust Inhibitor/Cleaner*—**Concentrated alkaline rust inhibitor for ferrous metals. Great for dip tanks and vibratory and barrel tumblers. Use with any media.

4918A34 ..... **Each** $102.28

Porcelain Burnishing Media

For a bright finish on metal, try this porcelain media. Often used as a second step after ceramic or plastic, it's ideal for fragile parts and won't contaminate nonferrous materials. Use as an alternative to steel or stainless steel media. Density is 100 lbs./cu. ft. Use with #2 or #3 Liquid Burnisher (4918A32 or A33), both sold separately on this page. Furnished in 5-lb. packages.

Dia.		Per Pkg.	Dia.		Per Pkg.

2 mm	4334A32	48.92	6 mm	4334A35	47.80
3 mm	4334A33	47.80			

Organic Superfine Finishing Media

Use organic media as a final step for an exceptionally lustrous finish. Media remove tarnish and oxidation without scratching. Run dry. For more information about media, see page 2694.

Corn Cob— A popular and economical choice for removing tarnish and small scratches, corn cob is perfect for parts with fine detail or engraving. It's treated with polishing compound and leaves a finer finish than walnut shells. Use on aluminum, nickel, brass, and silver. Density is 32 lbs./cu. ft.

Walnut Shell— Treated with red rouge. Use on colored metals such as brass and gold. Density is 36 lbs./cu. ft.

	Pkg. Wt., lbs.		Per Pkg.

Walnut Shell	10	4947A21	62.80

About Mass Finishing Machines

There are three types of mass finishing machines: barrel tumblers, vibratory machines, and centrifugal machines. The primary difference between them is the amount of time it takes each one to complete a cycle. In general, the same results are produced by a barrel tumbler in 100 minutes, a vibratory machine in 10 minutes, and a centrifugal machine in 1 minute.

Rotary Barrel Tumblers— Gravitational force causes abrasion as the barrel rotates. Good for flat parts. Operate at 50-60% capacity. For wet use, fill with liquid up to the level of the parts and media.

Vibratory Finishing Machines— Different weights attached to the sides of the bowl cause it to vibrate. These machines work well on recessed areas, large parts, and delicate parts that require close tolerances. Operate at 100% capacity. For wet use, use just enough liquid to keep the parts and media wet.

Quick-Finish Centrifugal Finishing Machines— A spinning disk at the bottom of these machines forces material upward for extremely fast abrasion. Use for small parts. Operate at 40-50% capacity. For wet use, adjust the included flow control device for a steady drip.

Rotary Barrel Tumblers

The rotation of these watertight barrels allows both wet and dry deburring, burnishing, and polishing of different sized parts. Particularly useful for flat parts that can stick together in other machines. Operate on 115-120 VAC, 60 Hz.

General Purpose— Molded rubber barrels and 1/75-hp (unless noted) electric motors result in economic, quiet, and efficient operation for tumbling small parts. Include a 6-ft. power cord with two-prong plug.

Heavy Duty— Bigger barrels and more powerful (1/3 hp) motors than our general purpose tumblers. Rubber-lined steel barrels and superior bearings result in quiet operation. Have a 7-ft. power cord with three-prong plug.

General Purpose

★ Hex is measured across the flats. ● Two-barrel tumbler with barrels mounted side-by-side. ■ Motor is 1/50 hp.

Vibratory Finishing Machines

Unlike rotary barrel tumblers, these machines keep parts and media in constant motion for faster finishing and more aggressive deburring. All units have a polyethylene bowl for wet and dry operation.

General Purpose— Have a removable bowl with lid, steel base, on/off switch, motor, and 6-ft. power cord with three-prong plug. Not recommended for use with steel media. *Model* 48165A24 has an adjustable vibration feature that increases bowl movement for more aggressive, faster finishing. **Also Available:** Replacement bowls and motors. Please ask for 48165A61 and specify bowl or motor, voltage, and capacity.

Heavy Duty— With a thicker bowl than general purpose machines, these models accommodate steel media in addition to ceramic and plastic. The bowl has a clear plastic lid that reduces noise while letting you see work in progress, and a drain for easy cleanup. Machines also have a metal base and an on/off timer. Vibration can be adjusted for use with steel media and other heavy loads. They include a 5-ft. power cord with three-prong plug.

Quick-Finish Centrifugal Finishing Machines

Perfect for cleaning and polishing small parts, these machines have a spinning disk in the base that generates more energy than rotary tumblers or vibratory machines to drastically shorten the finishing process. All operate on 115 VAC, 50/60 Hz and have a 3-ft. power cord with three-prong plug.

General Purpose— Designed for use with delicate workpieces, these machines feature a 12-hour timer. Overall size is 9½″ Dia. × 13½″ Ht.

Dry machine comes with 2.2 lbs. of coarse walnut media, 2.2 lbs. of fine walnut media, and 7 oz. of polishing paste. *Wet machine* is for use with plastic media and ceramic media no smaller than 3 mm. It comes with 2.9 lbs. of fine plastic pyramid grinding chips, 2.9 lbs. of fine plastic cone grinding chips, 1 qt. of grinding compound, and a plastic tank for waste water.

Heavy Duty— A replaceable bowl system enables dry, wet, and magnetic finishing processes on the same machine. Power base and bowls sold separately.

Power base features a 60-minute timer, digital speed control, and a sensor that automatically adjusts the machine for the appropriate process. Base is 10⅝″ Ht. × 14 3/16″ Wd. × 13 13/16″ Dp. *Wet bowl* is furnished with pump and recirculating tub. Use with plastic or ceramic media. *Magnetic bowl* is used for magnetic pin burnishing. It comes with 0.44 lbs. of steel pin media and 1 qt. of burnishing compound.

About Power Brushes

This alternative to abrasive wheels, sandblasting, and other methods of removing surface contamination does not change the workpiece's dimensional tolerances, tensile strength, or resistance to heat or other elements. Brushes are made with wires and filaments, so they don't leave abrasive dust, which reduces the need to clean workpieces.

Safety Note: Do not exceed the maximum speed listed for each brush. The maximum rpm ratings listed are the maximum speed at which the brush should be run with no work applied (spinning free).

Metal Bristle Types

Rigid Bristle— Partial Twist

Rigid Bristle— Full Twist

Rigid Bristle— Extra Tight Full Twist

Flexible Bristle

Rigid Bristle— Also known as knot wire. Multiple bristles are twisted together for maximum impact in heavy duty applications. *Partial twist* has a slight tuft on the end to give some flexibility on irregular surfaces. *Full twist* is twisted to the end of the bristles for very aggressive cutting. *Extra tight full twist* is also called stringer bead twist knot. Fewer bristles in each twist result in the fastest, most aggressive, and highest-impact finishing. The tight twists also form a narrow face that can fit into small spaces.

Flexible Bristle— Also known as crimped wire, these bristles are bent to support each other. Use for light to medium duty brushing on irregular surfaces or those that could be damaged by the impact of rigid bristles.

Coated Bristle— Also known as encapsulated. Only the bristle tips are exposed; the rest of the bristle is encased in a synthetic compound to limit flexing and maximize cutting action.

Materials and Applications

Bristle Material	Features and Benefits	Applications
Carbon Steel	Most widely used bristle material. Combines cutting ability and fatigue resistance for long brush life at a low cost. Wire is heat treated and tempered, unless noted.	General purpose cleaning, rust removal, deburring, edge blending, weld preparation, and roughing for adhesion.
Stainless Steel	Highly corrosion and heat resistant. Unlike carbon steel, stainless steel does not leave deposits that can cause rust when used on stainless steel, aluminum, and other high-strength alloys. However, once used on carbon steel workpieces, do not use on stainless steel or rusting can occur.	Use in corrosive environments for general purpose cleaning, rust removal, deburring, edge blending, and roughing for adhesion.
Brass	Nonsparking wire offers protection in flammable conditions. Brass is softer, more flexible, and has better nonscratching characteristics than carbon steel. *Note:* Brush hubs and other devices that hold the bristle on the brush are not made of brass and will not provide 100% nonsparking protection.	Light to medium cleaning and luster finishing.
Abrasive Nylon	Flexible nylon bristles are impregnated with silicon carbide or aluminum oxide grain. These bristles reach surfaces metal wires can't because the sides of the bristles act as flexible files to do most of the work, where wire brushes use only the bristle tips.	Use wet or dry for deburring, edge breaking, blending, dulling surfaces, and stain removal. Suitable for finishing hard metals and advanced composites.
Nylon	Resistant to most acids and alkalies.	Use dry, wet, or with an abrasive slurry for cleaning, polishing, buffing, and scrubbing. *Note:* Wet scrubbing above 120°F will cause a loss of stiffness and accelerate brush wear.
Horsehair	A very durable material for scratch-free dry brushing. Not resistant to acids or alkalies.	Buffing, cleaning, dusting, and finishing.
Tampico	Heat, alkali, and acid resistant. Porous fibers absorb water and work wet or dry. More aggressive than nylon and horsehair.	Removing surface particles and tool marks, dusting, wet scrubbing, cleaning, and spreading liquids. Excellent for removing light feather burrs and for light edge blending when used with a compound.

For information about power brushes, see page 2696.

Rigid-Bristle Shank-Mount Brushes

Made for areas with limited accessibility, these brushes have partial-twist bristles for more aggressive brushing than flexible bristles. Brushes are shank mounted for quick installation into chucks and collets. Shank diameter is 1/4″. Applications include weld cleaning, tool and die work, and mold and pipe cleaning. Use with straight and right-angle die grinders, drills, drill presses, and some CNC machines. Choose bristles made of carbon steel or Type 302 stainless steel.

1/4″ dia. brushes are made of a single twist of bristles and work well in even the tiniest spots.

1″ Brush Dia.

Flexible-Bristle Shank-Mount Brushes

A small surface area makes these brushes perfect for detailed cleaning, deburring, blending, and polishing. They also work well in hard-to-reach places. Bristles are crimped, unless noted.

1/8″ Shank Brushes— Designed for precise, light jobs, these brushes have a small shank for use in flexible shaft tools, die grinders, and Dremel-style rotary tools. Shanks are 1 1/4″ long. Package quantity is 12.

1/4″ Shank Brushes— Use with larger die grinder collets, drill chucks, and some CNC machines to brush larger surfaces. *Coated housing* brushes have a plastic coating to protect workpieces from marks and scratches. *Vari-trim* brushes have removable nylon rings and are extra aggressive. Adjust rings to change bristle length. Shanks are 3/4″-7/8″ long.

Flexible-Bristle Shank-Mount Cup Brushes

1/8″ Shank

1/4″ Shank

1/4″ Shank Abrasive Nylon

Featuring a larger brush diameter than most shank-mount brushes, these cup brushes work well for deburring, cleaning, and finishing large surface areas. Bristles are crimped, except for horsehair and goat hair.

1/8″ Shank Dia. Brushes—Have a small shank for use in flexible shaft tools, die grinders, and Dremel-style rotary tools.

1/4″ Shank Dia. Brushes—Fit into larger die grinder collets and drill chucks for brushing large surfaces.

1/8″ Shank Dia. Brushes—Shanks are 1½″ long.

Flexible- and Rigid-Bristle Shank-Mount Wheel Brushes

1/8″ Shank

1/4″ Shank Flexible Bristle

1/4″ Shank Abrasive Nylon

1/4″ Shank Rigid Bristle–Partial Twist

Their slim wheel shape enables these brushes to fit into slots, corners, and contoured surfaces. Perfect for light- to medium-duty cleaning, deburring, finishing, and blending jobs. ***Flexible bristles*** are crimped, except horsehair and goat hair; ***rigid bristles*** are not.

1/8″ Shank Dia. Brushes—Have a small shank for use with flexible shaft tools, die grinders, and Dremel-style rotary tools for precise work. Shanks are 1½″ long. Package quantity is 12.

1/4″ Shank Dia. Brushes—Fit into larger die grinder collets, drill chucks, and some CNC machines. Use on larger surfaces. Shanks are 7/8″-1″ long.

For information about power brushes, see page 2696.

Flared Flexible-Bristle Shank-Mount Brushes

Flared

Circular Flared

Concave Flared

When you need a brush that conforms to curves, corners, holes, and other irregular surfaces, these flared brushes are just what you're looking for. Brushes have crimped bristles and 1/4″ dia. shanks for use with die grinders, drills, drill presses, and CNC machines.

Flared and ***Circular Flared Brushes—*** Good for use in blind holes. Shanks are 3/4″-7/8″ long.

Concave Flared Brushes— Similar to wheel brushes, but more flexible for use on irregular surfaces. Shanks are 1″ long.

Flexi-Reach Coil Spring Shank-Mount Brushes

A flexible coil spring on these brushes surrounds the bristles to enable easy cleaning in hard-to-reach corners and deep cavities. As the brush wears, the spring can be trimmed. Bristles are carbon steel. Shanks are 1″ long.

CAUTION: Insert brush into the workpiece before turning on the power tool. If used outside a hole, the brush could break off and become a dangerous projectile.

Aggressive Coated-Bristle Shank-Mount Brushes

A

B

The tough, synthetic compound that encases the bristles wears away gradually to expose unused bristles. As a result, these brushes are very aggressive and long lasting. Great for heavy duty cleaning. Bristles are crimped, but not flexible. Shanks are 1/4″ Dia. × 3/4″ Lg. for use with die grinders and drills.

Style A— Works well on edges and large areas.

Style B— Great for cleaning corners and other hard-to-reach areas.

Drilled Hole Deburring Shank-Mount Brushes

Simply insert the pilot into a hole, and these brushes remove burrs and sharp edges around the hole's surface. Perfect for cleaning the edges of holes prior to installing rivets or other fasteners.

Bristles are made of Type 302 stainless steel; cup is zinc-plated steel. Outer diameter is 1/16″ larger than brush diameter. Exposed bristle length is 1/8″. All shanks are 1/4″ dia. and 3/4″-7/8″ long.

Scratchless Ceramic Bristle Shank-Mount Brushes

C D

The ceramic fiber bristles in these brushes are designed for deburring, but they also leave a smooth, scratch-free finish. Shanks are 1 1/8″ long.

Style C— Has a 1/8″ dia. shank for use with rotary hand tools.

Style D— Adjust the protrusion of the bristles when the ends wear down. Bristle length listed is the maximum recommended exposed length. All have a 15/64″ dia. shank for use with milling and similar machines.

2 1/2″	Fine (240)	1,000	4361A13	44.69

For information about power brushes, see page 2696.

Rigid-Bristle Threaded-Arbor Cup Brushes

Partial Twist

Partial Twist—with Built-In Guard

Partial Twist—with Collar

Rigid bristles work more aggressively than flexible ones for fast, heavy duty brushing. Great for weld cleaning. Use with right-angle grinders.

Double row brushes have two rows of twisted bristles that provide a larger bristle surface area.

Brushes ***with built-in guard*** have protective flaps that surround the bristles and keep dust, particles, and flying bristles away from the user.

Brushes ***with collar*** have a metal band around the bristles to limit flaring. Band can be removed when bristle tips wear down.

Every other bristle twist in ***alternating*** brushes is twisted in the opposite direction, resulting in longer life and smoother surface finishes.

Flexible-Bristle Threaded-Arbor Cup Brushes

Carbon Steel

Brass Coated with Built-In Guard—Multistrand Crimped

Less aggressive than their rigid-bristle counterparts, these brushes are perfect for light to medium duty deburring, blending, and finishing tasks. Bristles are crimped. Use with right-angle grinders.

Brass-coated brushes with built-in guard are made of carbon steel and coated with brass for corrosion resistance. Protective flaps keep particles and flying bristles away from the user. *Multistrand crimped* brushes have 12 wires twisted into each bristle for longer brush life.

For information about power brushes, see page 2696.

Miniature Diamond Abrasive Shank-Mount Brushes for Composites

With diamond-impregnated flexible bristles, these brushes produce smooth, polished finishes on composite materials. All have a 3/32″ shank dia. Max. rpm is 3,000.

A B

	Brush Dia.	Bristle Dia.	Bristle Lg.	O'all Lg.	Shank Lg.

B	5/32″	0.008″	1/4″	1 3/16″	9/16″	4357A13	10.50

Abrasive-Bristle Cup Brushes

Flexible nylon bristles impregnated with silicon carbide allow these brushes to debur and remove corrosion around contours in your workpiece. Plus, they won't leave scratches like metal bristles. All have a 7/8″ arbor hole. Each requires a backup pad and retaining nut, both sold separately. Bristle length is 3/4″.

Retaining nuts have a 5/8″-11 thread.

To Order: For brushes, please specify grit: 46 (coarse), 60 (medium coarse), 80 (medium coarse), 120 (medium), 180 (fine), or 320 (extra fine).

Disc Dia.	Max. rpm	Cup Brushes		Backup Pad		Retaining Nut	
5″	10,000	44565A11	$37.02	44565A82	$18.90	4655A27	$5.50
7″	6,000	44565A21	69.85	44565A84	28.42	4655A28	5.50

Abrasive-Bristle Discs

Made of plastic and impregnated with aluminum oxide abrasive (unless noted), these bristles can reach into tight spots. They wear down evenly to expose new abrasive and produce uniform finishes. Use for light to medium deburring, cleaning, blending, and polishing. Use with die grinders, unless noted. Grit is designated by color of bristles: 36 is dark brown, 50 is green, 80 is yellow, 120 is white, 220 is red, and 400 is blue.

Quick-Change Discs—Have a 3M Roloc style fastener that mounts to a disc holder, sold separately.

Mandrel-Mount Discs—Require a mandrel, sold separately.

Cup-style discs work well in corners and on uneven surfaces. Typically used with right-angle die grinders, unless noted.

Flat-style discs work well in grooves, on small parts, and in hard to reach areas.

Bench and Pedestal Discs—For use on bench and pedestal grinders and similar machines. Abrasive is ceramic aluminum oxide.

Quick-Change Cup-Style Disc

Quick-Change Flat-Style Disc

Mandrel-Mount Flat-Style Disc

■ Has flexible, crimped bristles. Not available with 3/8″-24 arbor.
♠ Not available with 1/2″-13 arbor.
★ Not available with 3/8″-24 or 1/2″-13 arbor.

Flexible-Bristle Wheel Brushes for Tapered-Spindle Buffer/Grinders

Wood hubs with lead-filled centers make these brushes easy to mount on tapered spindles (sold separately on page 2693). Bristles are extra-fine, long, and flexible for soft brushing.

Carbon steel and ***brass*** bristles are crimped for cleaning nonferrous and precious metals and producing fine-satin and brushed finishes. Use ***horsehair*** bristles for scratch-free cleaning.

For information about power brushes, see page 2696.

Rigid-Bristle Wheel Brushes

Partial Twist

Full Twist

Extra-Tight Full Twist

When your job calls for fast cutting and maximum cleaning, these strong twisted wire brushes are a powerful choice. Applications include heavy duty deburring and removing rust, scale, and weld spatter. Also for surface conditioning and roughing.

Partial twist brushes work well on irregular surfaces. Every other bristle twist in *alternating partial twist* brushes is twisted in the opposite direction, resulting in longer brush life. ***Full twist*** brushes have bristles twisted all the way to the ends and are more aggressive than partial twist brushes. ***Extra-tight full twist*** brushes, also called stringer bead brushes, have smaller, tighter bristle twists for the fastest and most aggressive finishing.

Note: Brushes with a 2″ arbor hole require snap-in metal adapters if a smaller hole is needed. For adapters, see 4844A sold separately below.

♦ Furnished with reducer bushing to accommodate both arbor sizes. ♠ Bristle dia.: 0.016″. ● Has double keyways for shafts with keyway.

Snap-In Metal Arbor Adapters—For use with brushes that have a 2″ arbor hole.

Reduce Arbor Hole	For Wheel Dia.		Pair
From 2″ to 1/2″	6″	4844A28	$1.13
From 2″ to 5/8″	6″ and 8″	4844A29	1.13
From 2″ to 3/4″	6″, 8″, and 10″	4844A31	1.13
From 2″ to 7/8″	6″, 8″, and 10″	4844A32	1.13
From 2″ to 1″	Up to 12″	4844A33	$1.13
From 2″ to 1 1/4″	Up to 12″	4844A34	1.13
From 2″ to 1 1/2″	Up to 12″	4844A35	1.13

For information about power brushes, see page 2696.

Flexible-Bristle Wheel Brushes

Flexible bristles make these brushes less aggressive than rigid-bristle brushes. Use for light to medium duty deburring, cleaning, blending, and finishing. Bristles are crimped (unless noted).

Economy carbon steel brushes are for use in light duty operations. Bristles are not heat treated or tempered.

Note: Brushes with a 2″ arbor hole require snap-in metal arbor adapters if a smaller hole is needed. For adapters, see 4844A on page 2702.

◆ Furnished with reducer bushing to accommodate both arbor sizes.
♥ **To Order:** Please specify thread: 3/8″-24, 1/2″-13, 5/8″-11, 10×1.25 mm, or 14×2.0 mm.
● Has double keyways for shafts with keyway. ★80 grit is not available. ■Bristles are not crimped.

About Twisted-Wire Brushes

Also known as tube, hole, and side-action brushes, these brushes have bristles twisted onto the stem for cleaning, deburring, and finishing the insides of tubes and cylinders. Always rotate the brush in a clockwise direction. Reversing the direction may loosen the stem wires.

BRUSH CONSTRUCTION

Single-Spiral Single-Stem— Bristles are twisted between two stem wires to create a single spiral. A good economical choice.

Single-Spiral Double-Stem— Similar to single-spiral single-stem, but with four stem wires instead of two. The extra stem wires make these brushes stronger, more rigid, and more aggressive.

Double-Spiral Double-Stem— Bristles twisted between the four stem wires creates two spirals in different directions. The stem wires form a rigid core, and the double spiral holds more bristles than a single spiral, making these brushes the most aggressive.

BRUSH TYPES

Twisted-Wire Power Brushes— Normally used in air, electric, and cordless drills; drill presses; and some CNC machines.

Threaded-Shank Twisted-Wire Brushes— Use 1/4″ to 1″ dia. threaded-shank brushes with handles and extension rods (see page 2706) or powered tube cleaners (see page 2032). The 1 1/4″ dia. and larger brushes are normally used with handles and extension rods and drain-cleaning machines. Choose brush thread based on handle connection. For example, male threaded brush mates with female handle.

BRISTLE MATERIALS

Carbon Steel— Strong wire bristles for aggressive brushing. ***Stainless Steel—*** Strong and corrosion resistant. Unlike carbon steel, bristles won't leave small fibers that can cause rust. Good for use on stainless steel and aluminum. ***Brass—*** Soft, fine wire bristles that won't scratch or mar surfaces. ***Nylon*** and ***Polypropylene—*** Synthetic bristles withstand corrosive acids and alkalies. Also for light dusting. Wet brushing with *nylon* at temperatures above 120° F results in brush wear and some loss of stiffness. *Polypropylene* is more durable than nylon and can be used with strong solvents and in temperatures up to 210° F. ***Abrasive Nylon—*** Bristles are impregnated with an abrasive grain. Use wet or dry. ***Tampico—*** A natural fiber for scrubbing and cleaning jobs. Use with a compound for light deburring and finishing. ***Horsehair—*** For dry, scratch-free cleaning and dusting.

Single- and Double-Spiral Power Brushes

Single Spiral

Double Spiral

Max. rpm is 2,000. Package quantity is 12, unless noted. ***Abrasive nylon*** bristles are impregnated with 120-grit silicon carbide.

Food-Grade Nylon Threaded-Shank Brushes

Food-grade white nylon bristles and stainless steel threaded stems make these brushes ideal for food, beverage, and pharmaceutical applications. All are single spiral, double stem. Stems are Type 304 stainless steel and have 1/4″ NPT male threads. Brush length is 4 1/2″. Overall length is 7″. Max. rpm is 1,750.

Nylon extension rod is 48″ long and has a 1/4″ NPT male thread fitting on one end and a 1/4″ NPT female thread fitting on the other end. Fittings are stainless steel.

Handles and Extension Rods for Threaded-Shank Brushes

When you need an extra reach, these extension rods go the distance. For use with the threaded-shank brushes on this page and the previous page. To connect rods, brushes, and handles, match the male or female thread with the opposite thread of the same size. Rods are rigid, unless noted.

Rods with T-Handle and ***T-handles*** have one threaded end and one end with a handle. ***Double-threaded rods*** have one female-threaded end and one male-threaded end for use with brushes, handles, and other rods. Both threads are the same size. ***T-handles*** 7215T24 and T13 will accept the female-threaded end of a brush or rod. T13 comes with a screw. 7215T23 and T25 will accept the male-threaded end of a brush or rod.

Duct and Flue Threaded-Shank Brushes

Round *Square*

Clean dust, soot, and carbon deposits out of chimneys, ducts, and flues. Brushes have galvanized steel stems with 1/4″ NPT male threads. Extension rods and handles are sold separately.

Carbon Steel Bristle Brushes— Double spiral, double stem. *Round brushes* are 4 1/2″ long. Overall length is 7 1/2″. Max. rpm is 1,200. *Square brushes* are 6″ long. Overall length is 9″. Designed for hand use.

Polypropylene Bristle Brushes— Single spiral, double stem. Bristles remove dust better than carbon steel bristles. Brush length is 6″. Overall length is 8 3/4″. Max. rpm is 1,200.

Tampico Bristle Brushes— Single spiral, double stem. Brush length is 4 1/2″. Overall length is 8″. Designed for hand use.

Flexible Extension Rods— Fasten to the brushes listed below. Rods have a 1/4″ NPT male thread fitting on one end and a 1/4″ NPT female thread fitting on the other end.

● Stainless steel stem. ◆ Brush diameter tapers from 1 1/4″ to 3/4″.

Loop-Handle Brush Sets

We've packaged our most popular sizes together for your convenience. All brushes are single spiral, single stem. Choose stainless steel, brass, or nylon bristles.

Tube-Diameter Sets— Include four brushes in 1/8″, 1/4″, 3/8″, and 1/2″ brush diameters. *Type 302/304 stainless steel brush set* has stainless steel stems; *brass* and *nylon brush sets* have galvanized steel stems. Brushes are 1 1/2″ to 2″ long.

Screw Size Sets— You'll get one brush in each of the following screw sizes: 0.060″, 0.086″, 0.112″, 0.138″, 0.164″, 0.190″, 1/4″, 5/16″, 3/8″, 1/2″, and 3/4″. Brushes are 3/4″ to 1 1/2″ long. Stems are stainless steel.

Miniature Sets— *Type 302/304 stainless steel* and *brass sets* include 0.040″, 0.047″, 0.063″, 0.072″, and 0.094″ brush diameters. *Nylon set* includes 0.032″, 0.040″, 0.047″, 0.063″, 0.072″, and 0.094″ brush diameters. Brushes are 1/2″ to 3/4″ long. All have stainless steel stems.

Wire/Bristle Material		Set
Tube-Diameter Sets— *Overall lengths are 8″.*		
Type 302/304 Stainless Steel	7430T64	$11.58
Brass	7430T65	11.58
Nylon	7430T63	10.21
Screw Size Sets— *Overall lengths are 4″ to 6″.*		
Type 302/304 Stainless Steel	7464T53■	39.70
Brass	7464T54■	38.19
Nylon	7464T52■	33.71
Miniature Sets— *Overall lengths are 4″.*		
Type 302/304 Stainless Steel	7396T72	19.29
Brass	7396T73	19.29
Nylon	7396T71	22.89

■ Includes a combination of loop-handle and plain twisted-stem brushes.

For information about bristle materials, see page 2704.

Refrigeration and Plumbing Hand Brushes

Precisely sized for common plumbing and refrigeration applications.

Tube/Fitting Brushes

Brushes are double-spiral double-stem with Type 302 stainless steel bristles, galvanized steel stems, and plastic grips.

Hex-Shank Plumbing Power Brushes

Clean tubes and fittings quickly. The 1/4" hex shank attaches easily to most power drills. Bristles inside the housing and a protruding brush clean the ID and OD of your pipes and fittings at the same time. Bristles are Type 302 stainless steel.

4-Piece Kit— Includes the three brushes shown plus a 1/4" hex quick-change holder.

Specialty Hand Brushes

Reach difficult spots. Brushes have twisted galvanized steel stems.

Domed-Head Brushes with Wire Loop Handles— Also known as bottle brushes, they clean the sides and bottoms of cylinders and holes simultaneously. Bristles are a blend of horsehair and nylon.

Brush Dia.	Brush Lg.	O'all Lg.		1-11	12-Up
2 3/4"	6"	18"	7222T1	$4.75	$3.80
3"	7"	18"	7222T2	7.73	6.18

Tapered Tampico Brush with Wood Handle— Also known as a spoke brush, the tapered design reaches into difficult spots.

Brush Dia. Large End	Small End	Brush Lg.	O'all Lg.		1-11	12-Up
2 1/2"	1 1/4"	9"	14"	7210T14	$6.72	$5.38

Long-Reach Wood Handle Brushes— Also called radiator brushes. The extra long handle reaches into small and awkward spaces.

Bristle Material	Brush Dia.	Brush Lg.	O'all Lg.		1-11	12-Up
Horsehair	2"	5"	30 1/2"	7238T14	$10.14	$7.98
Nylon	2"	5"	30 1/2"	7238T15	9.46	7.45

About Hand Brushes

Commonly called scratch brushes, toothbrush-style brushes, and welders', platers', and finishing brushes, hand brushes have a wide range of applications. Use them for applying liquids, cleaners, paint, and adhesives; for removing rust, solder, paint, dirt, and dust; and for scrubbing, polishing, deburring, weld cleaning, roughening, and metal finishing. Also good for clean room work and static electricity conduction and dissipation.

Most hand brushes have staple-set bristles. Exceptions to this are the hand-laced brushes and the pencil- and paint-brush-style brushes. *Hand-laced brushes* have bristle tufts tied into the brush head so they won't fall out, especially in wet environments. *Pencil-* and *paint-brush-style brushes* have bristles glued or crimped into the brush head.

BRISTLE MATERIALS

Carbon Steel—Use for light to aggressive material removal and finishing soft materials.

Stainless Steel—Resists corrosion better than carbon steel and withstands elevated temperatures. Unlike carbon steel, it does not leave deposits that can cause rust on stainless steel workpieces. Sold in a range of bristle diameters to handle everything from tough cleaning to working on delicate parts.

Brass—Nonsparking and softer than steel and stainless steel. Use for light to medium cleaning, polishing, deburring, material removal, and static reduction.

Bronze—Typically harder, tougher, and stiffer than brass. Resists salts better than brass.

Aluminum—Generally used on aluminum workpieces.

Nylon—The toughest, most durable synthetic material. It has good abrasion resistance for cleaning and scrubbing jobs and works well in wet applications. Nylon has poor to good resistance to dilute acids, good resistance to dilute alkalies, and good to excellent resistance to mild solvents. Maximum temperature is 200° F.

Polypropylene—Popular for wet or dry cleaning. It's nonbrittle, fungus resistant, and very stiff when wet. Has excellent resistance to dilute alkalies and acids, and fair to good resistance to mild solvents. Maximum temperature is 175° F.

Horsehair—Resilient, nonconductive, and durable. Ranges from soft to slightly stiff depending on bristle length. Use for dry polishing and scratch-free cleaning and dusting. Horsehair has poor resistance to dilute alkalies and acids, and poor to fair resistance to mild solvents. Maximum temperature is 300° F.

Goat Hair—Very soft, fine, and nonconductive. A great choice for fine polishing and cleaning delicate parts.

Hog Bristle—The stiffest of our natural material hair-type brushes, hog bristle also provides the best cleaning. It's nonconductive and works well with sticky, crusty materials and viscous fluids. Also known as Chun King or China bristle.

Tampico—A vegetable fiber with high absorbency for low abrasion scrubbing and washing. Use wet or dry. It has poor resistance to dilute acids, fair to good resistance to mild solvents, and good resistance to dilute alkalies. Maximum temperature is 283° F.

Hand Brushes

Hand Brushes

From heavy duty rust, paint, and scale removal to delicate surface cleaning and polishing, these hand brushes get the job done.

A ***Brushes with Curved Wood Handles***—Brushes with fine (0.006″) and natural bristles, known as platers' brushes, are designed for delicate jobs. *V-shape-bristle brushes* have bristles that angle inward to form a very narrow face. Perfect for angles and slots.

B ***Brushes with Arched Handles***—Similar to (A), but with an arched handle (also called a shoe handle). Choose a wood or plastic handle.

C ***Wide-Face Brushes***—Have a wider, more square face than (A) or (B). Choose a wood or plastic handle.

D ***Finger-Guard Brushes***—A plastic wraparound handle protects your hands and fingers from scrapes.

E ***Two-Hand Plane-Style Brush with Plastic Handle***—Allows you to work with two hands for better control and more aggressive brushing.

B

C

D

E

F

G

H

J

Their narrow face widths allow these brushes to fit into hard-to-reach areas. They're great for small workpieces. Use brushes with plastic or metal handles for electronics, clean rooms, and other applications where wood fibers or splinters might harm your work.

Curved and ***bent handles*** prevent scraped knuckles. ***Hand-laced*** brushes hold bristles securely so they won't fall out, making them ideal for wet applications.

D Hand-Laced Brushes with Bent Wood Handles— A severe bend in the handle enables you to brush at a different angle.

G Hand-Laced Titanium Brushes with Curved Acetal Handles— Crimped titanium bristles are immune to corrosion from salt water and marine atmospheres, and are resistant to acids, alkalies, water, and chemicals. Brushes are nonconductive and can be sterilized.

H Two-in-One Brushes with Polypropylene Handles— Have two brush faces with different bristle materials for all kinds of parts-cleaning tasks.

J Brushes with Wood Handles— An excellent brush for dusting and scrubbing. Widely used on circuit boards.

■ Stainless steel bristles (SS) are Type 302/304. ♦ Handle is straight. ★ Bristles on second brush face are 0.016″ dia. nylon.

(Continued on following page)

For information about hand brushes and bristle materials, see page 2709.

Small Size Hand Brushes *(Continued from previous page)*

K ***Flat Brushes with Steel Handles—*** Coarse bristles make these brushes perfect for brushing hot metal and for removing rust, paint, dirt, and weld flux. Bristles are crimped into the handle.

L ***Round Clean Room Brushes with Acetal Handles—*** Nylon bristles are held in the brush with a high-temperature epoxy. Bristles won't fall out even when sterilized in an autoclave. Max. temperature is 180° F.

M ***Pencil-Style Oval Brushes with Stainless Steel Handles—*** Handles are Type 302/304 stainless steel. *Nylon* brushes are great for wet cleaning and scrubbing jobs. *Horsehair, hog bristle,* and *goat hair* brushes can be used in wet and dry static-sensitive environments.

N&P ***Flat and Angled-Head Brushes with Acetal Handles—*** The best choice for tight spots. Bristles are clamped into the end of the brush.

Rigid-Bristle Hand Brushes

Very stiff, coarse bristles make these brushes perfect for heavy duty jobs.

Styles Q&S remove paint, rust, and scale. ***Style R*** works well on rust and scale, but is not recommended for paint removal. Has an arched handle for a comfortable grip. ***Style S*** has a 20 1/2″ long, tubular metal handle for reaching tight spots.

Applicator Brushes

A

B

C&H

D

E

F

G

J

Small size makes these brushes ideal for applying flux and adhesives to small parts and pipes. Also used for dusting, cleaning, and work involving heat.

A-C ***Horsehair Brushes with Steel Handles***—Thick horsehair bristles provide excellent resistance to deterioration from heat and cleaning solvents. *Style A* is our most popular style. So economical, you can throw them away after each use. Also known as acid brushes. *Styles B* and *C* are good for use with oil. *Style B* is more densely filled than *Style A* and has a seamless handle. *Style C* has bristles on both ends.

D ***Horsehair Brush with Wood Handle***—Also known as a dope brush. Same as the horsehair brushes above, except with a wood handle.

E ***Nylon Brushes with Acetal Handles***—Resist most oils and non-acidic chemicals. Bristles are white nylon.

F ***Fiberglass Brush with Tin Handle***—More resistant to heat than horsehair. Bristles extend the entire length of the hollow handle and can be pulled out to any bristle length. Trim bristles as they wear.

G&H ***Hog Bristle Brushes with Zinc-Plated Steel Handles***—Made of the stiffest natural material, these brushes are good for sticky, crusty materials and viscous fluids. *Style G* has a seamless handle. *Style H* has bristles on both ends.

J ***Tampico Brushes with Wood Handles***—Ferrule is metal.

Parts-Washing Brushes

K

L, M&P

N

Q

R

S

T

Designed for use with liquid parts cleaning solutions. For parts washers, see pages 2719-2720.

K-P ***Standard Brushes***

(K) Steel Brush—Equally good for cleaning parts and machines. Bristles are crimped. Ferrule is polypropylene.

(L&M) Polypropylene Brushes—There's less dipping and more cleaning with these semi-blunt brushes because the crimped bristles hold fluid better. *Style M* has an extra-long handle for extended reach.

(N) Hog Bristle Brush—Has soft bristles and semi-blunt point for cleaning delicate parts.

(P) Tampico Brush—Has a semi-blunt tip for general purpose cleaning.

Q-T ***Flow-Through Brushes***

(Q) Straight Brush—Bristles are crimped. Handle is hollow, made of plastic, and has a slip-on connection to fit any 1/2″ dia. parts-washer spigot. Furnished with 12″ of clear plastic tubing.

(R) Small Straight Brushes—About the size of a ball-point pen. Handle is 3/8″ dia. and can be inserted into a rubber parts washing hose. Brushes have micro-sized nylon tubes intermingled with the bristles that allow liquid to flow through the brush.

(S&T) Comfort-Grip Brushes—A push-button control lets you regulate the flow of cleaning fluid. Handle has a nonslip grip and a special design to reduce wrist fatigue. Metal parts are stainless steel and brass. Furnished with a 2-ft. nitrile rubber hose for connecting to a 1/2″-19/32″ OD fluid supply connection.

For abrasive blasting media, see page 2717.

About Abrasive Blasting

Effective for cleaning, finishing, and deburring most parts.

Suction-Feed Blasters— Use compressed air to create suction that draws or siphons blasting media into a blast gun and propels it onto the part at high speed. They allow continuous blasting without stopping for blasting media refills.

Pressure-Feed Blasters— Use compressed air and a pressurized tank to push the blasting media through the nozzle of the gun. It's faster and more efficient than suction feed. Ideal for heavier abrasive, blind holes, and deep pockets. However, units must be stopped periodically to allow the pressure tank to recharge.

Abrasive Blasting Cabinets with Dust Collector

Our most popular blasting cabinets, these suction-feed blasting units include a dust collector for removing dust from inside the cabinet. Use them with most types of dry abrasive blasting media. Not recommended for silica sand, steel shot and grit, baking soda, and plastic grit.

Cabinets have a foot-operated blast gun with a tungsten carbide nozzle and air jet. They are 14- and 11-ga. welded steel with an easy-to-change viewing window, a steel-screen work table, exterior fluorescent lighting, neoprene work gloves, and a bottom hopper door for media removal. A safety switch shuts off airflow when the cabinet door is opened. Guarded air inlets and gasketing on the doors, window, and flip-top opening keep abrasives inside the cabinet. Furnished with a blast hose, 3/8″ ID air hose, air regulator and gauge, and 7-ft. power cord with three-prong plug. Air inlet: 3/8″ NPT female. Air pressure: 10-120 psi. Air volume @ 80 psi: 25 cfm (12 cfm for 3283K5). Operate on 110 VAC, 60 Hz.

Top- and Side-Opening Cabinets— Have top-opening and side-access doors; 3283K9 has two side-opening doors.

Flip-Top Cabinets with Side Door— Top opens 85°-90° to accommodate large parts and has a lift-assistance mechanism for effortless opening and closing. All cabinets have a side-access door.

Accessories— *Turntable* rotates manually for easy access to parts. *Gun mount bracket* allows hands-free gun operation.

Bench-Top Abrasive Blasting Cabinets

These suction-feed blasting cabinets fit on your work bench and have a front opening door, a hopper door for removing media, a steel-screen work table, an easy-to-change window, exterior fluorescent lighting, and neoprene work gloves. Include a blast hose, 3/8″ ID air hose, and 7-ft. power cord with three-prong plug. Both are made of 14- and 11-ga. welded steel and recirculate blasting media. Use with most types of media. Not recommended for steel shot or grit, baking soda, plastic grit, and silica sand. Air pressure: 10-120 psi. Air volume @ 80 psi: 12 cfm. Operate on 110 VAC, 60 Hz.

Standard Cabinet— Has a trigger-operated blast gun with 1/4″ ID ceramic nozzle and 1/8″ ID steel air jet, and an adjustable steel stand (adjusts on 2″ centers). For dust collection, hook up a standard shop vacuum to the cabinet's 2½″ dia. intake port or use the optional shop-vacuum style dust collector (sold separately below).

Deluxe Cabinet— Includes a 55 cfm shop-vacuum style dust collector that removes dust from the interior of the cabinet. Also has a foot-operated blast gun with 1/4″ ID tungsten carbide nozzle and 1/8″ ID tungsten carbide air jet, an air regulator and gauge, and a welded-steel stand. A safety switch shuts off airflow when the cabinet door is opened. Includes 10 lbs. of glass bead media (mesh size 70-140). Air inlet: 3/8″ NPT female.

For information about abrasive blasting, see page 2713. For abrasive blasting media, see page 2717.

Dust Collector/Separator for Abrasive Blasting Cabinets

Prolong media life, increase blasting effectiveness, and improve visibility within your suction-feed blasting cabinet by extracting dust from your blasting media. This collector/separator has a two-stage filter to remove up to 99% of the dust, while a separator collects the reusable media. Works with all blasting media grits. A 4″ cleanout drain allows for easy removal of debris and spent media. Airflow is adjustable. Furnished with a 1½″ Dia.×6′ Lg. hose assembly that includes a 2¼″ cuff, 2½″ OD fitting for larger cabinets, and 2″ collar for smaller cabinets. Powered by a 1.3-hp motor.

Use collector/separator with any stationary abrasive dry-blasting cabinet that has a 2¼″ or 2½″ dia. intake port and an interior size up to 40″ Ht.×40″ Wd.×30″ Dp. Made of one-piece, molded, corrosion-resistant polyethylene. Operates on 120 VAC, 60 Hz and includes 9-ft. power cord with three-prong plug. Overall size is 47″ Ht.×15″ Dia.

Micro-Blast Abrasive Blasters

A

B

Perfect for cleaning small, delicate, precision parts that could be damaged by larger blasters. These pressure-feed units have an air filter/regulator, foot-operated on/off power control, and 64-oz. capacity tank. Use with all types of media. Air inlet: ¼″ quick-disconnect and barbed fittings. Air pressure: 0-100 psi. Air volume @ 100 psi: 1.75 cfm.

(A) Cabinet Blaster— Includes an impact-resistant resin cabinet, two tanks for 0.002″-0.004″ media, two different media hose sizes, 0.032″ and 0.048″ nozzles with sapphire crystal orifices, fluorescent illuminated viewing area, and nitrile work gloves. Operates on 115 VAC, 60 Hz and has a 6-ft. power cord with three-prong plug.

(B) Portable Blaster— Hooks up to any remote air source. Has a single tank and 0.048″ nozzle with sapphire crystal orifice.

Optional Accessories— *Dust collector* stands up to aluminum-oxide dust. Works with cabinet and portable blasters. Has a foot-operated on/off power control. Connects to blaster with a 2½″ OD hose (included) that expands up to 6 feet long. Operates on 110 VAC/VDC, 60 Hz and includes 6-ft. power cord with three-prong plug. Overall size is 24″ Ht.×20″ Wd.×11″ Dp. *Magnifiers* can be placed over the blaster's window to view small parts. 3″×5″ magnifier has suction cups for easy placement and removal. Use both with cabinet blaster.

Portable Abrasive Blasters

C D

Also known as suction-feed or siphon sandblasters, these blasters are less expensive than high-velocity pressure-feed units, but operate at slower speeds. They have a 28-ga. steel tank, blast hose (⅜″ Dia.×7-ft. Lg. for Style C; ⅜″ Dia.×10-ft. Lg. for Style D), gun, three steel nozzles (13⁄64″, ¼″, and 5⁄16″ dia.), three air jets (5⁄64″, ⅛″, and 5⁄32″ dia.), hood, and goggles. Air inlet: ¼″ NPT female. Air pressure: 80-125 psi. Air volume @ 80 psi: 7 cfm for 13⁄64″ nozzle, 15 cfm for ¼″ nozzle, and 20 cfm for 5⁄16″ nozzle. Use with all types of blasting media; not recommended for baking soda. For air-supplied hoods, see page 1826.

Style C is free standing with a 50-lb. capacity and a 40-minute blast time. Overall size is 9½″ Dia.×18″ Ht.

3425K11 ..... $137.86

Style D has a two-wheel stand for portability. It has a 90-lb. capacity and a 70- to 80-minute blast time. Overall size is 11¼″ Dia.×28″ Ht.

3425K12 ..... $176.64

Replacement ceramic and ***steel nozzles*** fit both blasters, replacing included steel nozzles. ***Replacement air jets*** also fit both blasters.

5⁄32″	3425K59	4.62		

High-Velocity Portable Abrasive Blasters

3268K12

Faster and more aggressive than suction-feed blasters, these units (also known as pressure-feed blasters) blast media at higher velocities to maximize production. All have an ASME certified tank, adjustable abrasive-flow valve, pressure relief valves that meet OSHA requirements, pressure gauge, welded steel frame, rubber tires, blast hose, and blast nozzles (see table below). Air pressure is 80-125 psi. Use them with all types of blasting media; however, not recommended for baking soda.

Blasters with 65-lb. to 250-lb. tank capacities also have a manual pull-up tank closure and soft blast hood with protective cap and rear breather vents. The 600-lb. capacity blaster has an automatic tank closure, heavy canvas blast hood with protective cap and rear breather vents, pressure choke valve, and dual remote blast media valves. For replacement ceramic blast nozzles, see page 2716. For air-supplied hoods, see page 1826.

Blasters with Nozzle Shutoff— Releasing the nozzle control lever shuts off the abrasive flow at the nozzle, while the abrasive hose and tank remain pressurized.

Blasters with Nozzle and Tank Shutoff— Releasing the nozzle control lever shuts off the abrasive flow at the nozzle and the tank and relieves the hose of pressure for added safety.

Replacement Lens for Soft Blast Hood 3268K34 3.76

● Includes a moisture separator for improved media flow.

For information about abrasive blasting, see page 2713. For abrasive blasting media, see page 2717.

Portable Baking Soda Abrasive Blaster

Tough enough to remove difficult soils yet this blaster won't damage surfaces. It removes baked-on carbon, paint, grease, grime, and surface rust and other oxides and can be rinsed with water to remove media residue. Blast time is approximately 30 minutes. Blaster works with compressed air from 40 to 90 psi and has a quick-connect air inlet and pressure relief valve up to 125 psi. Media container and stand are steel. Includes a 5-ft. hose with 5/32″ dia. ceramic nozzle, a water filter to capture moisture in air lines, and a carrying handle.

No-Mess Portable Abrasive Spot Blaster

Convenient and efficient, this blaster handles small, precise blasting jobs without a big mess. To operate, push the rubber bellows-style nozzle against the work surface, the abrasive media blasts surface and removes contaminants and is then vacuumed back in to the blaster. Usable media is then separated from dust and debris and recycled. Works with any type of abrasive media.

This high capacity, heavy duty air/electric-operated blaster has an integrated vacuum and filtration system for 99% dust-free work. A 4″ cleanout port allows easy media removal. Includes a gun with 9/32″ ID ceramic nozzle and rubber bellows, two brushes (one for irregular surfaces and one for inside 90° angles), 1 1/2″ Dia.× 20-ft. Lg. blast hose, and 20-ft. power cord with three-prong plug. It has a polyethylene tank and a tubular steel frame with two 8″ wheels. Motor is 1.3 hp and has a silencer that reduces noise below OSHA requirements. Operates on 120 VAC, 60 Hz, 9 amps. Recommended air pressure: 75-150 psi.

Hand-Held Abrasive Blasters

Excellent for small blasting jobs such as cleaning, etching glass, and removing rust and paint. All blasters include a media container.

Blasters— Both are gravity feed. *Standard* blaster is trigger-operated. Made of impact-resistant ABS plastic. It has a 3/16″ ID ceramic nozzle and 26-oz. polypropylene media container. Air volume @ 125 psi: 12 cfm. Ideal with black beauty grit and may be used with other abrasive media; not recommended for baking soda. *Optional spot blasting kit* includes four rubber cones that conform to various workpiece contours and a collection bag that recovers reusable media. *Pencil-grip* blaster is push-button operated. Designed for precision work on small, delicate parts. Made of plated brass with a plastic handle, it includes a 2-oz. aluminum media container, 0.023″ ID stainless steel nozzle, moisture trap, filter respirator mask, hanger, air hose, and 6 oz. of aluminum oxide media (220 grit). Air volume @ 40 psi: 0.5-1.0 cfm. Use with aluminum oxide media (below) or other abrasive media including baking soda.

Combination Blaster and Sprayers— These lever-operated guns are for blasting as well as for spraying liquids. Operate on a suction feed and are die cast zinc with a steel air jet and a 32-oz. painted steel media container. Air consumption: 6.65 cfm @ 80 psi. Choose 3/16″ ID ceramic or steel nozzle. Can be used with all types of abrasive media including baking soda. Not rated for air volume.

Abrasive Blasting Guns

Whether you use them inside a blasting cabinet or outdoors on a job site, these suction-feed guns deliver a consistent, uniform spray pattern for quick surface cleaning and finishing. Guns are cast aluminum and include an air jet to increase air velocity for better suction of media.

Standard gun has a full-length trigger and a 1/4″ brass rod valve stem for durability. A 5/16″ nozzle and 5/32″ air jet (both hardened steel) are included. Air inlet: 1/4″ NPT female. Air pressure: 80-100 psi. Air volume @ 90 psi: 6 cfm for a 3/16″ ID nozzle; 18 cfm for a 5/16″ ID nozzle. Recommended hose size: 3/8″. *Gun kit* comes with a blasting gun, 3/16″ and 5/16″ hardened-steel nozzles, 3/32″ and 5/32″ air jets, blast hose, and 14″ long zinc-plated steel siphon tube for drawing media from a bucket or other container. ***Optional nozzles for standard gun*** are extra thick for long life. *Ceramic* and *tungsten carbide nozzles* are jacketed to prevent breakage.

Heavy duty gun has a built-in 5/8″ OD inlet tube that connects to a suction hose (not included). Includes a tungsten carbide 3/4″ OD×7/16″ ID nozzle and 7/32″ air jet. Air inlet: 1/4″ NPT female. Air pressure: 70-100 psi. Air volume @ 90 psi: 45 cfm.

Standard Gun

Gun	3444K11	$71.73
Gun Kit with Siphon Tube	3444K71	82.50
Replacement Nozzle Kit	3444K66 ♦	36.64
Replacement 3/32″ Air Jet	3444K51	11.00
Replacement 5/32″ Air Jet	3444K52	11.00
Replacement Air Jet Seal	3444K67	2.93

♦ Includes nozzle holder, 5/16″ steel nozzle, and 5/32″ air jet.

Optional Nozzles for Standard Gun

Hardened Steel (3/16″ ID)	3444K21	$16.90
Hardened Steel (5/16″ ID)	3444K22	16.90
Ceramic (3/16″ ID)	3444K31	49.74
Ceramic (5/16″ ID)	3444K32	49.74
Tungsten Carbide (3/16″ ID)	3444K41	60.27
Tungsten Carbide (5/16″ ID)	3444K42	60.27

Heavy Duty Gun

Gun	3444K14	$136.73
Replacement 7/16″ ID Nozzle	3444K27	60.91
Replacement 7/32″ Air Jet	3444K28	43.63
5/16″ ID Nozzle (18 cfm @ 90 psi)	3444K35★	65.91
5/32″ Air Jet (18 cfm @ 90 psi)	3444K36★	43.63

★ 3444K35 and 3444K36 must be used together.

For information about abrasive blasting, see page 2713.

Mini Abrasive Blaster Kits

Deluxe Kit

Easily and effectively blast the smallest parts. Kits remove old paint and rust, as well as etch wood and glass. Connect blasters to an air line with the included air hose. Use with an abrasive grit of 220 or finer; aluminum oxide is recommended. Air pressure: 50-90 psi. Air consumption @ 30 psi: 0.25 cfm.

Standard kit includes abrasive gun with nozzle, 4 oz. suction-feed abrasive jar, 8-ft. hose with 1/4″ NPT female connection, mask, and 12 oz. of 220 grit aluminum oxide. ***Deluxe kit*** includes everything in the standard kit, plus a 250 mL can of air propellant and a propellant regulator. Use with included can of air propellant or compressed air.

Standard Kit	9558T11	$45.36
Deluxe Kit	9558T12	53.46
Replacement Nozzle	9558T91	5.36

Ceramic and Carbide Abrasive Blasting Nozzles

Tapered Ceramic

Straight Ceramic and Tungsten Carbide

Venturi Carbide

Tapered and ***straight ceramic nozzles*** fit most abrasive blasters. Great for light touch-up jobs and blasting small areas. Nozzle ID is maintained for up to 4 hours of continuous use. ***Straight tungsten carbide nozzles*** are ideal for spot blasting from a distance of 12″ or less. Yield a narrow pattern with little overblast. ***Venturi carbide nozzles*** are designed to enhance efficiency and handle larger areas than straight nozzles. Rated for up to 40 hours of continuous use (with aluminum oxide), these nozzles deliver a uniform blast pattern, reduce grit consumption, and boost productivity. They have a brass jacket and carbide liner. Threads are brass 1 1/4″ NPS male.

About Abrasive Blasting Media

We have media for all blasting needs. Shape and hardness are two factors to consider when purchasing media. Round particles leave a smooth finish, while sharp particles leave an etched or matte finish. The harder the abrasive, the deeper it penetrates and the faster it works. Media does not contain free silica, unless noted. Most abrasive media is graded by mesh size or grit.

Mesh size refers to the number of holes in a 1″ square screen. As the mesh number gets larger, the number of holes per inch increases, the size of each individual hole decreases, and the media becomes finer. For more information on mesh size, see page 409. ***Grit*** numbers refer to the coarseness; the lower the number the coarser the grit.

For information about abrasive blasting, see page 2713. For ultrasonic cleaning solutions, see page 2718.

Abrasive Blasting Media

Glass Bead—Spherical beads remove carbon and surface residue. This media is inert and leaves no residue.

Ground Glass—An alternative to sand and grit; leaves a rough surface.

Glass/Aluminum Oxide Grit—Mixture of glass bead and aluminum oxide removes tough corrosion in applications where 100% aluminum oxide is too aggressive. Contains less than 1% of free silica.

Aluminum Oxide Grit—Sharp, hard, and durable, it prepares surfaces for recoating. Use to frost glass, letter stone, and remove contaminants.

Black Beauty Grit—The best alternative to silica sand, it's also known as black diamond and black blast. Contains less than 0.1% free silica. Grit is inert and moisture free.

Silicon Carbide Grit—Quickly cleans granite, ceramics, silicon, quartz, cemented carbides, and other tough materials.

Steel Grit—Leaves a textured surface to enhance the bonding ability of paint and other coatings.

Steel Shot—Generates a high impact force to clean and peen heavy forgings and remove heat-treated scale. For steel and other cast metals.

Cast Stainless Steel Shot—Outlasts aluminum oxide, glass beads, and black beauty grit by a ratio of 1,000 to 1. Use to descale nonferrous metals.

Garnet Grit—More aggressive than other blasting media and cuts faster while producing less dust.

Plastic Grit—Easily removes coatings and build-up without marring and warping base material. Must be used with pressure feed blasting equipment; use with 3268K on page 2714.

Walnut Shells—These soft-grit shells clean, polish, and debur soft metals, fiberglass, plastic, wood, and stone.

Corn Cob—Cleans metal, wood, fiberglass, plastic, masonry, and electric insulators. Won't frost glass, pit aluminum, or damage surfaces.

Baking Soda—Scour almost any material. It can be used "wet" with water for removing grease. Baking soda is environmentally friendly.

About Ultrasonic Cleaning

Ultrasonic cleaners use sound waves to clean parts thoroughly, through a process called ultrasonic cavitation. During cavitation, sound waves travel through the cleaning solution causing millions of microscopic bubbles to form and then violently collapse. This creates scrubbing action that removes dirt from small crevices and between tightly spaced parts. Ultrasonic cleaning is powerful enough to remove heavy oils, greases, coolants, buffing compounds, rust, burned carbon, waxes, and proteins. It also penetrates to remove flux from circuit boards, yet is gentle enough to clean the tiniest precision parts.

Note: Parts should be placed in a basket or pan (not directly on the bottom of the cleaning tank) to prevent transducer damage.

Fast-Clean Ultrasonic Cleaners

These ultrasonic cleaners simultaneously produce multiple frequencies (high and low) for faster, more efficient cleaning than single-frequency units. Cleaning results are completely uniform at every tank location. An automatic degas function removes dissolved gases from the solution for increased cleaning effectiveness and allows use within three minutes of start-up. Use for metallic and ceramic applications; not for use with plastics. Cleaners are rated for continuous use. Never run cleaners dry (without solution) or damage could occur. ***80/40 kHz cleaners*** are best for removing normal industrial contaminants and for cleaning small, intricate parts. Choose ***40/25 kHz cleaners*** for removing stubborn contaminants such as rust and baked-on carbon soils. Baskets are sold separately below.

Cleaners include a stainless steel, pressure-tested tank and an ultrasonic generator. Tanks have a ¾″ dia. drain and a stainless steel cover. Ultrasonic generators are housed in a separate stainless steel cabinet and are connected to the tank by a 6-ft. radio frequency shielded cable. Cleaners have a digital timer that's programmable from 0.1 seconds to 999 hours. They also have two digital displays. One display shows the amount of time set for a specific cleaning cycle and the other display shows a countdown of the cleaning cycle. They also have a built-in heater with thermostat control and a digital display of the temperature. Heating temperature range is from room temperature to 180° F. Cleaners operate on 120 VAC, 50/60 Hz and include a 9-ft. power cord with three-prong plug. They will not operate if connected to a GFCI (ground fault circuit interrupter) circuit; cleaners generate signals which artificially trigger these sensitive devices.

Wire baskets are stainless steel with a 0.035″ wire diameter and ½″ opening size. Include handle.

Ultrasonic Cleaners

Cleaner Styles 1-10

Cleaner Styles 11-15

Cleaner Style 16

Wire Basket

Pan with 5/32″ Perforated Bottom

Solid Pan

Solid Pan with Handles

Get a powerful clean from the convenience of your bench top. All include a tank cover (unless noted). Units have an ultrasonic frequency of 40-45 kHz. They operate on 115-120 VAC, 50/60 Hz and have a power cord with three-prong plug. Baskets and pans are sold separately below.

Styles 1-10 have a mechanical timer that can be set for up to 60 minutes. Tank has a steel outer housing that's clad in vinyl to resist scratches and chemicals. All cleaners, except Styles 1 and 6, have a drain. All have a 6-ft. power cord, unless noted. *Styles 6-10* also include a heater for enhanced cleaning ability. The heater has a maximum temperature of 145° F, unless noted. For added safety, a thermostat shuts down the heater if the solution exceeds the maximum temperature.

Styles 11-15 have an easy-to-read LED display that keeps track of the time and temperature in Celsius degrees. They also have electronic touch-pad switches for operating the cleaning, temperature, timer, and degas settings. Degas is a function that removes dissolved gases from the cleaning solution for increased cleaning effectiveness. Units automatically shift from degas to cleaning after five minutes. To save time cleaners automatically reset to the last setting; just reload and start. Tank housing is made of impact-resistant plastic. A digital timer can be set from 1 to 99 minutes. Display shows the amount of time set for a specific cleaning cycle or a countdown of the time the cleaning cycle has run. The heater has a temperature range of 20° to 69° C (68° to 156° F). A built-in temperature sensor prevents overheating. All have a 7-ft. power cord. *Styles 11* and *12* have an indentation on the top drip flange for easy emptying. *Styles 13-15* include a quick-disconnect drain.

Style 16 has a larger tank for use with larger parts. Includes a rear-mounted drain and separate on/off switches for controlling cleaning and heat functions. Heater temperature is nonadjustable and stabilizes at 140° F. It has a 7-ft. power cord and a Radio Frequency Interference (RFI) filter to meet FCC standards. *Cover* is stainless steel and sold separately below.

Ultrasonic Cleaning, Rinsing, and Disinfecting Solutions

Solvent-Free Water-Based (Aqueous) Solutions

These water-based solutions are furnished in a 1-gallon container.

General Purpose Degreaser Concentrate— Removes oil, light grease, and soil from metal, glass, and plastic. It's phosphate-free, nontoxic, noncaustic, nonflammable, and nonabrasive. Solution can be diluted with up to seven parts of water. Maximum temperature is 180° F. Rinse with water.

3175K55 ..... $29.80

Heavy Duty Degreaser Concentrate— Removes the same materials as the solution above as well as baked-on carbon soils. Solution can be diluted with 7 to 15 parts of water. Maximum temperature is 180° F. Aluminum may become discolored at temperatures above 140° F and cleaning times longer than two to three minutes. Rinse with water.

3175K45 ..... $61.02

Water-Based (Semi-Aqueous) Solutions

Designed for easier disposal than petroleum-based cleaners. Solutions consist of water and other naturally derived components, such as terpenes (citrus and pine oil-based components). Furnished in a 1-gallon container.

Alkaline Water-Soluble Concentrate— Removes wax, grease, oil, and buffing and polishing compounds from metal (except aluminum), glass, and plastic. Dilute with up to 10 parts of water. Maximum temperature is 180° F. Rinse with water.

3175K3 ..... $89.58

Water-Based (Semi-Aqueous) Solutions (Cont.)

Heavy Duty Ammoniated Concentrate— Removes soil, lapping compounds, rouge, and heavy grease from most metal and glass. For plastic, we recommend testing the material before use. Solution can be diluted with up to seven parts of water. Do not heat. Rinse with water.

3175K65 ..... $89.58

Ammonia-Free Concentrate— Handles heavy duty cleanup jobs such as removing heavy soils and grease from most metal and plastic. Solution can be diluted with up to seven parts of water. Maximum temperature is 180° F. Rinse with water.

3175K71 ..... $95.33

Petroleum-Based Cleaning and Rinsing Solutions

To prevent rust, these solutions must be used with a rinsing solution to remove residue and contaminants. Furnished in a 1-gallon container.

Ammonia-Free Solution— Use for cleaning all types of metal. It removes gummed oil, grease, oil-soluble cutting oil, asphalt, tar, carbon-based residue, sulfides, wax, flux, and fingerprints. Do not heat. Rinse with the rinsing solution sold below.

3175K16 ..... $45.62

Rinsing Solution— Dissolves any residue that's left behind from cleaning solutions. This solution is a blend of petroleum-based materials and contains no chlorinated solvents or other harmful ingredients. For plastic, we recommend testing the material before use. Do not heat.

3175K22 ..... $41.20

For information about ultrasonic cleaning, see page 2717. For parts-washing brushes, see page 2712.

Small Parts Ultrasonic Cleaners

Perfect for small parts, these cleaners combine power with quiet operation. With more than twice the capacity Style 2 is the perfect choice when you need more space. Tank and cover are stainless steel (unless noted). Furnished with a basket and a 6-ft. power cord with three-prong plug (unless noted). Operate on 117 VAC, 50/60 Hz.

Replacement Baskets— 32695K41 is made of stainless steel with 0.028″ wire diameter and 0.222″ opening size. 32695K48 is made of perforated ABS plastic with 1/4″ × 3/16″ opening size.

	Tank Cap., oz.	Inside Tank Size, Ht. × Wd. × Dp.	Frequency	Watts	Cleaners		Replacement Basket Inside Dimensions (A)	(B)	(C)	(D)	(E)	Cap., lbs.

★ Power cord is 5 ft. long with a two-prong plug. Cover is plastic with a clear plastic viewing window.

Tub- and Drum-Style Parts Washers

3&4 Washers for Solvent-Based Cleaning Solutions— Use with solvent-based (mineral spirit) cleaning solutions; do not use with other solvents such as gasoline, kerosene, or chlorinated solvents. Washers are made of high strength 16-ga. steel (unless noted) with a durable, corrosion-resistant, powder-coated finish. All include a fusible safety link that closes the cover at 165° F in the event of a fire; safety link is UL listed.

Washers have a thermal-overload-protected, self-priming pump that operates on 115 VAC, 60 Hz, single phase. Furnished with a 7-ft. power cord with three-prong plug.

(3) Tub-style washer is for use with solvents having a flash point greater than 100° F. It functions as a soak tank as well as a parts washer. To clean parts, either soak them in the tub or scrub them manually under the flexible metal hose. Unit includes a tank, steel floor stand with shelf, flexible metal hose, pump, screened strainer filter pad for removing sediment and larger particles, removable inside shelf, and 3/4″ drain with plug.

(4) Drum-style washers are for use with solvents having a flash point greater than 140° F. Designed for washing parts, not soaking them. Wash parts manually under the constant flow of solvent as it is pumped through the flexible metal hose. Cleaning solvent is stored inside the drum, so these washers have less solvent evaporation and fewer fumes than tub-style washers. Both include a tank, drum, pump, flexible metal hose, strainer basket for removing sediment and larger particles, and 3 1/2″ drain.

5&6 Washers for Water-Based Cleaning Solutions— Use only nonflammable, noncombustible water-based cleaning solutions; do not use solvent-based solvents such as gasoline, alcohol, or mineral spirits. Tough polyethylene construction means washers won't corrode. They have a triple-action filtration system (stainless steel strainer, filter basket, and replaceable filter cartridge) that prolongs the cleaning fluid life, while the large tank capacity makes fluid changes less frequent.

Cleaning fluid is pumped through the flow-through cleaning brush or the flexible stay-put hose by a noncorrosive submersible pump. Cleaners have a 1.4 kW heater with thermostat. For added safety, the heater and pump automatically shut down when fluid levels get low. In addition, the washer has a ground fault circuit interrupter and a fusible safety link that automatically closes the cover at 165° F in case of a fire. GFCI device is UL listed and CSA certified.

Pump and heater have a pilot light. Cover has a stainless steel hinge and a gas spring for easy lifting. Operate on a 115 VAC, 60 Hz, single phase motor. Furnished with an 8-ft. power cord with three-prong plug.

(5) Tub-style washer is for washing and soaking parts. Includes a stainless steel parts shelf. Maximum temperature is 120° F.

(6) Drum-style washer stores the cleaning solution inside the drum, so there are fewer fumes and less solution evaporation than the tub-style washer. Designed for washing parts, not soaking them. Maximum temperature is 110° F.

▲ Made of 18-ga. steel.

Immersible Ultrasonic Transducer

Turn your tank into an efficient ultrasonic cleaning system. This system consists of an immersible ultrasonic transducer and a UL listed ultrasonic generator.

Tanks up to 100 gallons require one transducer for every 15 to 20 gallons of liquid. Transducer has a heavy-gauge Type 316 stainless steel housing that resists corrosion from solvents, detergents, and alkalies; and a 36″ watertight, flexible, stainless steel feed with 10-ft. coaxial cable extension. It operates continuously at solvent temperatures up to 220° F. Size is 18″ Lg. × 6 1/2″ Wd. × 3 1/2″ Ht.

Generator features automatic tuning, is fan cooled, and requires 120 VAC, 50/60 Hz, single phase. Furnished with a cord and grounded plug. Output is 25 kHz, 600 watts.

3182K1 ..... $3,965.65

For parts-washing brushes, see page 2712.

Heavy Duty Tub-Style Parts Washers

16-42 gal.

These washers offer three tools for cleaning that can be used individually or simultaneously: a soaking tub with fluid agitator, a pistol-grip nozzle, and a flexible metal hose. The soaking tub with fluid agitator uses a pump and jet manifold to constantly move cleaning solution around parts. This process of constant agitation loosens dirt as the parts soak. The pistol-grip nozzle with neoprene hose lets you adjust the solvent flow from a light spray to a solid jet stream for effective manual cleaning. The flexible metal hose permits you to wash parts manually with your hands under the constant flow of solvent.

All washers use solvent-based cleaning solution with a flash point above 104° F. Do not use alcohol, gasoline, carburetor cleaners, metal strippers, or chlorinated solutions. They're made of 16- and 14-ga. steel and have full width legs; 16- to 42-gal. capacity unit includes casters. They have a powerful 1/3 hp centrifugal pump that operates on 115 VAC, 50/60 Hz, single phase. A fusible safety link closes the cover at 165° F in the event of a fire. All washers include a selector valve for choosing your cleaning method, a washable solvent filter screen, two bi-level work shelves, a drain plug, an on/off signal light, an on/off switch, and a 6-ft. power cord with three-prong plug except for 3187K6, which has an 8-ft. power cord with three-prong plug.

Soak-and-Scrub Tub-Style Parts Washers

With these versatile washers, you can either soak parts in the tub or scrub them under a flexible metal hose. Use with solvent-based solutions with a flash point above 105° F. Do not use with gasoline, acetone, alcohol, or lacquer thinners. A pump continuously recirculates fluid through a dual-element sludge collector and foam filter that traps particles and extends the life of the cleaning solution. A removable sloped metal shelf holds parts above the fluid.

Tank is made of 16-ga. steel and has a ¾″ dia. bottom drain. Washers have a fusible safety link that shuts the cover automatically at 165° F in the event of a fire. Electrical components are UL listed. The ***1/50-hp, 115 VAC*** washer includes a 6-ft. power cord with three-prong plug. The ***1/25-hp, 230 VAC*** washer includes a 6-ft. power cord without plug. It requires a NEMA style 6-15 or other compatible plug. See page 787 for plugs.

Dip, Soak, and Rinse Tubs

Single-Compartment Standard Tub

Roomy tubs make it easy to dip, soak, and rinse parts using solvent-based solutions.

Standard Tubs— Press the foot pedal to open the cover. An adjustable-rate air cylinder keeps the cover from slamming shut when the foot pedal is released. Made of 18-ga. steel, tubs have a corrosion-resistant coating and powder-coated finish for long life. Drain plug is ¾″ dia. All are FM approved. *Double-compartment standard tubs* let you clean parts in one chamber and rinse them in the other. Each chamber has its own drain plug.

Single-Compartment Extra-Deep Tub— Made of 16-ga. steel. A fusible safety link shuts the cover at 165° F in the event of a fire. Drain plug is 2″ dia. Includes an adjustable basket rack that you can set above or below liquid level.

Parts-Washing Cans

Safety Can with Perforated Drain Pan

Bench Can

Save space and cleaning solution with these compact cans. The perfect size for cleaning small parts, they also have a hinged cover to minimize evaporation. Made of steel, units have a corrosion-resistant coating and powder-coated finish for long life.

Safety Dip-and-Wash Cans— In the event of a fire, the fusible safety link on these cans closes the cover at 165° F. All are UL listed and FM approved.

Bench Cans— Simple to use. Just place parts on the spring-loaded, perforated drain plate; press plate down to submerge parts; agitate to clean; and release to the drain position. The drain plate also acts as a flame arrester in the event of a fire. FM approved.

Parts-Washing Solutions

Not recommended for use in cabinet spray washers or for pressure-spraying.

Water-Based (Aqueous) Solutions— These alkaline solutions wash away both organic soils (including grease, oil, and soft carbon) and inorganic soils (such as epoxy, hard-water residue, corrosion, oxides, paint, plating salts, and rust). For faster cleaning action, heat cleaners up to 180° F. Rinse with water.

Dilute *general purpose formula* with four to nine parts of water. These products are compliant under all state VOC rules in effect on January 1, 2011, except in the Los Angeles area.

Nonferrous metals formula is formulated for aluminum and other nonferrous metals. Mix three to eight ounces of this powder per gallon of water.

Solvent-Based Solutions— These solutions remove grease, motor oil, cutting oil, water-soluble oil, soft gummy deposits, and buffing and lapping compounds from metal, plastic, and painted surfaces. They have a mild odor and contain no chlorinated solvents. These products are compliant under all state VOC rules in effect on January 1, 2011, except in California. ***Caution:*** Do not heat. Use only at room temperature.

Solvent-plus-lanolin formula contains lanolin to reduce skin irritation and chapping. Leaves a corrosion-resistant film on parts. Nitrile gloves should be worn for prolonged use. Flash point is 105° F.

High-flash-point lanolin formula is for when local regulations require a higher flash point. It has a flash point of 141° F.

Dipping Racks

Create your own dipping racks for painting, plating, cleaning, and drying. Select the length of frame you need, then choose crossbars and hooks to install on the frame. Crossbars have pegs that fit into holes on the frame; hooks lock securely into the crossbar so they won't fall out. Frames, crossbars, and hooks are steel. Hooks are 0.062″ dia. Frames are U-shaped and have one top center-mount support hook for hanging. Hanging parts only touch at one point. *Crossbars with holes for hooks* have holes on 1¼″ centers. *Crossbars with welded hooks* have permanently mounted 0.091″ dia. Type 304 stainless steel hooks.

Hook for Tubing

About Wire Cloth Baskets

Stainless steel and carbon steel are two of the most popular metals used to make wire cloth baskets. ***Stainless steel*** offers superior corrosion resistance. *Type 304 stainless steel* is the most common. It has a melting point of 2600° F and a maximum temperature for continuous service of 1450° F. *Type 316 stainless steel* offers additional resistance to corrosion from acids and salt water. It has a melting point of 2500° F and a maximum temperature for continuous service of 1500° F. ***Carbon steel*** offers high tensile strength and durability at a low cost; use it for applications where resistance to abrasion and corrosion are less important.

Opening size refers to the size of the clear space between adjacent wires.

Wire diameter indicates the thickness of the wire.

Stainless Steel Baskets for Small Parts

These miniature baskets are perfect for cleaning and storing small parts. They're constructed of corrosion-resistant Type 316 stainless steel and are electropolished and buffed to ensure a smooth and shiny finish that won't scratch equipment.

Round Baskets— Use with bench-top ultrasonic cleaners and for holding parts in beakers. Baskets have a swinging-loop handle that is approximately 3″ high. They have a 0.014″ wire dia. and a 0.027″ opening size. Outside diameter is 0.28″ larger than inside diameter. Optional *latching lids* keep materials contained.

Rectangular Baskets— Use with small ultrasonic cleaners and parts washers. Baskets stack for easy storage. Choose baskets with a nonremovable lid or without a lid. The outside dimensions for length (A) and depth (B) are 0.250″ larger than the inside dimensions. All have ½″ long legs and ⅞″ high handles.

Light Duty Stainless Steel Baskets

Designed for use with ultrasonic cleaners, these baskets are good for cleaning, rinsing, and dipping parts. Made of unpolished Type 304 stainless steel with a dull finish. ***Standard baskets*** have a 0.063″ wire diameter and a 0.187″ opening size. ***Extra-fine baskets*** hold the smallest parts. Wire diameter is 0.010″; opening size is 0.015″.

Wire Cloth Baskets

For information about wire cloth baskets, see page 2721.

Carbon Steel and Stainless Steel Baskets

Put all of your parts in the right basket. You choose the best wire diameter/opening size and handle style for your application. Baskets are made of woven wire cloth welded to a rod frame. 0.063″ wire dia. has a 0.187″ opening size, 0.047″ wire dia. has a 0.078″ opening size, and 0.012″ wire dia. has a 0.021″ opening size. Do not use sharp objects with 0.012″ wire dia. baskets.

Carbon steel with dull finish round and ***rectangular baskets*** are constructed of 1018 carbon steel. ***Stainless steel with dull finish round*** and ***rectangular baskets*** are made of Type 304 stainless steel.

Also Available: Custom size baskets. Please ask for 3287K999 and specify size, basket shape, handle style, wire diameter, and material.

Round Baskets

0.063″ and 0.047″ wire dia. baskets have a weight capacity of 50 lbs. 0.012″ wire dia. baskets have a weight capacity of 15 lbs.

To Order: Please specify wire diameter (0.063″, 0.047″, or 0.012″) and handle style (swinging loop, rigid loop, or dual grip).

Light Duty Carbon Steel Baskets

Pail Style with Lid *Barrel Style*

Clean and store parts in these economical, general purpose baskets. Made of 28-ga. galvanized steel with 0.025″ dia. wire and a 0.25″ opening size. Diameter at the widest point is 9″. Load capacity is 10 lbs.

Pail-style basket is 8¼″ deep and has a swinging-loop handle. Basket is tapered and nests for storing. *Optional lid for pail-style basket* locks in place on basket.

Barrel-style basket is 16½″ long when assembled. To assemble, snap the two halves together at the rim and lock with the clip (included).

Pail-Style Basket	32525K35	$13.40
Barrel-Style Basket	32525K25	18.11
Optional Lid for Pail-Style Basket	32525K45	7.13
Replacement Clip ♦	32525K55	.96

♦ Fits barrel-style basket and lid for pail-style basket.

Perforated Metal Baskets

Round with Rigid-Loop Handle *Rectangular* *Perforations*

Stamped holes in these sheet metal baskets make them more rigid than wire baskets. Use them for degreasing, cleaning, plating, and rinsing parts. All are unfinished.

Round baskets have two bottom- and four side-reinforcing braces for extra rigidity. Have ¼″ dia. perforations.

To Order: Please specify handle style: swinging loop or rigid loop.

Rectangular baskets have 3/32″ dia. perforations and a hinged cover.

For information about wire cloth baskets, see page 2721.

Perforated Polypropylene Baskets

Resistant to temperatures up to 212°F, these round baskets are good for cleaning, dipping, and pickling parts. They withstand most acids and plating and chemical fluids. They're perforated on the sides and bottom, have top and bottom reinforcing rings, and have a swinging-loop handle.

Inside Size, Dia. × Dp.	O'all Size, Dia. × Dp.	Cap., lbs.	1/8″ Dia. Perforations		3/32″ Dia. Perforations

♥ Has reinforcing cross pieces on the bottom.

Perforations

Long-Handle Nickel Steel Baskets

Keep hands clear of solutions as you wash, dip, and rinse parts with these long-handle baskets. Baskets are made of chrome-plated nickel steel with 0.087″ dia. wire and a 0.125″ opening size. Diameter listed below is for the top of the basket.

Inside Size, Dia. × Dp.	Handle Lg.		
8¼″ × 4½″	7½″	3218K22	$40.82
9¼″ × 4¾″	8½″	3218K33	43.44

Snap-Lid Steel Baskets

Baskets have a hinged lid that flips out of the way for filling and closes securely with a snap. Made of galvanized steel with a 0.025″ wire dia. and a 0.125″ opening size. They have a solid plastic top and bottom. To prevent opening, a hole through the lid's lips accepts a wire tie or other locking device. 3238K6 has a ¼″ dia. hole; K8 has a 5/16″ dia. hole.

Inside Size, Dia. × Dp.	Cap., lbs.		
2¼″ × 7¼″	2	3238K6	$9.38
4⅜″ × 7¼″	6	3238K8	12.65

Baskets for Miniature Parts

(1) Baskets have an open-top plastic frame and nylon mesh that won't scratch parts.

(2) All stainless steel construction with a shiny finish. These open-top baskets have a handle that can be bent so you can hang it over the edge of an ultrasonic cleaner.

(3) To open, squeeze the plastic handles on these stainless steel mesh round baskets. Mesh has a shiny finish.

(4) Basket consists of two halves that screw together to secure your tiniest parts. Made of very fine stainless steel mesh with a shiny finish and a brass frame.

	Basket Dia.	O'all Lg.	Approx. Mesh Opening Size

Slippery Plastic Surface Test Pens

Also known as dyne pens, these test pens quickly and easily test the surface energy (dyne level) of films and other nonabsorbent surfaces before printing, coating, or laminating. Works like a felt tip marker—a continuous line will occur if the material is properly treated while insufficiently treated material will have air bubbles and a disappearing mark. Overall length is 5¼″.

Dynes/cm			Dynes/cm

44	5590K17	25.84	58	5590K25	25.84

Slippery Plastic Surface Treater

Also known as a corona treater, this handheld device produces a high-voltage, high-frequency spark. This electric field created by the spark treats surface polymers with low-surface energy so the surface energy (dyne level) can be raised to a level that allows for printing and bonding.

Use in low volume lab and small parts surface treatment. Maximum continuous run time is 20 minutes. Operates on 120 VAC, 50/60 Hz and has a 6-ft. cord with three-prong plug. Power supply is 4⅛″ Lg. × 7¾″ Wd. × 3⅛″ Ht. Handpiece is 11″ Lg. × 2½″ Dia.

5693K14 ..... $550.34

About Static Eliminators

Static eliminators, also called ionizers, are designed to protect sensitive equipment from static charges, as well as to prevent equipment from producing static charges. Most static charges are caused by friction between two surfaces. When the surfaces separate, one loses electrons and becomes positively charged, while the other gains electrons and becomes negatively charged. This static charge causes the surfaces to resist separation (similar to "static cling"). It can cause machinery breakdowns, clogs, and hang-ups in plastic and paper processing, material slitting and converting, printing, conveying, and many other processes. An eliminator directs a flow of positive and negative particles at the machinery, neutralizing the static charge and allowing machinery to run at higher speeds without jams or clogs.

A discharge of a static charge can be destructive and dangerous to equipment. Known as ESD (electrostatic discharge), it's often seen and felt as small shocks that jump from our bodies in low-humidity conditions. ESD can destroy sensitive electrical and electronic equipment. Static eliminators minimize ESD for work on electronic equipment.

Static-Eliminating Bars— Use in close proximity applications where there is little or no air movement.

Static-Eliminators with Blowers— Use for larger applications where airflow is needed to cover a broader area.

Static Eliminators with Compressed Air— Whether with air knives or blowguns, compressed air allows for precision static elimination in hard-to-reach areas.

Static-Eliminating Bars

Also known as ionizing bars, these bars have shockless emitter points that concentrate ionization in one long, thin area to control the buildup of static electricity on conveyor and assembly lines. There's no blower to direct dirty air at the process, so the risk of outside contamination is minimized. Ideal mounting distance is 1″ to 3″ from the material.

Note: Do not mount directly over metal parts or rollers. The metal will absorb the ion charge and reduce the effectiveness of the equipment.

A complete system consists of bar, power supply, and power supply-to-bar connector cable (each sold separately). The ***power supply*** has a 6-ft. cord with three-prong plug and can run any number of bars. Two bars can be operated directly from a single power supply without the aid of the ***optional bar-to-bar connector cables***. Additional bars can be added using the bar-to-bar connector cables to connect the end of one bar to another. The ***optional bar tester*** is a pen size device that offers a quick means to determine if your static eliminator is operating. The neon light operates on an electrical current from the bar. No batteries required.

For information about static eliminators, see page 2723. For air hose, see page 2732.

Static-Eliminating Blowers

2245K31

2245K43 and 2245K49 2245K45

2245K61

2245K16

Project a curtain-like stream of static-eliminating air. Blowers have variable controls to tailor airflow to your application, except 2245K61 which has three speeds. They have built-in power supplies for the enclosed static-eliminating bar, except 2245K31 which has a power supply included in a separate enclosure that can also power other devices such as additional static-eliminating bars (see 2246K on page 2723). All operate on 115/120 VAC, 50/60 Hz and have a 6-ft. cord with three-prong plug.

Blowers are used for process applications and where a flow of ionized air is desired. A filter keeps dust and dirt particles out of the airstream.

Blowers with heater reduce wind chill for extra comfort in cool areas. 2245K16 is for overhead use and includes built-in lights. *Adjustable floor stands* for 2245K43, K45, and K49 are sold separately below. Replacement *filter kits* are also sold separately below. 2245K44 consists of five filters and a holding frame and clips. 2245K62 consists of a replacement filter frame and one filter.

Static-Eliminating Blowguns

A

Power Supply for A

B

Included Power Supply for B

Neutralize static charges in seconds. These blowguns blow off dust and contamination. For best results, keep Style A's nozzle no more than 6″ from the surface of the part being cleaned and Style B's nozzle 2″ to 10″ from the part. Power supply sold separately below (unless noted). Blowguns require a clean, dry air supply. Features shockless operation. For a static charge detector, see page 1828. Both blowguns meet OSHA directive for maximum outlet pressure.

Caution: Do not use near flammable materials or gases.

A High-Force Blowgun— A strong blow-off force neutralizes static electricity up to 15 ft. Operates on compressed air. Includes a 10-ft. cable for connection to the required power supply. Air inlet: ¼″ NPT female. Maximum inlet pressure: 250 psi. Air consumption @ 40 psi: 11.5 cfm. Recommended air line filter size: 5 microns and smaller.

Power supply (sold separately below) accommodates two blowguns. It has a lighted on/off switch and a 6-ft. power cord with three-prong plug. Input: 115 VAC, 50/60 Hz. UL and C-UL listed.

		Each
Blowgun with Cable	5406K76	$406.74
Power Supply	52555K31	321.35
Optional 5-ft. Blowgun Extension Cable	52555K32	73.53

B Easy-Adjustment Blowgun— Has all the functionality built in to the gun. Functions include flow control, balanced adjustment for calibration, and two-level LED which indicates power and ionization. Has a 0.01-micron filter in the end of the blowgun that changes color when it needs replacement. Meets clean room Class 1000 requirements. Operates on compressed air or nitrogen.

Blowgun includes a 7-ft. cable for connection to power supply and a hanger for mounting. Air inlet: ⅛″ NPT female. Maximum inlet pressure: 100 psi. Air consumption @ 100 psi: 7.4 cfm. Power supply (included) has power-on light. Has a 6-ft. cord with three-prong plug. Input: 120 VAC, 50/60 Hz.

Blowgun with Cable/Hose and Power Supply	34405K77	Each	$869.53
Repl. Filters/Tips (Pkg. of 2)	34405K79	Pkg.	$81.08

Static-Eliminating Blowers for Large Areas

Create an extra wide field of ionized air, eliminating static electricity in applications that involve wide processing equipment and products. Suspend from a ceiling or mount on a wall, floor, bench, or machine frame. Include a variable air speed/volume control, an on/off switch, a pilot light, and a 6-ft. cord with three-prong plug. Operate on 110/120 VAC, 50/60 Hz. All are 3 9/16″ Ht. × 5⅜″ Dp. Optional ***air filters*** (sold separately) prevent contamination of the process or equipment.

Max. Air Vol. Output	Max. Static Field, Wd. × Lg.	Overall Size, Ht. × Wd. × Dp.	No. of Fans		Each
105 cfm	14″ × 8′	3 9/16″ × 20″ × 5⅜″	1	2241K49	$902.16
210 cfm	24″ × 8′	3 9/16″ × 30″ × 5⅜″	2	2241K51	1,016.74
315 cfm	34″ × 8′	3 9/16″ × 40″ × 5⅜″	3	2241K53	1,193.66
525 cfm	54″ × 8′	3 9/16″ × 60″ × 5⅜″	5	2241K55	1,494.54
Air Filters (Pkg. of 10)				2241K57 Pkg.	$15.48

Static-Eliminating Blower for Hard-to-Reach Areas

A concentrated flow of ionized compressed air removes static and dust at distances up to 15 feet away. Ideal for hard-to-reach areas and confined spaces. Includes a pivoting mounting stand for precise direction of the airstream. Blower produces up to 420 cfm @ 100 psi input pressure. Air consumption is 18.7 cfm @ 100 psi. Requires a power supply (sold separately below) for ion generation, as well as an existing source of compressed air operating from 5 to 100 psi max. (connection is ⅜″ NPT female). Overall size is 5 1/16″ Ht. × 6¼″ Wd. × 6 1/16″ Dp. ***Power supply*** (sold separately) includes a 6-ft. power cord with three-prong plug.

Blower	3150K82	$582.06
Power Supply (115 VAC, 50/60 Hz input)	52555K31	321.35

For air hose, see page 2732. For noise (decibel) information, see page 2727.

Workstation Static Eliminators

Small enough to place at your workstation or desktop for protection against ESD (electrostatic discharge) in a limited area.

Without Fan— No blower means it's ideal when airflow could stir up unwanted dust or displace lightweight components and paperwork. It maintains a static-safe environment from 6″ to 18″ for Class 2 and 3 ESD-sensitive equipment. Size is 5¼″ Ht.×4¾″ Wd.×2½″ Dp. Operates on 120 VAC, 50/60 Hz and has a 6-ft. power cord with three-prong plug.

2240K43 ..... $396.81

With Fan— Quickly control static over a 12″×48″ area. Includes a swivel stand that can be mounted anywhere. Fan has two speeds (21 and 42 cfm). Size is 5⅜″ Ht.×3⅞″ Wd.×2⅜″ Dp. Operates on 120 VAC, 50/60 Hz and has a 6-ft. cord with a three-prong plug.

2240K66 ..... $491.09

Compressed-Air Air Knives

Using compressed air, these air knives produce a high-volume, high-velocity sheet of air. They cool parts and blow liquids, chips, and dust from conveyors and moving webs. Air flows out through a gap set at 0.002″. Shims (sold separately) enlarge the gap to adjust the flow and force of air. Knives have no moving parts so they're maintenance free. Quieter and more efficient than open jets and drilled or slotted pipe, air knives reduce noise and use 40-90% less compressed air.

Air knives should be used with clean air. A 5-micron or smaller auto-drain filter is recommended. Air inlet: ¼″ NPT female. Maximum inlet pressure: 250 psi. Recommended operating air pressure is 80-100 psi. Meet OSHA 1910.242(b) for dead-end pressure and 1910.95(a) for noise level.

General Purpose Air Knives— Use where higher air consumption and noise levels are acceptable (86 dB @ 100 psi for standard; 78 dB @ 40 psi for static-eliminating). They amplify incoming air by a factor of 30 to 1. Air inlets are on the end of each knife. Air slot extends to within ½″ of end of air knife. *Standard aluminum knives* are 1 1/16″ Ht.×1⅜″ Dp. and withstand temperatures up to 180° F. *Static-eliminating aluminum knives* are 1 21/32″ Ht.×1⅜″ Dp. and withstand temperatures to 160° F. *300 series stainless steel* are 1″ Ht.×1¼″ Dp. and withstand corrosive environments and temperatures up to 800° F. Great for food and pharmaceutical applications.

High-Efficiency Air Knives— Use 18% less compressed air and are quieter than general purpose air knives (69 dB @ 80 psi). They amplify incoming air by a factor of 40 to 1. Air inlets are on both ends and in the bottom of the knife. Air slot extends full width of knife. *Standard aluminum knives* are 1 7/16″ Ht.×1¾″ Dp.; withstand temperatures up to 180° F. *Static-eliminating aluminum knives* are 1 27/32″ Ht.×2 15/64″ Dp.; withstand temperatures up to 160° F. *300 series stainless steel* are 1 1/32″ Ht.×1 7/16″ Dp.; withstand corrosive environments and temperatures up to 800° F. Great for food and pharmaceutical applications.

Static-eliminating air knives neutralize static charges and prevent ESD (electrostatic discharge) by flowing positive and negative ions onto the surface or part. Knives are aluminum with a shockless antistatic ionizing bar and a 5-ft. shielded cable for connection to the 5 kV power supply. Work up to 20 feet away. UL and C-UL recognized. Power supply (sold separately) has two ports to handle two air knives at the same time. Operates on 115 VAC, 50/60 Hz. Power supply is UL and C-UL listed.

Three-piece shim sets enlarge the gap to adjust the flow and force of air. Include plastic shims in sizes 0.001″, 0.003″, and 0.004″ for aluminum knives or three 0.002″ stainless steel shims for stainless steel knives.

Air filter/regulators combine a 5-micron auto-drain filter for clean air and a regulator for controlling the consumption, flow, and force of air.

Caution: Do not use near flammable materials or gases.

Universal mounting system has a 31″ reach and two locking swivels. It mounts to anything that has a ½″-13 UNC threaded hole.

Blower-Driven Air Knives

When connected to a blower, these air knives provide high-speed airflow at low pressure. The airflow slot is adjustable from 3/64″ to 9/32″. Ideal for dust, chip, and water removal; drying; belt wiping; and controlling coating depth. They can also control the movement of smoke or fumes as well as function as a barrier to keep hot air in industrial ovens and cold air in freezers. Made of aluminum. Connect to round rigid duct, flexible duct, and air hose. Duct air hose fits over the 2½″ OD. *Note:* Knives are not rated for cfm.

Note: A standard system can be put together when purchasing an air knife and the correct optional blower (see below), threaded pipe (see page 6), hex bushing/reducer (see page 5), and hose fitting (see below). The hose fitting listed below is 3″ long with a 2½″ ID at one end for connecting to the air knife with a hose clamp (not included) and a 2″ NPT female threaded connection at the other end for connection to the blower using a reducer and threaded pipe (both not included).

Blowoff Nozzles

Airflow Pattern

Focused Airflow *Flat Airflow*

Replace the noise and inefficiency of drilled pipe, open-air jets, and similar devices with the quiet, strong blowing force of these blowoff nozzles. They efficiently use compressed air, saving on energy costs. Use for drying, cleaning, sorting, and parts ejection. Build your own multiple nozzle air curtain—just team the nozzle of your choice with a manifold (see pages 220-221).

Nozzles A and ***L-N*** meet OSHA directive for maximum noise level.

Nozzles B-K and ***P-R*** meet OSHA directives for maximum noise and outlet pressure.

Focused Nozzles— Cone-shaped nose delivers concentrated air flow.

(A) Plastic Nozzles— Made of ABS plastic, they resist oils, lubricants, and solvents.

(B) Direct-Jet Nozzles— Narrow airstream gets into small, hard-to-reach areas.

(C) Adjustable-Flow Nozzles— Airflow and thrust can be adjusted by turning the internal set screw and rotating the nozzle tip.

(D) Broad-Nose Nozzles— Nozzles produce a broader shaft of air than other focused nozzles. Flanges protect exhaust ports. *Aluminum* resists higher temperatures than *zinc* and *zinc/aluminum*. *Plastic* is PEEK and is the best choice for chemical and corrosive environments.

(E) High-Heat/Corrosion-Resistant Plastic Nozzle— Made of PEEK plastic, it withstands temperatures up to 500° F, aggressive chemical environments, corrosive fluids, and has extremely high impact resistance.

(F&G) High-Force Nozzles— High-quality, high-powered nozzles generate two to four times the blowing force of most other nozzles listed here. *Style G* is made entirely of stainless steel and is corrosion and heat resistant.

(H) Tube Mounted Nozzles— Nozzle is permanently mounted on copper tubing. Overall length for 8451K31 is 6″; for K32 and K37 is 8″.

(J) Flexible-Hose Nozzles— Direct this nozzle exactly where it's needed. It's permanently mounted on a rubber hose. Overall length is 12″.

(K) Pipe Nozzles— Nozzles thread right onto male threaded pipe.

Flat Nozzles— The flat nose distributes air over a wide area.

(L-N) Plastic and ***Aluminum Nozzles—*** *Plastic* nozzles are made of acetal and resist oils, lubricants, and solvents. *Style M* has a steel extension tube for hard-to-reach areas and overall length is 7.87″. *Aluminum* nozzle withstands more severe temperatures.

(P) Recessed-Orifice Nozzles— The recessed orifice design prevents air outlets from being damaged or blocked. Nozzles resist oils, lubricants, and solvents. *Plastic* nozzle is made of ABS plastic.

(Q) Heavy Duty Nozzles— Durable nozzles emit a wide jet of air, making them well suited for parts ejection in punch presses and drying/transporting applications. Exhaust ports are protected by flanges. Nozzle width for 31875K19 is 15/16″.

(R) Tube Mounted Nozzles— Nozzles are mounted on chromated copper tubing. Offered with 1/4″ NPT connection or with an unthreaded end. Overall length is 12.13″.

Nozzle Swivels— Allow nozzles to swivel 30° left, right, up, and down.

(S) Stainless Steel Swivels— Use with nozzles that have a male air inlet connection to fine tune direction of airflow. They have the same size thread on both ends—one male and one female.

■ @ 72.5 psi. ● @ 75 psi. ▲ Do not meet OSHA dead-end pressure requirements. Must be used with a pressure regulator set at 30 psi or less to meet OSHA directives for maximum outlet pressure. ◤ Nozzle dia. is 0.34″. ♥ Nozzle dia. is 0.70″. ★ Nozzle width is 0.938″.

For air hose, see page 2732.

Circular-Flow Air Knives

Get a uniform 360° airstream with the circular design of these air knives. Used with compressed air, they're ideal for blowoff, drying, cleaning, and cooling of pipe, cable, extruded shapes, and hose. They're hinged for easy positioning around the material moving through them. All knives include two stainless steel shims to adjust air flow. Air inlet is 1/4″ NPT female. Meet or exceed OSHA noise and dead-end pressure requirements.

Aluminum is rated for temperatures up to 400° F.

Type 303 stainless steel is rated for temperatures up to 800° F.

Shim sets include two 0.002″ thick stainless steel shims.

Flexible Blowoff Nozzles with Magnetic Bases

Adjust the hose on these nozzles to deliver air exactly where you need it. The magnetic base provides easy placement. All nozzles have a control valve for adjusting air flow.

Standard Duty— Have a modular plastic hose that snaps together and a polypropylene nozzle. Nozzle produces a concentrated air flow. In addition to air, these nozzles may be used with liquid coolants. Magnetic base pull: 38 lbs. Air inlet: 3/8″ hose barb. Max. inlet pressure: 60 psi. Hose length: 9″. Hose ID: 1/4″. For replacement hose and fittings, see Snap-Loc hose assemblies on page 2202. Not rated for blowing force, sound level, or air consumption.

Double Hose

Single Hose Nozzle	33345K7	$43.78
Double Hose Nozzle	33345K9	49.23

Heavy Duty— Has oil and abrasion resistant rubber hose and three times the magnetic base pull compared to the Standard Duty nozzles. Nozzle is zinc and delivers a broad cone-shaped air flow. Meets OSHA directive for maximum outlet pressure. Magnetic base pull: 120 lbs. Air inlet: 1/4″ NPT female. Max. inlet pressure: 150 psi. Blowing force @ 100 psi: 1.02 lbs. Sound level @ 100 psi: 78 dB. Air consumption @ 100 psi: 17.5 cfm. Hose length: 12″.

Single Hose Nozzle	31665K21	$166.82

About Blowguns

Blowguns use compressed air for industrial cleaning and drying. When selecting a blowgun consider blowing force, noise level, and air consumption and the tradeoffs between these features. For example, a gun with 2.1 lbs. of blowing force will have almost twice the blowing force as a gun with 1.2 lbs. of blowing force, but will be noisier (107 dB vs. 88 dB) and consume more air (24 cfm vs. 17 cfm).

The following are examples of decibel levels and related noises.

82- 90 dB: Manual Machine Tool, Handsaw
91- 95 dB: Electric Drill
96-104 dB: Factory Machinery
100-107 dB: Snow Blower
125-127 dB: Chain Saw

Note: Many blowguns, referred to as safety blowguns, meet the OSHA requirement for the use of blowguns by having vents in the tip to prevent pressure from exceeding 30 psi if tip becomes blocked. See OSHA standard 29CFR part 1910.242(b) and OSHA Instruction STD 1-13.1 (OSHA Directive #100-1) for more information. OSHA also has permissible daily noise exposure specifications which affect blowguns. See OSHA standard 29CFR Part 1910.95(a) for more information.

Lever-Handle Blowguns

1

2 *With Hose*

3

4

All blowguns have a PVC-coated lever handle, a vented safety nozzle, and a hanging hook. Max inlet pressure: 150 psi (unless noted). Air inlet: 1/4″ NPT female. Air outlet: 1/8″ NPT female (except 54405K35, which is 3/8″ SAE female). Meet OSHA directive for maximum outlet pressure.

(1) Economy blowgun and nozzles are nickel-plated, die cast zinc. Includes a safety nozzle and a nonsafety nozzle. Max. inlet pressure: 90 psi. *Note:* When using nonsafety nozzle, blowgun must be used with a pressure regulator set at 30 psi or less to conform to OSHA requirements.

(2) Standard blowguns have chrome-plated, die cast zinc bodies and all brass internal components. They are sold with and without nylon recoiling hose. Hose has 1/4″ ID and two 1/4″ NPT male fittings—one swivel and one rigid.

(3) 3″ extended reach blowgun has a chrome-plated, die cast zinc body and all brass internal components. It has a 3″ Lg.×5/16″ Dia. nickel-plated steel safety extension. Overall length is 6 3/4″.

(4) Air booster blowgun has multiple holes in the 2″ long safety nozzle to increase air volume. Body is chrome-plated, die cast zinc with all brass internal components.

	Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi

Pistol-Grip Blowguns

Basic

Deluxe

These guns are for all-around use and include a hang-up hook. Max. inlet pressure: 150 psi. Air inlet: 1/4″ NPT female. Meet OSHA directive for maximum outlet pressure.

Basic— Has a chrome-plated, die cast zinc body and brass nozzle. Air outlet: 1/8″-27 NPS female.

Deluxe— Body is polished, die cast aluminum with a nonslip, vinyl handle. Nozzle is nickel-plated brass. Air outlet: 1/8″ NPT female.

	Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi		
Basic	Not Rated	Not Rated	10 cfm	5668K21	$20.22
Deluxe	0.5 lbs.	84-86	10.5 cfm	5668K11	24.61

Push-Button Blowgun

The ease of pushing a button, yet the force of other guns. Gun has a brass nozzle and a black polyurethane-coated, die cast zinc body. Includes a hang-up hook.

Maximum inlet pressure: 150 psi. Air inlet: 1/4″ NPT female. Air outlet: 1/8″ NPS female. Meets OSHA directive for maximum outlet pressure.

Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi		
0.5 lbs.	86	10 cfm	5467K14	$9.66

For information about blowguns, see page 2727. For blowgun accessories, see pages 2731-2732.

Extended-Reach Blowguns

Lengths shown below are extension lengths. For overall length, add 3″ (unless noted). Max. inlet pressure: 120 psi. Meet OSHA directive for maximum outlet pressure (unless noted).

(1) Standard and ***(2) High Thrust Pistol Grips—*** Have an increased-flow nozzle, hang-up hook, cast aluminum body, nozzle, and extension. *High-thrust* blowguns have a unique internal design that delivers 50% more air volume and thrust than the *standard thrust* model.

(3) Quiet Air Pistol Grip— Three times quieter but with 50% less air thrust than *standard pistol-grip* blowguns. A cone-shaped nozzle with tiny air outlets around its circumference reduces noise and increases air flow. Made of cast aluminum. Add 4″ for overall length.

(4) Comfort-Grip Pistol Grip— A rubber handle and longer trigger provide the ultimate user control and comfort. Made of aluminum.

(5) Standard Lever Handle— Chrome-plated, die cast zinc body and all brass internal components ensure guns only blow air and not rust particles. Have a vinyl-coated lever handle with a hang-up hook. Each has a 5/16″ diameter nickel-plated steel straight-tube extension. Add 3 9/16″ for overall length.

(6) Angled-Nozzle Lever Handle— Angle into tight spots—the ends of these extra-long extension nozzles are bent 36°. Blowguns have a die cast zinc body with one brass nozzle and one rubber nozzle. Add 2 1/4″ for overall length. *Note:* When using the rubber nozzle, blowgun must be used with a pressure regulator set at 30 psi or less to conform to OSHA directive for maximum outlet pressure.

Accessories and Replacement Parts

Valve repair kits include valve stem assembly, seal, hex nut, spring, and gasket. *Optional nylon safety nozzles* (available for use with standard- and high-thrust pistol-grip blowguns) won't scratch delicate finishes.

	For Standard Thrust		For High Thrust		For Quiet Air	
Valve Repair Kit	5536K42	$7.20	5474K71	$6.29	5536K42	$7.20
Optional Nylon Safety Nozzle	5536K41	14.53	5474K15	14.53	_____	_____
Replacement Aluminum Safety Nozzle	5536K21	5.43	5474K21	6.93	8316K41	15.14
Replacement Brass Safety Nozzle for Angled Lever-Handle Blowgun					5429K11	$2.72
Replacement Rubber Nozzle for Angled Lever-Handle Blowgun					5418K63	3.96

Telescoping-Shaft Blowguns

Reach the unreachable—blowguns have a stainless steel tube that telescopes from 8″ to 32″, which eliminates the need to have several blowguns in different lengths. Telescoping tube includes a 5/16″ dia. nozzle. Air consumption @ 100 psi: 11 cfm. Maximum inlet pressure: 150 psi. Air inlet: 1/4″ NPT female. Air outlet: 1/8″ NPS female. Meet OSHA directive for maximum outlet pressure. ***Pistol grip*** has a plastic body with nickel-plated brass air inlet threads. ***Lever handle*** has a chrome-plated die cast zinc body.

	Blowing Force @ 100 psi	dB @ 100 psi		
Pistol Grip	0.5 lbs.	85	3417K31	$36.62
Lever Handle	0.5 lbs.	85	3417K11	32.01
Repl. 8″-32″ Telescoping Extension			3417K12	$22.99

Extended-Reach Blowgun Holder

Finally, easy storage for your blowgun. This polyethylene holder has a magnetic base and is open at both ends making it ideal for blowguns with any length extension tubes. Holder is 12″ Lg. × 1 3/4″ ID and fits all guns on this page as well as any guns with up to a 1 3/4″ OD. Base is two 3 1/4″ dia. magnets with a combined holding force of 190 lbs.

8717K18 ..... $24.06

For information about blowguns, see page 2727. For blowgun accessories, see pages 2731-2732.

Flexible Nozzle Blowguns

Blow in any position—simply adjust the jointed 7″ extension tube. Great for space-restricted areas. 3390K41 has a glass-filled nylon body and K31 has a plastic body. Both have high-impact plastic extension tube and nozzle. Maximum inlet pressure: 150 psi. Air inlet: ¼″ NPT female. Air outlet: ⅛″ NPS female for 3390K41 and ⅛″ NPT female for 3390K31.

	Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi		
Pistol Grip	0.5 lbs.	84-86	11 cfm	**3390K41**	$36.62
Lever Handle	0.5 lbs.	84-86	15 cfm	**3390K31**	30.94

Pressure-Regulated Blowguns

A built-in pressure regulator and safety screen allow a maximum discharge of 30 psi without letting particles through. Guns are die cast zinc. UL classified. Max. inlet pressure: 150 psi. Air inlet: ¼″ NPT female. Air outlet: ½″-27 UNS female. Meet OSHA directive for maximum outlet pressure.

Blowgun with extension nozzle includes a brass safety nozzle. Blowing force @ 100 psi: 0.25 lbs. Sound level @ 100 psi: 95 dB. Air consumption @ 100 psi: 5.5 cfm. Overall gun length is 5⅞″.

Blowgun with high-volume nozzle includes an aluminum safety nozzle with holes designed to increase air volume. Blowing force @ 100 psi: 0.39 lbs. Sound level @ 100 psi: 106 dB. Air consumption @ 100 psi: 18 cfm. Overall gun length is 4⅝″.

With Extension Nozzle

With High-Volume Nozzle

Blowgun with Extension Nozzle	**5457K51**	$13.40
Blowgun with High-Volume Nozzle	**5425K51**	13.69
Replacement Extension Nozzle for 5457K51	**5457K41**	4.91
Replacement Nozzle Tip for 5457K51	**5429K11**	2.72
Replacement High-Volume Nozzle for 5425K51	**5425K61**	6.38

Dual Inlet Blowguns

Two air inlets for twice the versatility. Use the top inlet when blowgun is suspended from an overhead hose; use the bottom inlet for bench and floor hoses. A plug seals off the unused inlet. Body is made of high-impact plastic and has a trigger that allows you to vary airflow from a puff to a blast. Air inlets: ¼″ NPT female. Air outlet: 7 mm male. Air consumption @ 100 psi: 13.2 cfm. Max. inlet pressure: 143 psi. Meet OSHA directive for maximum outlet pressure.

Blowgun with bent nozzle has a 4″ bent steel nozzle as well as a straight stainless steel nozzle.

Blowgun with hose has a 12″ flexible hose with nozzle. The hose has a copper core that can be bent and will hold the position.

With Bent Nozzle

	Blowing Force @ 100 psi	dB @ 100 psi		
With Bent Nozzle	0.89 lbs.	82.8	**5932K33**	$77.24
With Hose	0.89 lbs.	82.8	**5932K27**	132.76

Push-to-Activate Blowguns

Blowgun with Extension

Easily blow out lines, pipes, tubes, and other hard-to-reach areas. Just push to activate these blowguns, or use as standard blowguns by pulling back on the knurled nozzle. Blowguns are nickel-plated brass with a rubber conical tip. Max. inlet pressure: 125 psi. Air inlet: ¼″ NPT female.

	Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi		
Blowgun	Not Rated	92	8 scfm	**3794K1**	$25.14
Blowgun with 12″ Extension				**3794K2**	31.02
Blowgun with 24″ Extension				**3794K3**	33.12
Blowgun with 36″ Extension				**3794K4**	35.12

Air Shield Blowguns

Center airstream blows away debris, while an outer air spray shields against flying chips and dirt. Blowguns have a cast aluminum body (unless noted) with a hang-up hook. Air inlet: ¼″ NPT female. Air outlet: ⅛″ NPT female (unless noted). Meet OSHA directive for maximum outlet pressure.

(1) Standard lever handle has a chrome-plated, die cast zinc body with brass internal components and a vinyl-coated lever handle.

(2) Tamper-resistant recessed-nozzle pistol grip has a tamper-resistant opening set back inside the nonremovable nozzle. Four vents around the end of the nozzle prevent pressure buildup.

(3) Adjustable air-blast pistol grip has a knurled adjusting nut that allows you to vary the air volume from a puff to a blast.

(4) Extension-nozzle pistol grip has an air shield nozzle plus a 3/16″ OD×6″ Lg. brass nozzle extension that can be bent to suit your application. Air outlet: ⅛″ NPS female.

(5) Blind-hole pistol grip has a 3/16″ OD×6″ Lg. brass extension with a ⅛″ OD×2″ Lg. flexible nylon tube attached to the end to clean out blind holes in workpieces.

Repair Kits for Pistol-Grip Blowguns— 5450K18 has a valve seal, spring, and gasket. 5450K61 has a valve stem assembly, flow control assembly, seal, spring, and gasket. 5536K42 has a valve stem assembly, seal, hex nut, spring, and gasket.

	Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi	Max. Inlet Pressure		
1	0.5 lbs.	86	10.5 cfm	150 psi	**5939K69**	$14.73
2	Not Rated	94	18 cfm	150 psi	**5450K16★**	19.33

8	Milton "T" style or any ¼″ Tru-Flate or Parker Hannifin	0.82 lbs.	107	**5270K27**	6.89
9	Milton "L" style or any ¼″ Lincoln	0.82 lbs.	107	**5270K28**	7.82

For information about blowguns, see page 2727. For blowgun accessories, see pages 2731-2732.

Lightweight Blowguns

Lightweight, ergonomic design maximizes comfort and minimizes wrist strain. The easy-grip trigger varies airflow from a puff to a blast. A complete blowgun includes a body and a safety nozzle (each sold separately).

Bodies are high-impact plastic with a nickel-plated brass extension tube that has a groove near the end for clipping nozzles to it. All blowguns can be used without a nozzle attached. Maximum inlet pressure: 232 psi. Air inlet: 1/4″ NPT female. Air outlet: 5 mm×1 mm.

When used with the safety nozzles sold below, blowguns meet OSHA directive for maximum outlet pressure.

Body with fixed extension has a nonremovable extension to deter tampering. ***Bodies with removable extension*** have removable extension tubes that simply twist on or off so you can use various extensions with the same body.

Safety nozzles allow air to escape through radial holes to keep nozzle pressure below 30 psi if end of nozzle becomes blocked. Nozzles are aluminum and cannot be removed once they're clipped to the extension tube (unless noted). *Standard nozzle* is for general purpose use. *Increased-flow nozzle* amplifies the airflow by 100% compared to a standard nozzle. *Air-shield nozzle* is removable and creates an effective air curtain around the main airstream to reduce chip and dust blowback.

Nonmarring Blowguns

Nozzle is made of rubber so it won't mar paint or scratch delicate finishes. It also forms a leakproof connection when blowing out air and fluid lines. Blowguns are die cast zinc with a 4 5/16″ long brass extension for accessing hard-to-reach areas. Blowing force @ 100 psi: 0.77 lbs. Sound level @ 100 psi: 105 dB. Air consumption @ 100 psi: 11.4 cfm. Max. inlet pressure: 150 psi. Air inlet: 1/4″ NPT female. Air outlet: 1/2″-27 female.

Blowgun with Straight Extension (6 1/4″ o'all lg.)	5418K61	$11.15

Repl. Rubber Nozzle (1 5/16″ o'all lg.)	5418K63	3.96

Blowgun with Quick-Change Nozzles

Get five blowguns in one. A complete blowgun includes a safety yellow die cast steel lever-handle body with a quick-change fitting for easy nozzle changes plus these five nozzles: ***(1) star*** for low noise (5 1/2″ Lg.); ***(2) air shield*** projects a cone of air around the main airstream to reduce chip and dust blowback (5 3/4″ Lg.); ***(3) air booster*** to boost air volume without exceeding safe air pressure (5 1/2″ Lg.); ***(4) rubber*** for blowing out molds and lines, and for delicate surfaces (6″ Lg.); ***(5) needle*** with a 1/4″ dia. for tight spaces (4″ Lg.).

Air consumption (1-3) @ 100 psi: 4 cfm. Air consumption (4-5) @ 30 psi: 2 cfm. Max. inlet pressure: 150 psi. Air outlet: 1/8″ NPT female. Not rated for blowing force or sound level. Meet OSHA directive for maximum outlet pressure except when used with nozzles 4&5 which must be used on air lines with a pressure regulator set at 30 psi or less to meet OSHA directive.

Also Available: Replacement nozzles; ask for 3321K4 and specify nozzle style.

	Air Inlet		
Complete Blowgun	1/4″ NPT Female	3321K3	$27.64
Replacement Needle Nozzle		3321K44	2.00
Optional 12″ Star Extension Nozzle		3321K5	7.89
Optional 18″ Star Extension Nozzle		3321K6	11.15

Flexible-Handle Blowguns

Squeeze handle to operate, release to stop airflow. Handle is molded chemical-resistant rubber with a ribbed thumb rest for positive gripping. Fittings are brass. Not rated for blowing force or sound level.

Rubber-nozzle blowguns won't scratch delicate surfaces. Overall length is 4 3/8″. Meet OSHA requirements for dead-end pressure. Air consumption @ 40 psi: 7 cfm.

Threaded-nozzle blowguns have a 5/16″-27 male thread for attaching the optional nozzles (sold separately). O'all length is 4 5/8″. Air consumption @ 40 psi: 11 cfm. The 3″ stainless steel extension nozzle has a brass cap and can be used with or without the optional brass safety nozzle.

Max. Inlet Pressure	Air Inlet	*Rubber Nozzle*		*Threaded Nozzle*	
125 psi	1/4″ NPT Female	5438K24	$23.22	5438K16	$24.64

3″ Stainless Steel Extension Nozzle for K16 and K17				5438K18	$3.09
Brass Safety Nozzle for K16 and K17				5438K25	4.11

Quiet-Air Blowgun

Aluminum nozzle has tiny air outlets around its circumference to increase thrust and reduce noise. Body is cast aluminum. Max. inlet pressure: 120 psi. Air inlet: 1/4″ NPT female. Meets OSHA directive for maximum outlet pressure.

Blowing Force @ 100 psi	dB @ 100 psi	Air Consumption @ 100 psi		
1.1 lbs.	93	21 cfm	54615K35	$22.36
Repl. Safety Nozzle			54615K21	14.64

Clean-Air Blowgun

A replaceable filter in this blowgun traps particles as small as 0.01 micron (rust, scale particles, and smoke) and absorbs up to 1 fluid oz. of moisture. Excellent for extra-clean, dry surface preparation. For critical applications, the filter should be changed weekly. Body is chrome-plated, die cast zinc with a brass safety nozzle. Includes a hang-up hook. Overall length is 8″.

Air consumption @ 100 psi: 30 cfm. Max. inlet pressure: 100 psi. Air inlet: 1/4″ NPT female. Air outlet: 1/4″ NPT female. Not rated for blowing force or sound level. Meets OSHA directive for maximum outlet pressure.

Blowgun with Filter	55135K45	$31.42
Replacement Filter	55135K65	13.19

For information about blowguns, see page 2727.

High-Force Blowguns

When you need more force, these blowguns handle the job. They're more powerful than almost all other blowguns we sell. All meet OSHA directive for maximum outlet pressure.

Pistol Grip— Multiple-jet nozzles deliver large volumes of air at high thrust. The trigger allows you to vary airflow and is extra long for comfort. Nozzles have safety air-flow vents. Made of cast aluminum with a rubber-coated handle and have a built-in hang-up hook.

Wide-Airflow Pistol Grip— The flat nozzle of this blowgun provides a wide stream of air for blowing a broader area. Handle is durable acetal rubber; nozzle is zinc.

Cannon-Barrel Lever Handle— An extra-large 4¼″ long safety nozzle distributes air over a wide area and the oval-shaped holes around the nozzle draw in additional air to increase flow. Gun is chrome-plated, die cast zinc.

Repl. Extensions and ***Nozzles for Pistol-Grip Blowguns—*** Fit only the pistol-grip blowguns, not the wide-airflow pistol grip or cannon-barrel lever handle blowguns.

♣ @ 100 psi. ■ @ 95 psi.

Ultra-Force Blowguns for Large Areas

The most powerful blowguns we sell. A specially designed nozzle causes air to speed up as it goes through the nozzle drawing in surrounding air for increased air power at the nozzle tip. The lightweight, heavy duty extension gets into hard-to-reach areas. For comfort and control, guns include an adjustable second handle for two-hand operation; handle can be mounted anywhere along the extension. Constructed of heavy duty aluminum with a large trigger for easy operation. Ideal for industrial and construction applications and for cleaning and blowing large areas and spaces. Meet OSHA directive for maximum outlet pressure. *Replacement adjustable handle* for two-hand operation fits any blowgun with an extension tube up to ⅞″ OD.

Cold-Air Blowgun

A quick and safe way to cool electronic components and other parts. Replaces freeze-type chemical sprays used for testing electronic/electrical components. When used with compressed air set at 80 psi, blowgun generates a –40° F (–40° C) stream of air. No moving parts means it's maintenance free. Has lever handle trigger. Overall length is 10¼″. For best results, set the nozzle within ⅛″ of the part being cooled. Recommended hose dia. is ⅜″ for hose up to 25 ft. long, and ½″ for hose longer than 25 ft. Use a clean air supply and a maximum 25 micron air filter (not included). Supplied with a ¼″ dia. nozzle. Air consumption @ 80 psi: 8.5 cfm. Air inlet: ¼″ NPT female. Sound level is 70 dB @ 80 psi. Not rated for blowing force.

Cold-Air Blowgun	5408K61	$292.55
Optional 1″ Wide Fan Nozzle	5408K62	4.39

Nozzles and Extension Nozzles for Blowguns

These nozzles and extensions do not have safety vents and do not meet OSHA directive for maximum outlet pressure unless used on air lines with a pressure regulator set at 30 psi or less. This doesn't apply to the *siphon nozzle*. All nozzles and extensions will fit any blowgun with a ⅛″ NPT female air outlet (unless noted).

(1) Five-Piece Needle Nozzle Set— Needle nozzles concentrate airflow into a pinpoint. Nozzles have a stainless steel tube and a nickel-plated brass fitting. Set includes tube sizes (Dia.×Lg.): 0.134″×2¾″, 0.095″×2 15/32″, 0.072″×1¾″, 0.050″×1 3/16″, and 0.042″×15/16″.

Also Available: Replacement nozzles. Please ask for 5446K7 and specify nozzle size.

(2) Rubber Nozzle— Forms an airtight connection for blowing out molds and lines, and won't scratch delicate surfaces.

(3) 8″ Flexible Extension Nozzle— Snakes into hard-to-reach areas. Made of 23/64″ dia. steel tubing with brass fitting and a 21/64″ dia. brass nozzle.

(4) 6″ Rigid Extension Nozzles— Choose ¼″ dia. steel or 3/16″ dia. brass tubing.

(5) Siphon Nozzle— Converts your blowgun to a spray gun. Nozzle has a barbed hose fitting and includes 7 ft. of ¼″ ID clear PVC tubing.

(6) Round Brush Nozzles— Brush and blow away debris in one step.

(7) Flexible Extension with Nozzle— Modular design for easy shortening by hand. Flexibility allows access to hard-to-reach areas. Made of acetal plastic.

			Set
1	Five-Piece Needle Nozzle Set	5446K45	$20.79

▲ Has NPS threads; fits blowgun 5450K14 on page 2729.

Safety Nozzles and Extension Nozzles for Blowguns

These nozzles and extensions meet OSHA 1910.242(b) directive 100-1 requirement for dead-end pressure. All of them will fit any blowgun with a 1/8″ NPT female air outlet.

(A) Standard Nozzle— This nickel-plated brass nozzle produces a concentrated airstream.

(B) Air Booster Nozzle— Multiple holes in this nozzle increase air volume. Made of nickel-plated brass.

(C) High-Thrust Air-Saver Nozzles— Consume little air while providing high thrust. Aluminum nozzle is 3/4″ dia.; nickel-plated brass is 27/64″ dia.

(D) Air Shield Nozzle— Produces a cone of air around the main airstream to reduce chip and dust blowback. Made of nickel-plated brass.

(E) Flexible Rubber Extension Nozzles— Flexibility and extra length improve access for hard-to-reach areas. Extensions consist of a 17/32″ dia. rubber hose with brass fitting and nozzle. Hose can be bent to any position and will maintain that position until moved.

(F) Rigid Extension Nozzles— Don't overextend yourself; use one of these extensions for jobs where a long reach is needed. They're made of nickel-plated steel and brass.

(G) 8″-32″ Telescoping Extension Nozzle— Has a stainless steel shaft that telescopes for access into hard-to-reach areas. Includes a 5/16″ dia. nozzle.

(H) Self-Retracting Nylon Air Hose with Fittings— Hose stretches and recoils to stay out of the way. It has brass 1/4″ NPT male fittings, rigid on one end and swivel on the other. Maximum working pressure is 170 psi. Coil ID is 3″.

Standard Duty Heat Guns

Fixed Temperature

Adjustable Temperature

Temperature Dial for Adjustable-Temperature Heat Guns

J ***K*** ***L*** ***M***

A comfort-grip handle for hand use and a nonslip rubber-backed base plate for bench-top and table-top use make these versatile guns ideal for a variety of jobs. All guns have a mica-insulated ceramic heating element, a die cast aluminum housing, and a three-position (off/cold/hot) switch. Nozzles are approximately 9″-10″ long with a 1.2″ dia. opening. Temperatures measured 1″ from nozzle tip. Heat guns include a 6-ft. power cord with three-prong plug. Air velocity: 3,000 fpm. Air volume: 23 cfm.

Fixed-Temperature Heat Guns— Have an adjustable shutter to control air volume. Temperature cannot be set.

Adjustable-Temperature Heat Guns— A dial sets the selected temperature making these guns great for heating sensitive materials or any time you require specific temperatures.

120 VAC heat guns are UL listed. *Models 3149K11* and *K12* are also CSA certified.

120 VAC heat gun kits include gun, shrink tube nozzle, 2 1/4″ wide spreader nozzle, 7/8″ dia. reducer nozzle, and case.

230 VAC heat guns have a NEMA 6-15 plug (see page 787 for plug configurations).

Also Available: Heat gun replacement parts. Please ask for 3149K888 and specify part.

Heavy Duty Heat Guns

Durable and long lasting, these heat guns have a ceramic encapsulated heating element, an electronic temperature sensor (unless noted) that prevents the element from burning out, and a dual air intake. They feature a 120°F cool-air setting (except for 3433K74) that's great for drying, cleaning, and cooling. Guns have a cushioned-grip handle (except for 3433K74); a lightweight, impact-resistant plastic housing; and a 1¼″ OD nozzle with a 1″ opening. For hands-free use, place gun in an upright position on a bench or table. Guns operate at 120 VAC and include a 6-ft. power cord with two-prong plug, except where noted. UL listed and CSA certified.

(A) Fixed Temperature and Air Volume— Guns have either two or three temperature settings and the air volume will increase or decrease based on the temperature setting.

(B&C) Adjustable Temperature and Air Volume— *Style B* has a rotary dial for temperature adjustment and a three-step switch for air volume adjustment. *Style C* has an LCD display with digital temperature control that adjusts temperature in 10° increments with the push of a button.

(D&E) Programmable Temperature with Adjustable Air Volume— Guns have a digital temperature control that adjusts temperature in 10° increments with the push of a button. Digital display provides four programmed settings. A lockable override allows temperature to be "locked" so operators cannot change setting. *Style E* ensures safe operation at start-up—if the gun is in the "on" position when plugged in, it won't start until the switch is turned off and then back on. This prevents accidental burns.

Light Duty Heat Guns

A combination of performance and value, these heat guns are great for intermittent use. All have a high-impact plastic housing. Temperatures taken at nozzle tip. Not rated for air velocity. Operate on 120 VAC and include a 6-ft. power cord with three-prong plug. UL and C-UL listed. *Note:* The heating elements are not replaceable.

(T) Pistol-Grip Fixed-Temperature Heat Gun— Has a three-position (off/low/high) switch and hanging ring.

(U) Pistol-Grip Adjustable-Temperature Heat Gun— Has 12 temperature settings, a cool-down setting that automatically turns off the gun, touch-pad control panel with LED indicators, and hanging ring.

(V) Inline-Handle Fixed-Temperature Heat Gun— Has a tapered nozzle that keeps air flow focused and a built-in wire bracket that provides support during bench-top applications. It also has a two-position (on/off) switch.

Nozzle kit for Styles T and U heat guns comes with a ⅝″ dia. pinpoint nozzle, 2″ wide surface nozzle, and 4″ extra-wide scraper nozzle.

Nozzle Kit for Styles T and U Heat Guns

Low-Velocity Heat Guns

Shrink-Tube Nozzle

Pinpoint Nozzle

With an air velocity of 700 fpm, these guns will deliver the heat you need without blowing lightweight items all over your workstation. Guns measure 8⅞″ long and have an impact-resistant plastic housing (unless noted), brushless continuous-duty motor, three-position (off/cool/hot) switch, and 7-ft. power cord with three-prong plug.

They're furnished with a plug-in 650° F mica heating element (unless noted). To change the temperature, simply change the heating element (sold separately at right). Guns, except the 120 VAC ESD-safe gun, also include a 1″ OD shrink-tube nozzle and snap-on stand that holds the gun at a 15° angle for hands-free use. Air volume: 3.8 cfm. Nozzle opening: 1″.

120 VAC gun is UL listed and CSA certified.

120 VAC ESD-safe gun is grounded to eliminate electrostatic discharge and shield against EMI and RFI interference. Gun has a carbon fiber housing. Includes 800° F heating element. UL listed.

220 VAC gun has a NEMA 6-15 plug (see page 787 for plug configurations).

Electronic control with a rotary knob puts precise temperature adjustment at your fingertips, while an air slide or switch allows you to adjust air volume. All guns are double insulated and have a ceramic-reinforced heating element, impact-resistant plastic housing, and two-position (on/off) switch.

(A) The choice for welding thermoplastics, this gun has a removable 3/16″ dia. pinpoint nozzle (Style F) for maximum versatility. It also has built-in protection to safeguard the heating element and electronics against overheating. The air velocity ratings are based on using a 3/16″ dia. nozzle. Includes a 7-ft. power cord with two-prong plug. UL listed.

(B&C) These powerful heat guns have a much larger air volume than Style A, so they can handle your toughest jobs. Include a 7-ft. power cord. Style B includes a two-prong plug. Style C includes a continental European plug.

♣ Must be used with Style F nozzle.

Gentle-Heat Compressed-Air Blower

Generate a gentle flow of heated air that is adjustable up to 250° F. Blower uses filtered compressed air (no electricity) and has no moving parts. It has a portable magnetic base and flexible nozzle—perfect for spot heating in drying, warming, and curing applications. For best results, position nozzle within ½″ to ¾″ of your work surface.

Blower has a maximum air pressure of 150 psi of filtered factory air and permits air volume of 15 cfm. It comes furnished with a 5-micron filter. The tube is 1¾″ Dia.×9⅞″ Lg. Nozzle is 8″ long and has a ⅜″ opening. Air inlet is ¼″ NPT male. Not rated for air velocity. Meets OSHA directive for maximum noise level and outlet pressure.

34555K56 ..... $377.07

High-Heat Compressed-Air Blowers

Flameless hot air up to 1050° F (566° C) makes these blowers ideal for flash deburring plastics, curing laminates, heating materials for die cutting and stamping, and other jobs requiring continuous hot air. Both include an air regulator and pressure gauge, 5-ft. power cord with three-prong plug, and mounting bracket with 17/64″ holes on 2″ centers.

Air pressure: 1,500 watt unit: 1-6 psi; 2,200 watt unit: 1-4 psi. Blower tube is 2″ Dia.×12½″ Lg. Overall blower length is 16″.

Air Velocity, fpm	Air Volume, cfm	VAC	1,500 Watts Amps			2,200 Watts Amps		
3,700	37	120	12.5	8609T11	$765.42	18.3	8609T12	$780.26

Hot Air Blowers

These versatile blowers are designed for hand-held use as well as for bench and machine mounting. Plus, a nonslip rubber-backed base plate allows 90° rotation for multiposition applications. They have a mica heating element (unless noted) that's protected by a thermal fuse, so there's less chance of burnout. They also have a steel housing, three-position (off/cold/hot) switch, and 6-ft. power cord with three-prong plug.

Air volume: 47 cfm. Air velocity: 2,200 fpm. Nozzle opening: 1⅞″. Size: 12″ Lg.×6″ Wd.×9″ Ht. (except for *models* 3308K31 and *K32* which are 9″ Lg.×6″ Wd.×9″ Ht.).

120 VAC blowers are CSA certified (except 3308K33) and UL listed. *Model* 3308K35 comes with a NEMA 5-20 plug (see page 787 for plug configurations).

230 VAC blowers have a NEMA 6-15 plug (see page 787 for plug configurations).

Max. Temp.■	Watts	120 VAC, 60 Hz Amps	Blowers		Repl. Heating Element		230 VAC, 50/60 Hz Amps	Blowers		Repl. Heating Element

High-Volume Low-Heat Blower

Need a lot of air, but not a lot of heat? This blower combines high volume with gentle heat and is adjustable (head pivots 180°) which means you can zero in on an exact spot—perfect for warming and low-heat drying jobs.

Blower operates on 110/120 VAC, 60 Hz and is rated for continuous use. It has a steel and aluminum housing, coil-wound mica heating element, three-position (off/low/high) switch, thermal limit switches, shaded-pole brushless motor for long life, and 8-ft. power cord with three-prong plug. Nozzle opening: 3″. Size: 13″ Lg.×9″ Wd.×18″ Ht.

Maximum Temperature★	Air Velocity, fpm	Air Volume, cfm	Watts	Amps		
105°/140°F	3,850	205	1,800	8/15	3092K97	$430.77

★ Measured at end of nozzle.

Heavy Duty Variable-Temperature Hot Air Blowers

Outstanding for production drying, heating, and heat shrinking applications, these heavy duty blowers are electronically controlled for adjustable heat. They're rated for continuous use and have an air-volume regulator, graduated temperature control, and electronically protected heating element to guard against overload. Plus, the air intake has a replaceable filter to keep debris out of the motor.

Operate on 230 VAC, 50/60 Hz, are double insulated, and have separate on/off switches for the blower and the heating element. Include nylon housing with removable top handle and a 7-ft. two-wire power cord (plug not included; see page 787 for plugs). Nozzle opening: 2⁷⁄₁₆″. Size: 13¾″ Lg.×6¾″ Wd.×3⅞″ Ht.

Also Available: Replacement heating elements. Please ask for 3396K9 and specify blower number.

Max. Temp.♠	Air Velocity, fpm	Air Volume, cfm	Watts	Amps

♠ Measured approximately ¾″ from nozzle.

Propane-Gas Heat-Shrink Blower

Connect this tool to a propane tank for a fast, even heat pattern that's 18″ wide. Excellent for shrink wrapping polyethylene film. Tool has a combustor head that's ventilated to pull air through, so tool and safety guard (included) stay cool. A latch prevents unintentional starts, while releasing the switch on the handle automatically shuts the tool off.

Furnished with a piezo ignitor, 25-ft. hose, set gas regulator with gauge, and steel carrying case. Use this tool with a propane tank (commonly used for plumber's torches, welding apparatus, and camp and trailer stoves). See page 3391 for empty bulk propane tanks and for tank-to-torch adapters. Output: 172,500 Btu/hr. at 22 psi. Propane consumption: 8 lbs./hr. Gas connection: ⁹⁄₁₆″-18 left hand NPT male. Length: 22″ (with safety guard). UL listed.

Max. Temperature✓	Air Velocity✓		
1120°F	2,100 fpm	30975K11	$884.62
Replacement Ignitor		30975K31	117.28

✓ Measured 6″ from nozzle.

High-Velocity Heatless Air Blowers/Vacuums

Cleanups are no sweat when you have the blasting power of one of our heatless blowers. They're great for cleaning machinery and coils, removing dust and debris from large areas, testing air ducts for leaks, and any number of drying applications. The heavy duty construction, including a cast aluminum housing, permanently lubricated sealed precision ball bearings, and baked enamel finish, let these tools stand up to the most demanding situations. All blowers include a detachable nozzle and a 21-ft. power cord with three-prong plug. Nozzle opening: ¾″.

One-speed blowers have a two-position (on/off) switch. *Model* 3144K15 is UL listed.

Two-speed blowers have a three-position (off/low/high) switch. *Model* 3144K35 is UL listed. *Model* 3144K36 has a NEMA 6-15 plug (see page 787 for plug configurations).

Suction cleaning kit converts blowers into hand-held vacuum cleaners. Kit includes dust bag, 4-ft. hose with swivel, 5¼″ long suction nozzle with slide-on brush, 11″ long crevice nozzle, and carrying strap.

Small Parts Spin Dryers

Bench Top Floor

Centrifugal force and a turbine fan allow these dryers to dry your parts in as little as 60 seconds. All are welded steel with separate on/off switches for rotation and heat. Heat is not adjustable; temperature will change based on the amount and type of workpiece in the basket and the length of the operation. An exhaust outlet allows direct connection to a drip pan (not included) or drain. Parts baskets are required (sold separately below). UL recognized.

Bench-Top Dryer— Perfect for small parts. It has a 1/8-hp direct-drive motor that spins at 1,100 rpm. Furnished with a 600-watt heating element and a 9-ft. power cord with three-prong plug.

Floor Dryer— Well suited for larger parts and loads. It has a cover that swivels in either direction for easy loading. A safety interlock turns the motor off when you open the cover, while a foot brake stops the spinning in an instant. Dryer has a 1-hp motor with a V-belt drive that spins at 825 rpm (rotation can be reversed to remove moisture from cup-shaped parts). Furnished with a 4,000-watt heating element. Power cord and plug are not included.

About Infrared Heating

Many factors affect the process of infrared heating, which is also known as radiant heating. These include: the material's ability to conduct, transmit, and absorb heat as well as the material's size (Lg.×Wd.×Thick.); the heater's temperature, radiant efficiency, and size (Lg.×Wd.×Ht.); and the presence of reflectors behind and on the sides of the heater. For heating on a moving line, the material's specific heat and exposure time are also key considerations.

Radiant heat is absorbed by objects, not open space, so infrared heaters are often used when contact between the heat source and the object being heated is not possible (conduction heat) or it's not practical with high-velocity air (convection heat). Applications include: conveyor ovens for drying or curing, removing surface water or absorbed moisture from paper and fabrics, localized heating of large parts or assemblies, and heating conveyor loads of similar parts or materials.

Infrared Quartz-Tube Heaters

Wall and Ceiling Mount

Portable

These heaters have a quartz-tube heating element and corrosion-resistant aluminum alloy reflector to create radiant heat for quick warming, curing, and drying. UL listed.

Note: Do not use in hazardous locations such as enclosed areas exposed to fumes.

Wall and Ceiling Mount— For horizontal mounting both indoors and out. Mounting brackets are included for attachment to walls, ceilings, and plant equipment. When brackets are used, you can tip heaters 60° from center of bracket swivel. You can also hang them from chains or other special brackets (not included). Heaters are insulated and have a wiring box (on top) with inlet hole that accepts standard ½″ conduit. Operating temperature is approximately 1400° F. Size is 8″ Ht.×5¾″ Dp.

Portable— Measuring 36″ Lg.×6″ Wd.×6″ Ht., these heaters move up and down on a sturdy 6-ft. high steel stand which has a 28″×30″ base and four casters. Designed for indoor use, all include a power cord with three-prong plug. Operating temp. range is approximately 1125° to 1325° F. The *2,000-watt heaters* have heads that rotate for use in horizontal and vertical positions. They also have a 60-minute timer with automatic shut-off.

To Order: For all heaters and replacement heating elements, please specify 120, 240, or 480 VAC/VDC where available.

Super-Efficient Infrared Heaters

Three Element Rectangular Round

With twice the efficiency of infrared heaters with metal bodies, these infrared heaters have a nickel-chromium resistance wire embedded in the black-ceramic body that emits radiant energy. Use them for drying, curing, and warming. To use, start 6″-8″ away from the workpiece and adjust distance as needed. All heaters resist corrosion and oxidation. They operate on 220/230 VAC and have a wattage tolerance of ±5%. Components are UL recognized.

Note: Do not use in hazardous locations such as enclosed areas exposed to fumes.

Rectangular heaters have 6″ long electrical leads that are insulated by ceramic beads and a ring terminal that fits a #10 stud. Elements have a parabolic profile and are 9⅝″ Lg.×1 7/16″ Dp.×2⅜″ Ht. Furnished with mounting hardware, reflector, ceramic terminal blocks, and a wired insulated bus bar.

Note: Heaters with 650-watt elements last longer than those with 1,000-watt elements because they have thicker heating element wire and lower operating temperatures.

Round heater has a flat-profile element and is 5″ Dia.×4⅞″ Dp. Furnished with a light-bulb style, screw-in base receptacle and bell-shaped reflector.

Easy-Positioning Drying and Curing Infrared Heaters

With a fully adjustable 42″ long extension arm, these lamps let you put heat exactly where you need it. Use them for drying paint and most other surface coatings and fillers. They are not rated for temperature. All lamps operate on 120 VAC, 60 Hz, 2 amps and have a 250-watt, BR40, 2,000-hour infrared bulb; vented shade; bulb guard; two-position (on/off) switch; and 6-ft. power cord with three-prong plug.

Lamp with Screw-Clamp Bracket— Simply clamp to the edge of a bench or table with a maximum thickness of 2¼″. The bracket is removable so the lamp can be used with the optional bases (sold separately below).

Lamp with Stationary Stand— In addition to a screw-clamp bracket (described above), this lamp has a 40½″ high stand with 15″ dia. pedestal base.

Lamp with Mobile Stand— In addition to a screw-clamp bracket (described above), this lamp has a 38½″ high stand with 24″ dia. base and five casters for mobility.

Lamp with Screw-Clamp Bracket	3349K51	$180.00

Replacement Infrared Bulb	1547K15	15.75

Mobile Drying and Curing Infrared Heater

Casters allow you to take these heaters anywhere. Heater head is 18″ in diameter and can be positioned anywhere along the 6-ft. high steel stand. Stand has a 28″×30″ base and four casters. With seven infrared bulbs (sold separately below) and three switch controls, you choose the amount of heat you need. The first switch controls one bulb, second switch controls two other bulbs, and third switch controls the last four bulbs. Suitable for drying paint, adhesives, and many other surface coatings and fillers. *Note:* Not for use with water-based primers or paint.

Heater operates on 120 VAC/VDC, 50/60 Hz, 1,750 watts, 15 amps. It is not rated for temperature. Includes 6-ft. power cord with three-prong plug. UL listed.

Heat Lamp without Bulbs	3162K5	$187.18
R40 Infrared Bulb (250 watts, 5,000 hrs.)	1547K15	15.75
Replacement Stand	3162K81	92.26

Hand-Held Drying and Curing Heat Lamp

This handy lamp heats, dries, softens, and defrosts while illuminating your work surface. Temperature ranges from 300° F (12″ from the work surface) to 800° F (5″ from the work surface).

Lamp operates on 120 VAC, 60 Hz, 5.4 amps. It has a phenolic housing with aluminum reflector, insulated swivel handle, and two-position (on/off) switch. Furnished with a 600-watt quartz bulb that's rated for 75 hours, a pair of protective glasses, and a 10-ft. power cord with two-prong plug.

Optional stand is 6-ft. high and folds to 39″ for convenient storage.

Replacement Quartz Bulb (600 watts, 75 hours)	3343K17	55.94
Replacement Reflector	3343K21	10.61

Forced-Air Ovens

Also known as mechanical convection ovens, these ovens have a blower to circulate equal amounts of air inside the oven to provide more uniform and accurate temperatures and faster processing than other ovens. An Incoloy-sheathed tubular heating element protects against short circuits. Exhaust is located on top of the oven.

Ovens have a stainless steel interior, stainless steel exterior (unless noted), and wide double doors with silicone-rubber gaskets. Plus, they include an adjustable thermostat, an excess-temperature controller with manual reset, an on/off indicator light, and adjustable nickel-plated wire shelves. Some models also include a 12-hour shutdown timer (see table below).

Ovens are 60 Hz, 1 phase. ***115 VAC*** ovens include a 4-ft. power cord with three-prong plug. ***230 VAC*** ovens do not include a cord or plug and must be hardwired.

Caution: Do not use with flammable solvents, vapors, or other volatile materials.

Standard-capacity ovens have two 20-lb. capacity shelves that adjust on 2″ centers. Ovens hold a maximum of seven shelves. Maximum oven load is 40 lbs.

Large-capacity ovens stand up to the demands of continuous production jobs. They have a separate contactor for controlling the heating element and a safety switch for blower airflow so you can operate blower without heat for cooling applications. Ovens have adjustable fresh-air intake and exhaust dampers as well as explosion-venting latches. They have two 50-lb. capacity shelves that adjust on 3″ centers; ovens hold a maximum of 10 shelves. Maximum oven load is 200 lbs. Meet National Fire Protection Association Standard 86, Industrial Risk Insurers, FM, and OSHA requirements. Side-access control panel is UL listed.

Stands for ovens are steel tables that raise the ovens either 31″ or 24″ off the ground.

Ovens

Also known as gravity convection or laboratory ovens, these units are the best choice when temperature uniformity isn't critical. Through a process known as gravity convection (or natural convection), heat flows from the oven bottom up into the oven chamber and then out through top vents without a blower or fan. Compact, low-watt density, Incoloy-sheathed heating elements provide quick heating and recovery time and protection from short circuits. Temperature accuracy is ±15° F (±8.3° C).

Cabinets have a corrosion-resistant aluminized steel interior, a steel exterior with painted finish, and mineral wool insulation. Ovens have a hydraulic-control thermostat (except 0.7 cu. ft. ovens, which have a bimetal thermostat). Include a thermometer, on/off indicator light, and two 20-lb. capacity chrome-plated wire shelves that adjust on 2″ centers. Operate at 60 Hz, 1 phase and include a power cord with three-prong plug. Control components are UL and CSA recognized.

Caution: Do not use with flammable solvents, vapors, or other volatile materials.

High-Temperature Furnaces

A

B

C

D

E

A&B ***Analog-Control Furnaces—*** Just turn the single-set control dial to the temperature you want. Once reached, the ovens will maintain that temperature. Ovens have a meter-style thermometer that shows the actual temperature in the oven in °F and °C, even with the power off. Include a 6-ft. power cord with three-prong plug.

(A) Small-Capacity Furnaces— Energy efficient furnaces have steel and stainless steel housings, ceramic brick heating plates, and aluminum and silicone oxide fiber insulation. Door lifts vertically. Operate at 50/60 Hz, single phase.

(B) Large-Capacity Furnace— The large work space handles more material and higher temperatures. Housing is stainless steel and has 3″ of firebrick insulation and 1″ of fiberboard in the walls to provide rapid heating. Heating elements are protected in recessed sidewall grooves. Swing-open door. Operates at 60 Hz, single phase.

C-E ***Digital and Digital Programmable-Control Bench-Top Furnaces—*** These cost- and energy-efficient furnaces are temperature controlled by push-button digital electronics. All operate at 50/60 Hz, single phase and include a 6-ft. power cord with three-prong plug.

(C) Small-Capacity Digital Furnaces— Have a single set-point digital controller. An LED display continuously shows work space temperature in °C (press the set button to display the set-point temperature). An indicator light stays on while the furnace warms up and flashes when it reaches the set temperature. Furnaces are rated for continuous temperatures up to 1800° F (982° C) and for intermittent use (under three hours) up to 2000° F (1093° C). A safety switch shuts off power to the heating elements if the door is opened. Furnaces have a welded steel housing and ceramic fiber insulation. Drop down door doubles as shelf for loading and unloading.

(D) Small-Capacity Digital Programmable-Control Furnaces— These furnaces allow you to build programs in three stages to manage time, temperature, and rate of temperature change. You can link two three-stage programs for a six-stage operation. A maximum of 10 programs can be stored in the memory with up to a seven-day delay start time for each program. An LCD display shows chamber temperature, countdown time, and program number. Furnace has six programmable parameters: 1) delay start, 2) heat/cool rate, 3) target temperature, 4) temperature timer, 5) memory to retrieve programs if oven is turned off, and 6) °C/°F digital display. Door lifts vertically.

(E) Large-Capacity Digital Programmable-Control Furnace— Uses the same controls as Style D, but has more than three times the working space (1,750 cu. in.). It includes a ceramic shelf that effectively doubles the capacity for small items. Door lifts vertically.

Caution: Do not use with flammable solvents, vapors, or other volatile materials.

Also Available: Replacement parts and heating elements for all of the furnaces listed. When ordering, please ask for the furnace part number listed in the table below, and specify the replacement part or heating element needed.

	Working Space, cu. in.	Temp. Range °F	Temp. Range °C	Temp. Accuracy °F	Temp. Accuracy °C	Chamber Size, Ht.×Wd.×Dp.	Overall Size, Ht.×Wd.×Dp.	Watts	Amps	VAC

Heat-Treating Compounds

Use these compounds to create a hard-wearing surface on steel. All compounds come in a powder form, except where noted.

Surface-Hardening Compound— Produces a hard-wearing surface on plain-carbon and low-alloy steel parts being heat-treated at 1650°-1700° F (899°-927° C). To use, sprinkle the compound over the heated part, heat again, and quench.

Pack-In Carburizer Compound— Rapidly forms a very dense, wear-hardening shell on all types of mild carbon steel for increased tensile strength. Designed for maximum efficiency at 1450° to 1750° F (788°-954° C), unless noted. Requires a tightly sealed steel or ceramic vented container able to withstand 1750° F (954° C) or the furnace temperature. *100-lb. drum* comes in grain form and is designed for maximum efficiency at 1500° to 1750° F (816°-954° C).

Melting Pots and Tanks

The bottom and sidewalls of these pots and tanks have wraparound heating elements to ensure uniform heating and fast heat-up time. All units have a variable temperature range with adjustable thermostat control and "power on" indicator light. Melting pots with a ±25° F temperature accuracy have a control dial marked from 1 to 10; melting pots with a ±12.6° F temperature accuracy have a control dial marked from the lowest temperature to the highest temperature in its range. Outer housing is Type 304 stainless steel. All operate on 120 VAC, 50/60 Hz, single phase and include a 6-ft. power cord with three-prong plug, unless noted.

Note: Always wear safety apparatus and follow safety precautions while working with melting pots and tanks. Never operate them unattended. Pots and tanks cannot be used for melting salts.

Low-Heat Melting Pots and Tanks— Melt strippable hot-melt coatings, adhesives, waxes, resins, tar, and asphalt. Pots have fiberglass insulation (3″ thick in round pots; 2″ thick in rectangular tanks) and a cast aluminum liner for fast, even heat transfer. *Round pots* include an aluminum cover. *Rectangular tanks* have a Type 304 stainless steel cover. Do not use these pots and tanks with cerro alloys, acids, or other materials caustic to or incompatible with aluminum.

High-Heat Melting Pots and Tanks— Melt solder, tin, babbitt, and lead. Inner bowl is cast iron and has 2″ of refractory (heat-resistant) insulation. Pots and tanks do not include covers.

Low Heat Round

Low Heat Rectangular

Also Available: 220 VAC pots and tanks. Please ask for 3233K91 and specify pot style and capacity.

● Operates on 220 VAC and has a 6-ft. 3-wire power cord (plug not included—see page 787 for NEMA plugs).

Precise-Temperature Melting Pots

Get precise temperature control with these digitally controlled melting pots. Simply set the specific temperature you want—the LED display shows the set temperature and the actual current temperature. Use to melt solder, wax, or plastic for dipping applications. Choose pots with a standard cast iron crucible or with a ceramic-coated one for lead-free applications. Because solder and other materials will not stick to the ceramic-coated crucible it is easy to clean and allows you to use both lead-free and leaded solder. All operate on 120 VAC, 50/60 Hz and include a 6½-ft. power cord with three-prong plug.

Round Crucible

Melting Pots for Solder and Lead

Styles A-C— Made of cast iron, pots are ideal for tinning, stripping, and dip soldering. All operate on 120 VAC, 50/60 Hz and include a 6-ft. power cord with three-prong plug. Not for use with flux core solder. *Style A* pots are set to a fixed temperature of 750° F (399° C). *Styles B* and *C* pots have an adjustable thermostat control that lets you select the optimum working temperature.

Style D— Perfect for melting lead. A pour spout on the bottom of the pot makes draining melted material even easier. Plus, there's 4″ of clearance below the pour spout to place molds. Melting time is less than 20 minutes. Housing is aluminum and inner pot is steel. Operate on 50/60 Hz. 3429K41 operates on 110 VAC and includes a 6-ft. power cord with two-prong plug. 3429K42 operates on 220 VAC. It includes a 6-ft. 3-wire power cord (plug not included—see page 787 for NEMA plugs).

■ Pot is square for dipping small assemblies and through-hole circuit boards.

Melting Pots for Lead-Free Solder

A porcelain-coated pot prevents solder from sticking, making these pots easy to clean and long lasting. The nonporous, nonstick porcelain coating also allows you to use both lead-free and leaded solder. Pots have a 2-lb. capacity. Inside pot size is 2½″ Dia. × 1½″ Dp. All are ESD protected; operate on 120 VAC, 60 Hz; and include a 5½-ft. power cord with three-prong plug.

Temp. Range °F	Temp. Range °C	Temp. Accuracy °F	Temp. Accuracy °C	Watts		
500°- 975°	260°-524°	±11°	±6°	350	8559T11	$448.46
500°-1100°	260°-593°	±11°	±6°	500	8559T21	466.41

Cast Iron Melting Pots

Without Pouring Lip

With Pouring Lip

Built for melting lead, solder, and babbitt, these melting pots have a round, cast iron bowl and a steel handle. Maximum temperature is 1800° F (982° C).

Pots with pouring lip also have a lifting eye with a hook-hole that provides support while tilting the pot.

Pot Cap.	Load Cap.	Inside Size, Dia. ♦ × Dp.		
Pots without Pouring Lip				
1 qt.	10 lbs.	4¾″ × 2¼″	3355K32	$52.64
1.35 qt.	20 lbs.	5¾″ × 3½″	3355K33	79.04
2 qt.	35 lbs.	7¼″ × 4″	3355K35	99.74
1.25 gal.	110 lbs.	9¾″ × 5¾″	3355K37	150.00
Pots with Pouring Lip				
1.25 gal.	110 lbs.	10¾″ × 5¾″	3355K43	161.57
2 gal.	175 lbs.	12¼″ × 7½″	3355K38	233.75
4.5 gal.	300 lbs.	14¾″ × 9½″	3355K41	553.57

♦ Measured at top (widest point) with lip if applicable.

Constant-Heat Melting Pots for Glue

A thermostat automatically maintains the temperature within a few degrees of 140° to 150° F (60° to 66° C) preventing overheating and underheating. Temperature accuracy is ±2° F (±1° C). Pots have steel exteriors, aluminum interiors, and a removable glue container. *1-* and *2-quart* pots also include a built-in wiper rod for removing glue from brushes. All operate on 115 VAC, 60 Hz and include a 6-ft. power cord with three-prong plug.

Pot Cap.	Inside Size, Dia. × Dp.	Watts	Glue Pots		Repl. Container	
1 qt.	4⅜″ × 4⅛″	144	3344K11	$153.60	3344K22	$66.25
2 qt.	5½″ × 4⅞″	240	3344K12	199.02	3344K23	94.53
4 qt.	6¾″ × 6½″	362	3344K13	276.12	3344K24	151.41

Crucibles

Made of clay-bonded graphite, these crucibles hold up against wear and thermal shock. They're also glazed to resist oxidation and have a molded-in pouring lip. Crucibles are ideal for melting brass, aluminum, copper, and precious metals. Maximum temperature is 2500° F.

Crucible No.	Cap., Red Brass	Size, OD★ × Ht.		
0000	1 lb.	2⅝″ × 3 1/16″	3226K51	$22.00

10	32 lbs.	6⅝″ × 8⅛″	3226K11	70.00
16	47 lbs.	7⅜″ × 9 5/16″	3226K12	86.00
30	95 lbs.	9⅜″ × 11½″	3226K14	128.00

★ Measured at widest point (at top for 0000-6; in middle for 10-30).

Hot Plates

These general purpose hot plates work with all types of metal pans. They have individually controlled, coiled-element burners that lift up for easy cleaning. Housing is chrome-plated, seamless steel. Do not use for high-temperature heat treating of metals and solids. Hot plates operate on 120 VAC, 60 Hz and have a "power" indicator light. They come furnished with a 4-ft. power cord with three-prong plug. UL listed and NSF certified.

No. of Burners	Burner Dia.	Load Cap., lbs.	Temp. Range, °F	Temp. Accuracy, °F	Approx. Heat-Up Time	Overall Size, Ht. × Wd. × Dp.	Watts	Amps		
1	5½″	15	0°-475°	±20°	3 min.	3½″ × 11½″ × 11½″	1,100	9	3118K32	$113.04
2	5½″	15	0°-475°	±20°	3 min.	3½″ × 17½″ × 11½″	825/825	13.8	3118K34	171.32

Uniform-Heat Hot Plates

A

B

C

D

Made of aluminum to provide the most uniform temperatures, these hot plates also resist warping and buckling at low temperatures. Hot plates have a "power on" indicator light and 6-ft. power cord with three-prong plug, unless noted. Also include internal thermostat that monitors the heating surface. Housing is stainless steel. We recommend using glass containers; metal containers and sand baths should not be used. Metal foil or metal containers prevent the normal dissipation of heat. This may cause damage to the top plate.

(A) Compact hot plates are an economical choice when work space is tight. The housing is perforated so air circulates to protect the controls and work surface from excess heat. Do not have a "power on" indicator light. *120 VAC* unit has a 3-ft. power cord.

(B) General purpose hot plates are good for everyday lab work. *120 VAC* unit is UL listed.

(C) Large-capacity hot plates have a larger surface area and twice the load capacity of our general purpose plates. UL and C-UL listed.

(D) Heavy-load hot plates have supporting stainless steel rails on the bottom and an even larger surface area than our large-capacity hot plates. Ideal for heating assemblies, soldering, and glassmaking. ETL Testing Laboratories listed for conformance to ANSI/UL-499.

	Top Plate, Wd. × Dp.	Load Cap., lbs.	Temp. Range °F	Temp. Range °C	Temp. Accuracy °F	Temp. Accuracy °C	Approx. Heat-Up Time	Ht.	Watts	120 VAC, 50/60 Hz Amps			240 VAC, 50/60 Hz Amps

Precise-Temperature Hot Plates and Hot Plates/Stirrers

Hot Plate

Digital display shows temperatures in 5° C increments providing precise temperature control for heating and drying jobs. Seamless ceramic tops stay flat at high temperatures for optimal heat transfer. Plus, they clean easily, resist acids and alkalies, and have a drip edge that protects the units from spills. Hot surface warning light protects against accidental burns.

Choose hot plates for heating or hot plates/stirrers for heating and stirring. We recommend using glass or metal containers to prevent damage to the ceramic tops; sand baths are not recommended. Keep top clean and remove spills promptly as acids and alkalies may damage top and cause unit failures. Units have a durable cast aluminum housing and a built-in ring stand holder that accommodates a ½″ dia. support rod (rod not included). Operate on 120 VAC, 50/60 Hz, and include a 6-ft. power cord with three-prong plug. All are CSA certified. ***Hot plates/stirrers*** have a strong magnet for stirring viscous solutions. They also have separate controls for heat and stirring. Stirring speed is 50-1,200 rpm.

Magnetic Stir Bars

Octagonal *Round* *Stir Bar Retriever*

Made with an Alnico 5 magnet encapsulated in a seamless PTFE shell, these stir bars are noncontaminating and resist corrosion, chemicals, heat, and cold. FDA compliant for food contact.

Octagonal bars with spinning ring spin well in small, flat-shaped containers because they have a larger surface area for greater turbulence.

Color-coded octagonal bars with spinning ring are easy to see in contrasting colored liquid. They spin well in small, flat-shaped containers. **To Order:** Please specify color: red, yellow, or blue.

Round bars with removable spinning ring can be used ringless to stir up contents at the bottom of larger containers. They have excellent centering and smooth-running characteristics.

Retriever has a magnet at one end for fishing stir bars out of containers. It's PTFE coated. Length is 13″.

Natural-Gas Burners

Single Row *Triple Row* *Rectangular*

Say goodbye to hot spots because you'll get even heat distribution with these burners. Burner design allows plenty of air to reach the burners for efficiency. All are made of cast iron.

Ring Burners— Each ring has two rows of gas ports as well as a separate venturi mixer and brass valve. Gas connection is NPT male. *Single-row model* has a built-in floor flange. *Double-* and *triple-row models* have a manifold for connecting to the gas supply line.

Rectangular Burners— Have a venturi mixer. 3318K14 has a brass valve and 3318K16 has a bronze valve. You can elevate burner height by replacing the included NPT nipple with a longer nipple between the elbow and the burner head. Gas connection is NPT female.

LP Gas Burners

Designed for outdoor use, these powerful low-pressure burners are made of 1/4″ thick cast iron for durability and long service life. Burners have 3/8″ male flare fittings and include three push turn control knobs for each burner. All are set for use with LP gas. Assembly required.

Optional 5-ft. hose has a low-pressure LP gas regulator with a 3/8″ female flare fitting on one end, and either a POL or a QCC end fitting on the other end.

Optional natural gas manifolds convert burners to natural gas.

High-Velocity Natural Gas Burners

Straight Burner

90° Angle Burner

Also known as venturi nozzles, these cast iron nozzles burn natural gas at atmospheric pressure in limited combustion chambers even with minimal secondary air. Designed to resist flashback, they can be safely turned down.

Use for drying, air heating, annealing, and melting soft metals. Also use them in heat-treating furnaces, in bake and core ovens, under electrotype furnaces, and in the conversion of large steam boilers. As a torch, they're suitable for singeing and heating. All burners have a venturi mixer and bronze valve, except as noted. Gas connection is NPT female.

★ Has brass valve.

Gas Mixers and Valves

Pair mixers and valves to supply the right amount of natural or LP gas to your atmospheric burners. To choose the correct mixer and valve, determine the size of your burner pipe and gas input connection. For information about measuring pipe, see pages 2-3. If your gas line isn't the same size as the gas input connection, see our index for pipe adapters.

Mixers are made of heavy cast iron and have large, easy-to-adjust air openings. They slip over the burner pipe's end and attach with a set screw (included).

Mixing valves are brass and have a pilot hole. (You can easily drill the pilot hole larger to meet BTU requirements.) One end of the valve slips into the mixer; the other connects to your gas line.

Drilled-Pipe Gas Burners

All of these rugged iron-pipe burners have two rows of gas ports that are precision-drilled at 45° angles. They're good for use in ovens, sterilizers, vats, and tanks. Furnished with a gas mixer and brass valve. Gas connection is NPT male.

To Order: Please specify natural or LP gas orifice.

Stainless Steel Cleaning and Restoring Pen

Easily clean weld-burns from stainless steel with this electrolytic pen that uses an electric current to chemically change the surface. Use instead of abrasives, pickling pastes, and gels, which are time consuming, labor intensive, and not very cost effective. Plus, pen forms a protective coating on the surface as it cleans. Pen uses *100 mL disposable electrolyte cartridges* (required, sold separately below) with cleaning tip and can be used for food service, restaurant, and piping applications.

The system is portable and ideal for small jobs, touch ups, and repairs. Includes one regular stainless steel insert with cleaning pad, one narrow stainless steel insert with cleaning pad, cleaning boot, hex key, grounded clamp, and case. System operates on 120 VAC, 50/60 Hz and includes an 8-ft. power cord with three-prong plug. Measures 81/4″ Ht. × 31/4″ Wd. × 63/4″ Dp.

Electrolyte solution neutralizer (sold separately below) is used to remove the electrolyte solution once cleaning is complete.

System	8910T22	$1,772.84

Electroplating Pen Kit

Pen Repl. Anode Handles

Portable and completely self-contained, this electroplating system is excellent for repairing printed circuit boards, electronic components, and lab instruments, as well as for general plating applications.

Kit includes 1 oz. each of liquid 24K gold, sterling silver, copper plating, alkaline copper, brass, and nickel. Also furnished with 1 oz. each of dulling compound and stainless steel plate, 4 oz. of chrome stripper, a plating pen, two anode handles, pair of gloves, spray bottle, and instructions. The plating pen plates metal at a thickness of 1.5-2 microns per pass (up to 20 microns); it includes three 1/8″ dia. tips. Anodes have washable covers and plate at a thickness of 4 microns. Using the anodes, plating can be built up to 50-60 microns. Operates on 120 VAC, 50/60 Hz, single phase and includes a power cord with two-prong plug. The power supply is UL listed.

Stainless Steel Cleaning and Restoring Gel

Also known as pickling gel, this gel safely removes weld scale, discoloration, and black oxides and other impurities from stainless steel without damage. Also restores the corrosion-resistant chromium layer to stainless steel. Apply gel directly to surface; no mixing required.

1-Quart Jar	8554T11	$57.91
1-Gallon Jar	8554T21	120.87

Compact Dry Heat Sterilizers

Sterilize small instruments safely and effectively. These sterilizers ensure instruments are free of pathogens (agents that cause disease) and microbial contaminants without using chemicals, gases, or flames.

To sterilize, place instruments into the glass beads contained in the sterilizer well. Temperature is set at 482° F (250° C) and requires 20 minutes to warm up. Complete sterilization occurs in about 20 seconds. Both include a bag of glass beads, well cover, and sterilization dish. Operate on 110 VAC, 60 Hz, 90 watts and include a 6-ft. power cord with three-prong plug.

Precision-Tip Picks

Use these needle-sharp picks for precision work around delicate circuits and components. Similar to dental instruments, they have wire tips that are nonrusting and noncontaminating. Handles are hex shaped for a good grip.

With Cushion Grip

Specially designed for microelectronics and micro-assembly, these tweezers have a smooth grip and smooth inside tips.

Premium Swiss grade are top quality Swiss-made tweezers, crafted for perfect tip symmetry.

High grade are high-quality precision tweezers at an economical price.

Steel— Low corrosion resistance but excellent tip wear resistance. Tweezers are magnetic and have a polished finish, except 5669A81-A87 have a dull finish.

400 Series Stainless Steel— Excellent corrosion resistance and good tip wear resistance. Tweezers are magnetic and have a polished finish.

Nonmagnetic 300 Series Stainless Steel— Excellent corrosion resistance and fair tip wear resistance. *Premium Swiss-grade* tweezers have a polished finish. *High-grade* tweezers have a dull finish.

Nonmagnetic Cushion-Grip 300 Series Stainless Steel— Excellent corrosion resistance and good tip wear resistance. They have an ergonomic antistatic foam grip and a polished finish.

Nonmagnetic Titanium— High corrosion resistance is combined with superior tip wear resistance and strength for extreme durability. These tweezers are also lightweight and have a dull finish.

6-Piece High-Grade Nonmagnetic 300 Series Stainless Steel Set— Includes one each of 8384A45, 5669A13, 5669A12, 5669A1, 5669A23, and 5669A9. Comes in a plastic pouch.

5669A26 ..... **Set** $31.27

4-Piece High-Grade Steel Set— Includes one each of 8384A41, 5669A31, 5669A2, and 5669A8. Comes in a plastic pouch.

5669A93 ..... **Set** $19.21

Squeeze-to-Open Tweezers

Fine

Square

Round Blunt

Bent Blunt

Once clamped on a part, these 400 series stainless steel tweezers won't let go. Squeeze to open jaws then put to work in fine assembly and soldering. All have a polished finish.

Fine and ***square*** tweezers have a smooth grip and serrated inside tips.

Round blunt and ***bent blunt*** tweezers have a smooth, heat-resistant fiber grip and smooth inside tips.

Tip	Lg.		Each
Fine	4½″	5799A12	$4.42
Square	6½″	5799A14	5.35
Round Blunt	6½″	7007A73	5.11
Bent Blunt	6½″	7007A74	5.11

4-Piece Set— Includes one each of tweezers sold above. Comes in a plastic pouch.

7007A81 ..... **Set** $18.20

General Purpose Tweezers

Fine-tip tweezers are polished 400 series stainless steel with a serrated grip, except for 5498A18 and 5498A19, which have a smooth grip.

Fine-tip tweezers with comfort grip are 300 series stainless steel.

Fine-tip tweezer with comfort grip and light is made of steel.

Blunt-tip and ***extra-long blunt-tip tweezers*** are 400 series stainless steel with a serrated grip, except 4937A11 and 4937A12, which are aluminum with a smooth grip, and 5498A15, which has a smooth grip.

Blunt-tip tweezers with comfort grip and light are steel.

5498A25 ..... **Set** $23.75

Tongs

Strong enough for heavy production work, yet light enough to reduce fatigue. All have a plain finish.

Hinged-tip jaws open ½″ back from the point.

Nonmarring curved jaws are plastic coated.

Bent-tip jaws and ***nonstick bent-tip jaws*** are noncontaminating (after autoclaving) and inert to most chemicals. All tips have a 30° bend. A second gripping area behind the tips is 1″-1½″ long with an opening of 3¼″ for the 9″ long tongs; 4¼″ for the 18″ long tongs. *Nonstick bent-tip jaws* are PTFE coated.

Magnetic Retrievers

Quickly get a hold of screws, nuts, bolts, and other small items.

Pocket Style

Slip these retrievers into your pocket for go-anywhere convenience. 5838A24 has a polypropylene body. 5838A14 has an aluminum body.

Length	Approx. Pull, lbs.	Tip Dia.	Max. Temp.		
6″	3/8	0.189″	250° F	5838A24	$3.89
6″	1 1/2	0.315″	175° F	5838A14	7.09

Flexible

The shaft bends to reach items in awkward spots.

Stay-Put with Plunger Handle— Push the plunger to engage magnet.

Flexible/Stiff Combination— This rigid, 18″ long tool converts to a flexible, 32″ long tool—just remove the stiff wire section inside the tool and thread it onto the handle.

Length	Approx. Pull, lbs.	Tip Dia.	Max. Temp.

Telescoping

Standard and High-Visibility Orange

With Protective Cap

With Lighted End

Extend these retrievers for hard-to-reach items.

With Protective Cap— The cap covers the sides of the magnet, allowing you to pinpoint the object you want to retrieve. If you want the entire magnet to attract metal, slide the cap up the shaft. Approximate pull is measured with the cap in place. 3835A26 also has an inspection mirror.

Length	Approx. Pull, lbs.	Tip Dia.	Max. Temp.

Gripping Retrievers

Reach objects with less stretching and bending.

Style A— Have rubber cups that grip and jaws that lock to hold objects.

Style B— Have an extra-sturdy construction and curved rubber-padded jaws.

Style C— 7294A3 and *A4* have vinyl-covered jaw tips.

Style D— Upper jaw is smooth and the lower jaw is serrated.

Style E— Shaft is flexible and bounces back after you bend it, except 5681A22, which has a rigid shaft. 5681A15 has a lighted end.

Style F— Shaft is flexible and stays put where you bend it. Also has a lighted end.

Pole-Style Retrievers

You don't have to get up close and personal with these retrievers—their long lengths allow you to reach objects that are farther away.

Pointed Tip—Tip is steel.

Pike Poles—Tip and hook are steel. *Fiberglass handles* are non-conductive and flame resistant.

Hook—Hook is Type 304 stainless steel. 5918A1 length adjusts anywhere within the range listed; 5918A11 and *A12* lengths adjust to three stop positions.

Hinged Hook—Also known as cant hooks. Head is iron with a hinged steel hook.

Noose—The plastic-coated cable opens to approximately 14″ and locks in place once tightened.

Pliers Sets

All-Purpose Pliers Sets

Forged Steel

High Visibility

5-Piece Premium Forged Steel Set—Pliers are forged steel with cushion-grip handles. Packed in a roll-up vinyl pouch. Set includes:

- 7½″ long-nose pliers with cutter
- 6″ combination jaw slip-joint pliers with cutter
- 7″ wire-cutting pliers
- 9½″ tongue-and-groove pliers with flat jaws
- 12″ tongue-and-groove pliers with flat jaws

5671A21 ..... **Set** $89.16

5-Piece Economy Forged Steel Set—Pliers are made of forged steel and have cushion-grip handles. Packed in a vinyl pouch. Set includes:

- 6″ long-nose pliers with cutter
- 6″ combination jaw slip-joint pliers with cutter
- 6″ wire-cutting pliers
- 10″ tongue-and-groove pliers with flat jaws
- 12″ tongue-and-groove pliers with flat jaws

5797A32 ..... **Set** $38.40

5-Piece Type 420 Stainless Steel Set—Pliers are made of Type 420 stainless steel for good corrosion resistance. All have plain handles and are autoclavable for sterile environments. Packed in a roll-up vinyl pouch. Set includes:

- 6″ long-nose pliers with cutter
- 6″ combination jaw slip-joint pliers without cutter
- 8″ wire gripping and cutting pliers
- 6″ wire-cutting pliers
- 9½″ tongue-and-groove pliers with flat jaws

5671A22 ..... **Set** $147.33

4-Piece High Visibility Set—Pliers are made of forged steel and have cushion-grip handles. Grips are neon colored for easy identification. Packed in a roll-up cloth pouch. Each set includes:

- 6″ long-nose pliers
- 6″ combination jaw slip-joint pliers with cutter
- 6″ wire-cutting pliers
- 10″ tongue-and-groove pliers with flat jaws

Grip Color		Set
Orange	**5451A12**	$48.88
Green	**5451A15**	48.88
Red	**5451A19**	$48.88

5-Piece Pliers Set with Adjustable Wrench

Pliers are made of forged steel and have cushion-grip handles. Packed in a roll-up vinyl pouch. Set includes:

- 6″ long-nose pliers
- 6″ combination jaw slip-joint pliers with cutter
- 6″ wire-cutting pliers
- 9½″ tongue-and-groove pliers with flat jaws
- 8″ adjustable wrench

5755A88 ..... **Set** $68.97

3-Piece Insulated Pliers Set

Pliers comply with IEC 60900 and ASTM F1505-01 standards and are rated to 1,000 volts. All are forged steel and have ultra-grip handles, which have grips made of both hard and soft materials for a more comfortable grip than cushion grips. Packed in a polyester and vinyl pouch that has a belt loop and swivel hammer loop. Set includes:

- 8″ long-nose pliers with cutter
- 8″ wire gripping and cutting pliers with pipe grip
- 6″ wire-cutting pliers

5487A65 ..... **Set** $182.35

6-Piece Miniature Electronics Pliers Sets

Zippered Vinyl Pouch

All pliers have a spring return.

Regular Sets—Pliers have cushion-grip handles. *Forged steel* set is packed in a zippered vinyl pouch. *Type 420 stainless steel* set has good corrosion resistance and is packed in a roll-up vinyl pouch.

Static-Dissipative (ESD-Safe) Set—Cushion grips dissipate electrostatic charges to protect sensitive electronic components. Comes in a zippered vinyl pouch.

Each set includes:

- 4½″ long-nose pliers
- 4¾″ long-nose pliers with cutter
- 5¾″ long-nose pliers
- 4¾″ flat-nose pliers (4½″ for Type 420 stainless steel pliers)
- 4¼″ wire-cutting pliers (4½″ for Type 420 stainless steel pliers)
- 4½″ end-cutting pliers

	Material		Set

Tongue-and-Groove Pliers

Flat Jaw with Plain Handles

Curved Jaw with Insulated Handles

V-Jaw with Ultra-Grip Handles

Parrot Jaw with Cushion-Grip Handles

Lock the sliding top handle into one of the curved grooves for a strong, nonslip hold. All pliers have serrated jaws, unless noted.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with high-visibility handles*** have neon-colored grips for easy identification. Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. They also have finger guards to keep your fingers away from the jaws. Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

Thin-Profile Flat Jaw— Nose is narrow and thin for tight spaces.

Flat Jaw— *Type 420 stainless steel* pliers have good corrosion resistance and are autoclavable for sterile environments.

Curved Jaw— Ideal for round stock and tubing. *Brass* pliers have softer jaws than steel pliers and will not mar your workpiece.

V-Jaw— Have more points of contact for a better grip on round and irregular workpieces.

Parrot Jaw— Bottom jaw is shorter than the top to get a good grip on the flats of bolt heads and nuts, even those with rounded edges.

5637A72 ..... **Per Set** $31.95

Adjustable Self-Gripping Pliers

Standard with Cushion-Grip Handles

Standard with Insulated Handles

Locking with Push Button, V-Jaw, Cushion-Grip Handles

Locking w/Push Button, Parrot Jaw

Locking with Slide Button

Locking with Push Button and Ratchet Action

Get the gripping power of a pipe wrench while keeping the feel of pliers. Also known as alligator and cobra pliers, these tools are self-gripping; you don't have to squeeze the handles together as you apply downward pressure. The greater the resistance, the tighter the hold. Made of forged steel, pliers have thin-profile serrated jaws (unless noted). A safety stop keeps your fingers from getting pinched between the handles. Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

Standard— Slide the top handle and lock it into one of the holding positions. Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts.

Locking with Push Button— Push and hold the button, adjust the jaws, then release the button to lock the jaws in position.

Locking with Slide Button— Slide and hold the button, adjust the jaws, then release the button to lock the jaws in position.

Locking with Push Button and Ratchet Action— Same as push-button pliers, but have ratcheting action. Designed to provide 10 times the leverage of standard pliers. All have smooth nonmarring jaws (no serrations). The bottom jaw remains parallel to top jaw at all times.

V-Jaw— Have more points of contact for a better grip on round and irregular workpieces.

Parrot Jaw— Have smooth jaws (no serrations) that will not mar objects. Bottom jaw is shorter than the top to get a good grip on the flats of bolt heads and nuts, even those with rounded edges.

Self-Adjusting Pliers

Tackle different-size workpieces with ease. Just squeeze the handle on these pliers and the serrated jaws automatically adjust to fit your object, providing a secure hold. These pliers are also self-gripping; you don't have to squeeze the handles together as you apply downward pressure. Made of laminated steel with cushion-grip handles.

Use *V-jaw* pliers to hold hex nuts and irregular shapes.

Soft-Jaw Adjustable Pliers

With Nylon Insert Pads

With Urethane Insert Pads — *With Slip-On Urethane Caps*

Pliers have replaceable pads or caps on their jaws to protect delicate materials from marring. Use for plastic pipe, glass, ceramics, electrical connectors, and tubing. Handles have cushion grips.

Pliers ***with nylon insert pads*** have a spring-loaded mechanism that automatically opens jaws. Good for use on irregular shapes.

Adjustable Pliers for Plastic Pipe

The jaws are circular to grip PVC, CPVC, and other plastic pipe without scratching. Jaws are serrated. Made of chrome-plated forged steel with cushion-grip handles.

O'all Lg.	Max. Jaw Opening	No. of Positions		Each
9″	2 1/2″	4	5465A19	$35.95

Double Pipe-Grip Pliers

Fit a range of pipe sizes with one tool—jaws have small and large pipe grips. The round nose gets into tight spaces, especially when you're working on burners and gas pipe fittings. Made of forged steel with plain handles.

O'all Lg.	Jaw Lg.	Pipe Size Min.	Pipe Size Max.		Each
10″	2 1/8″	5/16″	1 1/2″	5622A3	$30.88

Combination Jaw Slip-Joint Pliers

Standard Duty w/Plain Handles

Standard Duty w/ Static-Dissipative Handles

Standard Duty Bent Thin Nose (30° Angle)

Heavy Duty w/ Cushion-Grip Handles

Heavy Duty Side Cutting

A good all-purpose choice, pliers have a slip-joint design, serrated jaws, and a built-in wire cutter, unless stated otherwise.

Standard Duty—*Type 420 stainless steel* pliers have good corrosion resistance and can be autoclaved for sterile environments. *Brass* pliers have softer jaws than steel pliers and will not mar your workpiece. Pliers *with high-visibility cushion-grip handles* have neon-colored grips for easy identification. Pliers *with static-dissipative (ESD-safe) handles* have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. *Straight thin-nose* pliers and *bent thin-nose (30° angle)* pliers reach into confined areas where other pliers won't fit.

Heavy Duty—More rugged than standard duty pliers. *Side-cutting* pliers have a sharp, 7/16″ long edge that acts as a wire cutter.

Wire Gripping and Cutting Pliers

A General Purpose w/Cushion-Grip Handles

B

C General Purpose

D With Insulated Cushion-Grip Handles

Choose these strong, durable pliers for gripping and cutting electrical wiring. Also known as lineman's and side-cutting pliers, tools are made of forged steel (unless indicated otherwise) and have serrated jaws.

Pliers ***with ultra-grip handles*** have special grips made of both hard and soft materials to provide a more comfortable grip than cushion grips.

High Leverage— The joint rivets are closer to the cutting edges to provide more cutting power than general purpose pliers.

Ultra Cutters— Can cut through steel-reinforced wire (ACSR), hardened wire, and nails.

High Leverage with Ultra Cutters— Same as high leverage pliers above, plus cutters that can cut through steel-reinforced wire (ACSR), hardened wire, and nails.

Insulated Handles with Steel Cutting Inserts— Made entirely of composite material, pliers are lightweight and noncorrosive. They comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts.

Insulated Cushion-Grip Handles— Comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. All have finger guards to prevent contact with the jaws.

Long-Reach Wire Gripping and Cutting Pliers

Handles are long so jaws can grip, twist, and cut in areas normally out of reach. The joint rivet is located closer to the cutting edges to provide more cutting power than standard side-cutting pliers. Jaws have 1/4″ long serrated grippers and 3/8″ long cutting edges. Made of forged steel with cushion-grip handles.

O'all Lg.	Jaw Lg.		Each
11″	55/64″	57205A23	$31.76

End-Cutting Long-Nose Pliers

The cutting edges extend all the way across the tip of the nose for close, semiflush cutting. Also called end cutters, these pliers are well-suited for use on circuit boards and other delicate electronics. Made of forged steel with cushion-grip handles.

O'all Lg.	Jaw Lg.	Tip Thick. (A)	Tip Wd. (B)	Max. Wire Size, AWG (Dia.)		Each

Interchangeable-Head Plier Set

You'll get plier handles and three plier heads you change to fit your application: a wire-cutting head, a wire gripping and cutting head, and a long nose with side cutter head. Pliers have a dual-hinge design that increases leverage and delivers twice the gripping power of standard pliers.

Heads are forged steel and cut steel-reinforced wire (ACSR), hardened wire, and nails. Handles are alloy steel with cushion grips and have a spring return. Set has a nylon carrying holster. *Wire gripping and cutting head* and *long nose head* have serrated jaws.

Mini Thin-Head Wire-Cutting Pliers

20° Head

60° Head

When you don't plan on everyday, repetitive use, these pliers are an economical alternative to our other miniature wire-cutting pliers. All have a thin, angled head that allows cutting in confined areas. Pliers make a flush cut and have a spring return.

Steel pliers cut soft wire. ***Type 420 stainless steel*** pliers have good corrosion resistance and cut soft wire and medium hard wire.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with fatigue-reducing handles*** have contoured handles that minimize wrist strain while offering maximum comfort. Pliers are for right-handed use. Pliers ***with ultra-grip handles*** have grips made of both hard and soft materials for a more comfortable grip than cushion grips.

● Has a catch to hold cut wire.

About Wire-Cutting Pliers

Wire-cutting pliers, also known as diagonal-cutting pliers, produce one of three cuts: standard, semiflush, or flush. These styles refer to the amount of "pinch" left on the tip of the wire after it has been cut.

Standard— These pliers produce a deep, pointed, pinched end. Use for electrical and general applications.

Semiflush— The most widely used cut for electronics assembly, these pliers produce a slightly pointed pinched end. They are generally more accurate than standard-cut pliers.

Flush— Pliers produce a cut with virtually no "pinch," creating clean connections for easy soldering. Flush-cut pliers are not as long lasting as standard and semiflush.

Wire-Cutting Pliers

Also known as diagonal-cutting pliers and dike pliers, these tools have cutting edges that are beveled for close cutting and hardened for long-lasting sharpness and durability. Pliers have oval-shaped heads and are made of forged steel unless indicated otherwise.

General Purpose— For cutting soft steel wire and copper wire. The *Type 420 stainless steel* pliers offer good corrosion resistance. *Type 420 stainless steel pliers with plain handles* are also autoclavable for sterile environments.

High Leverage— The joint rivets are closer to the cutting edges to provide more cutting power than general purpose pliers. In addition to cutting soft steel wire and copper wire, pliers can cut most hardened wire.

Ultra High Leverage— Have super-tough cutting edges to cut through steel-reinforced wire (ACSR), hardened wire, and nails (in addition to cutting soft steel wire and copper wire).

Compound Leverage— The jaws and the handles have leverage points to permit easy cutting of soft steel wire and copper wire.

Pliers ***with spring return*** have jaws that automatically open after the cut is made to reduce operator fatigue.

Pliers ***with high-visibility handles*** have neon-colored grips for easy identification; grips are available in green, orange, and red.

Pliers ***with static-dissipative (ESD-safe) handles*** have cushion grips that dissipate electrostatic charges to protect sensitive electronic components.

Pliers ***with insulated handles*** comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1000 volts; they have finger guards to keep your fingers away from the jaws.

Pliers ***with ultra-grip handles*** have grips that are made of hard and soft materials to offer a more comfortable grip than cushion grips.

Plastic-Cutting Pliers

Designed for cutting plastics, these extremely sharp pliers make a flush cut that leaves a smooth, finished edge. Not intended for cutting metal or wire.

Pliers are made of forged steel with a tapered and flat head that's ground flat on the back side for close trimming in confined areas. All have a spring return.

Pliers ***with adjustable stop*** have an adjustment screw to prevent the jaws from closing completely, which prolongs cutter life. Pliers ***with fatigue-reducing handles*** have contoured handles to minimize wrist strain and provide maximum comfort.

Tip-Cutting Pliers

Make semiflush cuts in tight spaces; pliers have sharp cutting edges at the tip of each jaw for precise cutting. Made of polished forged steel with cushion-grip handles and a spring return.

7060A11 has a special cutting edge that is rugged enough to cut soft, medium hard, and hard wire. Edge also cuts nickel ribbon wire. 3714A11 cuts copper wire.

Miniature Wire-Cutting Pliers

For information about wire-cutting pliers and cut styles, see page 2753.

Miniature Wire-Cutting Pliers

Oval Head with Static-Dissipative Cushion-Grip Handles

30° Angled Head

Tapered and Flat Head with Static-Dissipative Fatigue-Reducing Handles

A small head and hardened cutting edges yield good cutting results in most electronics applications. Also known as diagonal-cutting pliers, tools cut soft wire and copper wire. All have a spring return and cushion grips. ***Type 420 stainless steel*** pliers have good corrosion resistance.

Oval head pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces. ***Tapered and flat head*** pliers are ground flat on the back side for close trimming in confined areas. Pliers ***with static-dissipative (ESD-safe) handles*** have grips that dissipate electrostatic charges to protect sensitive electronic components. Pliers ***with fatigue-reducing handles*** have extra-long contoured handles that evenly disperse gripping pressure.

Miniature Precision Wire-Cutting Pliers

Erem Oval Head

45° Angled Head

Lindstrom Tapered Head

You'll find these pliers a cut above the rest. Also known as diagonal-cutting pliers, tools cut soft steel and copper wire. All have a miniature head, precision cutting edges, and an adjustable screw joint that keeps the jaws aligned. Pliers are made of steel with static-dissipative (ESD-safe) handles that dissipate electrostatic charges to protect sensitive electronic components. ***Oval head*** pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces. ***Tapered and flat head*** pliers are ground flat on the back side for close trimming in confined areas.

Erem "Magic" Pliers— Formed by a process that imparts extra strength to the tool. All have an internal "magic" spring that provides constant, uniform tension for superior performance.

Lindstrom Pliers— Have a spring return that automatically opens the jaws to reduce operator fatigue.

Miniature Precision Anti-Glare Wire-Cutting Pliers

Tapered Head

The black chrome finish on these pliers won't cause glare that can interfere with precision work. Made of forged steel, they have hardened cutting edges and a spring return that automatically opens the jaws to reduce operator fatigue. Pliers have ultra-grip handles, which are made of both hard and soft materials to provide a comfortable grip.

Oval head pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces.

Miniature Precision Tungsten Carbide Wire-Cutting Pliers

Oval Head with Ultra-Grip Handles

Tungsten carbide cutting edges are bonded to the jaws for long life and superior cutting of soft, medium, and hard wire. Pliers are made of steel and have a joint that keeps the cutting edges aligned. All have a spring return and static-dissipative (ESD-safe) handles that dissipate electrostatic charges to protect sensitive electronic components.

Pliers ***with ultra-grip handles*** have grips made of both hard and soft materials for a more comfortable grip than cushion grips. ***Oval head*** pliers are the most durable. ***Angled head*** pliers allow cutting from above. ***Tapered head*** pliers provide easy access to confined spaces.

For information about wire-cutting pliers and cut styles, see page 2753.

Air-Powered Wire-Cutting Pliers

Use your shop's air supply to power these cutting pliers. They're great for high-volume cutting and trimming of plastic (Style 1 jaw) and soft wire (Styles 2-5 jaws). Jaws can be mounted in the handle for right- and left-hand use. Pliers require 60 to 100 psi air supply. For bolt and cable cutters, see pages 2342-2345.

Power Handles— Have an aluminum housing and a safety lever with a thumb latch that must be pushed forward to activate the lever. Come with a 5-ft. hose with 1/8″ NPT male connection for power handle and 1/4″ NPT male connection for air supply. *Light duty* handle has an external adjusting screw that controls jaw opening.

Cutting Jaws— Made of steel with a rust-resistant black-oxide finish. Jaws can be sharpened. *Scissor style* is useful for clean cutting of fine wire and nickel ribbon.

Also Available: Repl. parts. Please ask for 56145A21 and specify part name.

For information about wire-cutting pliers and cut styles, see page 2753.

Extra-Reach Long-Nose Pliers

Perfect when you need to extend your reach, the handles on these pliers are longer than those on most long-nose and flat-nose pliers. Made of forged steel with cushion-grip handles. Jaws are serrated.

Double Joint— Pliers have two joints, allowing the jaws to fully open with minimal handle movement. Useful for reaching into narrow areas.

	O'all Lg.	Jaw Lg.	Tip Thick. (A)		Each
Single Joint	11″	2 51/64″	7/64″	5777A22	$24.26
Double Joint	13″	3″	9/64″	5777A16	29.02

Long-Nose Locking Pliers

Get pistol-grip locking pliers and long-nose pliers in one tool. Just turn the pressure adjusting screw in the handle to lock the jaws around your workpiece. Pliers will stay clamped, leaving your hands free. A long nose on the jaws is ideal for use in confined spaces. Jaws are serrated and made of forged steel with a nickel-plated finish.

O'all Lg.	Jaw Lg.	Tip Thick. (A)		Each
8 5/8″	2 1/2″	5/16″	6261A11	$50.56

Flat-Nose Pliers

Although similar to long-nose pliers, these tools have a flat jaw head and wider tips. Also known as duckbill pliers, they're useful for reaching into confined spaces.

With Cushion-Grip Handles— Jaws are serrated. 5567A12 can cut soft and medium hard wire up to 10 AWG (0.102″ Dia.).

With Static-Dissipative (ESD-Safe) Cushion-Grip Handles— Have grips that dissipate electrostatic charges to protect sensitive electronic components. They have smooth jaws and a spring return. Type 420 stainless steel pliers have good corrosion resistance.

With Insulated Cushion-Grip Handles— Meet IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. Jaws are serrated.

Bent-Nose Pliers

Reach over and between closely spaced components or twist and loop fine wire. Jaws are serrated, unless noted. ***400 series stainless steel*** pliers have good corrosion resistance.

Style 1— 5632A16 has a wire cutter for cutting medium and hard wire up to 16 AWG (0.051″ Dia.).

Style 2— Pliers have static-dissipative (ESD-safe) handles with grips that dissipate electrostatic charges to protect sensitive electronic components. A spring return automatically opens the jaws.

Style 3— Handles are insulated to comply with IEC 60900 and ASTM F1505-01 standards and are tested to 1,000 volts. Pliers are chrome plated with hardened cutting edges to cut soft and hard wire.

●Smooth jaws.

Stainless Steel Hemostat Pliers

Use hemostat pliers for intricate work in tight spaces. All have a ratchet lock in the handle that allows you to vary the gripping pressure. Jaws are serrated and hold firmly without cutting. Made of 400 series stainless steel for good corrosion resistance.

Bent jaws have a 20° to 30° jaw bend, unless noted.

♣ Has a 45° jaw bend.

For information about wire-cutting pliers and cut styles, see page 2753.

Wire-Twisting Pliers

Manual Return

Also known as lock wire pliers, tools twist and cut Type 302/304 stainless steel safety wire (sold separately, see series 8860K on page 3731). Pliers are made of forged alloy steel with a black-oxide finish. Jaws are serrated.

Note: If the plier body cannot turn freely, the wire will not twist.

Manual Return— You push the knob back into the housing.

Automatic Return— Simply release the knob and a spring automatically retracts it. *Tapered nose* pliers get into narrower spaces. Pliers *with wire catch* hold cut wire.

Sets— Packed in a plastic case. Wire meets ASTM A580 and MS 20995C. For extra wire, see series 8860K on page 3731.

5-Piece Set— Includes 5296A62 automatic-return pliers above, long-reach wire-twisting pliers (shown on this page), and three ¼-lb. spools of Type 304 stainless steel safety wire in sizes 0.020″, 0.032″, and 0.041″.

5296A55 ..... **Per Set** $163.56

6-Piece Set— Includes 5296A61 and 5296A25 automatic-return pliers above, long-reach wire-twisting pliers (shown on this page), and three ¼-lb. spools of Type 304 stainless steel safety wire in sizes 0.020″, 0.032″, and 0.041″.

5296A58 ..... **Per Set** $253.24

Hose Pinch-Off Pliers

Once you clamp these pliers onto a hose, their automatic locking ratchet holds the jaws in place, allowing you to squeeze shut nonwire-reinforced hose.

Jaws swivel for parallel clamping and positive shutoff. Pliers virtually eliminate the need for draining the hose when installing thermostats and pumps on pressurized cooling systems. Ideal for radiator and heater hoses and water, air, vacuum, and fuel lines. Pliers are steel and have cushion-grip handles.

O'all Lg.	Jaw Lg.	OD Capacity		Each
5½″	1⅜″	¾″	5774A21	$12.82
9¾″	2½″	1½″	5774A14	25.28
14″	4⅜″	2½″	5774A22	31.00

Fence Pliers

The plier head has a serrated hammer for driving staples on one side, a point for pulling staples on the other, and a ¾″ deep staple grip on top. Plus, there is a wire cutter on each side for double-stranded barbed wire and a wire stretcher between the handles. Made of forged steel with cushion-grip handles.

O'all Lg.	Head Lg.	Max. Wire Size, AWG (Dia.)		Each
10 5/16″	3 3/16″	11 (0.090″)	5636A4	$18.89

Long-Reach Wire-Twisting Pliers

Shown with Wire, Not Included

Twist wire in narrow, hard-to-reach areas. Pliers have a slim design and come with an extension for extra length. Use with Type 302/304 stainless steel safety wire (sold separately, see 8860K series on page 3731). First, thread wire through the plier tip to the outside of the shaft. Then, thread the wire through the eyelets and bend the wire ends over to keep the wire in place. Finally, pull out the knob to twist the wire. Tool rotates clockwise. Shaft is made of chrome-plated steel.

O'all Lg.	Tip Dia.	Max. Wire Cap.		Each
13″ or 19″	¼″	0.057″	5726A9	$51.98

Stainless Steel Precision Micro-Pliers

Easily work in the smallest of spaces, such as under a microscope. Pliers are made of 400 series stainless steel for good corrosion resistance. All can be autoclaved up to 600° F. Handles are designed to act as a spring return.

		O'all Lg.	Jaw Lg.		Each
1	Round Nose	3″	15/32″	5261A12	$30.53

55° Bent Nose	4¾″	1″	5486A7	34.92

Breakaway Collar Removal Pliers

Remove breakable round collars on 5/32″ to 5/16″ Hi-Lok, Hi-Lite, Hi-Tigue, Veri-Lite, and C-Lok style fasteners—even those with rounded and stripped collars. Also called Hi-Lok pliers, these get under collars to break them without cutting or damaging the fastener and surrounding material. Pliers work on collars/fasteners that have press-fit installation (hole is slightly smaller than fastener body) and clearance-fit installation (hole is slightly larger than fastener body). For collars/fasteners with clearance-fit installation, use a T-handle hex key (sold separately, see pages 2841-2842) to keep the fastener from turning.

Head is offset 20° and jaws are notched for maximum gripping power. Made of forged steel with a black-oxide finish and cushion-grip handles.

O'all Lg.	Jaw Thick.	Jaw Tip Width		Each
7½″	9/32″	⅞″	1061A1	$33.76

Long-Reach Clamping Pliers

Similar to using a clamp, you squeeze the handles to open the jaws. When you release the handles, a spring snaps the jaws closed to hold your workpiece. Made of steel, pliers have long, serrated jaws and a 35° bend at the jaw tips for reaching into and around tight spaces. Handles have cushion grips.

O'all Lg.	Max. Jaw Opening	Jaw Lg.	Tip Thick. (A)		Each
9¼″	1¼″	3″	¼″	5295A41	$33.30

Heavy Duty Fixed-Tip Retaining-Ring Pliers

Internal with Straight Tips

External with 90° Tips

One-piece forged construction from the tips to the handles delivers super strength and long life. Made of hardened and tempered alloy steel. Handles have cushion grips. ***Internal pliers*** are for installing and removing rings inside a bore. ***External pliers*** are for installing and removing rings around a shaft. Pliers have a spring return.

19-Piece Set— Includes Styles E, F, and H pliers; one pair of each tip size listed for each style; and hex keys for changing tips. Packed in a plastic case.

5391A91 ..... **Per Set** $110.60

Twist-Grip Replaceable-Tip Retaining-Ring Pliers Set

Give the handle a turn to open and close the jaws while you install and remove internal and external retaining rings. Use with rings that have bore diameters (for rings in a bore) from 2 7/16″ to 3 1/2″ (62 to 89 mm) and shaft diameters (for rings on a shaft) from 1 1/2″ to 4″ (38 to 102 mm). Made of stamped steel.

Set includes pliers, an extra pair of jaw plates and screws, and one pair each of 15° and 45° angle tips in 0.108″ dia. and 45° angle tips in 0.123″ dia. Pliers require a 3/32″ hex key (not included) to change tips. Overall length is 10″.

5538A11 ..... **Per Set** $48.12

Replacement Tip Set— Includes one pair each of 15° and 45° angle tips in 0.108″ dia. and 45° angle tips in 0.123″ dia., plus replacement jaw plates and screws. Packed in a plastic box.

5538A12 ..... **Per Set** $10.15

Replaceable-Tip Large-Diameter Retaining-Ring Pliers

A ratchet mechanism makes it easy to handle large rings. Compress and expand rings gradually, then lock in at the desired size without the need to keep pressure on the handles. Pliers are made of stamped, heat-treated steel and include a pair of straight steel tips. Require a #2 slotted screwdriver (not included) to change tips, except for 5300A27, which requires a 5/32″ hex key (not included). ***Internal pliers*** are for installing and removing rings inside a bore. ***External pliers*** are for installing and removing rings around a shaft.

Also Available: Extra tips. Please ask for 7131A1 for pliers with cushion-grip handles, 5300A3 for plain-handle pliers, and specify tip diameter and angle (straight, 15°, 45°, or 90°).

Note: 15° angle tips not available for pliers with plain handles.

7131A13 ..... **Per Set** $122.13

7-Piece Plain-Handle Set— Includes internal pliers 5300A21 and external pliers 5300A33, both with 0.120″ dia. straight tips. Plus, one pair each of straight, 45°, and 90° angle tips in 0.120″ dia.

5300A61 ..... **Per Set** $198.62

Large-Diameter T-Handle Replaceable-Tip Retaining-Ring Tool Set

Install and remove large-diameter retaining rings easily and securely. The sliding T-handle and compound screw multiplies the force you exert and keeps internal rings contracted and external rings expanded to hold the rings in place. Tool is made of heat-treated steel and comes with one pair each of 20° angle and 90° angle tips in 0.120″, 0.150″, and 0.180″ dia. and a hex key for changing tips. Overall length is 7″. Packed in a plastic case.

Repl. Tip Sets— Include one pair each of 0.120″, 0.150″, and 0.180″ dia. tips.

Stainless Steel Locking Pliers

Made of Type 304 stainless steel to resist corrosion, pliers can be sterilized. All have a trigger-release lever handle and a pressure-adjusting screw to create a firm grip. Jaws are serrated.

Jaw Type	O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
Curved	7″	17/16″	1″	54645A24	$55.00
Straight	9″	1 3/4″	1 3/8″	54645A31	59.78

Storage Holder for Locking Pliers

Create convenient storage for up to three locking pliers (not included). Great for mounting to a table or bench top, holder has a thumb screw and a swivel pad that act like a C-clamp to firmly grip any surface up to 2″ thick. Made of steel with a corrosion-resistant enamel finish. Holder is 4 15/16″ Ht. × 2 1/2″ Wd.

Fits Pliers Lg.		Each
4″-5″, 6″-7″, 8″-12″	4978A22	$15.36

E- and C-Style External Retaining-Ring Tool

A spring on one end of the tool holds a ring in position for installation, and a hook on the other end is for removal. Use with external E- and C-style rings with an ID of 0.156″ to 3″ and a thickness of 0.025″ to 0.093″. Made of steel. Overall size is 6 3/4″ Lg. × 9/32″ Wd. × 1/16″ Thick.

5728A2 ..... Each $19.44

External Lock-Ring Pliers

Use pliers with 3/4″ to 1 3/4″ diameter external flat and pointed-tip lock rings (also known as Eaton-style snap rings). Pliers are made of heat-treated steel and have cushion-grip handles with spring return. Jaw tips are offset and finely scored on the outside to prevent slipping. O'all length is 8 1/2″.

5773A14 ..... Each $20.03

Parallel-Action Pliers

Standard with Wire Cutter

Jaws remain parallel.

Long Nose without Wire Cutter

Jaws remain parallel for a stronger grip—this keeps irregularly shaped objects from slipping forward when pressure is applied. All pliers have serrated steel jaws.

Standard— Pliers have plain handles made of nickel-plated steel. All have a V-shaped slot in the lower jaw that allows you to lead wire and pins down the throat of the pliers. Close the pliers to hold the wire or pin firmly in place during pulling operations.

Long Nose— Pliers have a compact profile, so they can get into tight spaces. Made of steel with cushion-grip handles.

O'all Lg.	Max. Jaw Opening	Jaw Lg.	Max. Wire Size, AWG (Dia.)		Each
Standard without Wire Cutter					
5″	3/8″	1 3/8″	———	5654A1	$32.02

● Jaws open to 3″ when they are not parallel.

Self-Adjusting Locking Pliers

Switch between parallel-jaw self-adjusting pliers and locking pliers with a push of a lever. Use the pressure-adjusting screw to create a firm grip. When pliers are in self-adjusting mode, squeeze the handles and the jaws automatically adjust around your work. Pliers have serrated V-jaws and a mechanism that multiplies hand force for more gripping power. Made of steel with black-oxide finish. Handles have molded grips.

O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
6″	1 1/8″	2″	5113A1	$12.50
8″	1 1/8″	2″	5113A27	26.30

Swivel-Jaw Locking Pliers

The swivel action of the jaw pads provides a secure hold on many shapes. Made of steel with knurled pads and a trigger-release lever handle. Use the pressure-adjusting screw to create a firm grip.

O'all Lg.	Max. Jaw Opening	Jaw Lg.		Each
9 1/4″	1 3/4″	1 1/2″	5114A51	$31.16
11 3/4″	3 15/16″	3 1/2″	5114A52	35.82

Vise-Grip Locking Pliers

Curved Jaws with Wire Cutter (Trigger-Release Handles)

Long Nose Jaws (Easy-Release Handles)

Hex Jaws

Straight Jaws

Pinch-Off Jaws (Nonserrated)

Turn the pressure-adjusting screw in the handle to lock the jaws in a vise-like grip around your workpiece. Pliers stay clamped on your work, leaving your hands free. Pliers are made of nickel-plated alloy steel. Jaws are serrated, unless noted.

Trigger-Release Handles— To open pliers, press the release trigger on the lower handle.

Easy-Release Handles— You can pull handles open with one hand; handles open twice as easily as trigger-release handles.

Pliers with wire cutter cut up to 3⁄64″. One bite will cut thinner wires; progressive bites will cut thicker wires.

Pliers with hex jaws lock on three sides of a hex fastener without damaging or slipping off the fastener.

Pliers with pinch-off jaws are for pinching off tubing as well as water and gas lines in general repair work.

Individual Pliers

● Jaw capacity represents hex fastener size. ▲ Jaws are smooth (nonserrated).

Trigger-Release Sets

3-Pc. Set— Includes one each of 5″ curved jaw without wire cutter, 10″ curved jaw with wire cutter, and 6 1⁄2″ long nose with wire cutter. Packed in a pouch.

5369A46 ..... **Per Set** $28.74

3-Pc. Set— Includes one each of 10″ curved jaw with wire cutter, 6 1⁄2″ long nose with wire cutter, and 7″ straight jaw without wire cutter.

5172A42 ..... **Per Set** $24.92

4-Pc. Set— Includes one each of 10″ curved jaw with wire cutter, 6 1⁄2″ long nose with wire cutter, and 7″ and 10″ straight jaw without wire cutter. Packed in a pouch.

5369A47 ..... **Per Set** $40.67

Easy-Release Set

4-Pc. Set— Includes one each of 7″ and 10″ straight jaw and 7″ and 10″ curved jaw; all are without a wire cutter. Packed in a box.

5172A54 ..... **Per Set** $45.36

Adjustable Wrenches

Adjustability makes these wrenches a popular choice—they fit workpieces in many shapes and sizes.

Wrenches and Wrench Sets

Made of forged alloy steel. ***Auto Locking—*** Apply pressure on the wrench and the knurls lock automatically to prevent the jaws from loosening and slipping off your workpiece.

5385A33 ..... **Per Set** $83.79

Standard and Auto Locking with Plain Handle

Standard with Cushion-Grip Handle

Ultra-Grip Handle with Measuring Scale

Insulated Handle with Measuring Scale

Wrenches with Measuring Scale

A scale on the head of the wrench lets you accurately size flat plate metal, nuts, and tubing. All are made of forged alloy steel.

Ultra-Grip Handle— A hard plastic grip is covered with a soft rubber coating for maximum hold.

Insulated Handle— Wrenches have a cushion grip that is tested to 1,000 volts. Meet IEC 60900, ASTM F1505-01, and OSHA requirements.

Tight-Access Adjustable Wrench

A tapered, thin-profile nose and longer-than-average flat jaws reach into narrow spaces. Wrench has a short handle for easy positioning. Made of forged alloy steel with a corrosion resistant finish and a thermoplastic grip. A measuring scale is etched into the head.

O'all Lg.	Jaw Cap.		Each
8″	1½″	91821A200	$27.52

Lever-Locking Adjustable Wrench

Get an adjustable wrench and lockable pliers in one tool. Press a lever and the jaws lock onto your fastener, leaving your hands free. Made of forged steel with a chrome finish.

O'all Lg.	Jaw Cap.		Each
10″	1 9/64″	6556A8	$18.97

Adjustable Wrench with Hammer Head

Not your ordinary adjustable wrench, this tool has a raised striking surface that functions as a hammer head. The other end has a 12-pt. box end. Often used in the mining industry, wrench is made of forged alloy steel with a chrome finish.

O'all Lg.	Jaw Cap.	Box End Size		Each
12″	1¾″	⅞″	91822A100	$46.08

Ratchet-Action Adjustable Wrenches

You can reposition these wrenches without removing them from your workpiece—they are similar in function to a ratcheting wrench. Great for loosening and tightening fasteners quickly. Made of forged steel with a chrome finish.

O'all Lg.	Jaw Cap.		Each
8″	¼″ - 15/16″	53495A31	$15.61
10″	5/16″-1 3/16″	53495A33	18.35
12″	⅜″ -1⅜″	53495A34	23.86

Wide-Opening Pipe Wrenches

You might know these adjustable tools as monkey wrenches. The jaws open wide to fit around your workpiece. Made of forged alloy steel with a chrome finish. Jaws are smooth and nonmarring.

O'all Lg.	Jaw Cap.		Each
9″	2¾″	5382A1	$29.52
11″	3″	5382A2	34.90
15″	3⅝″	5382A3	55.49
18″	4⅜″	5382A4	77.49

Pipe and Valve Wheel Wrench

Also known as an engineers' pipe wrench, this tool combines a pipe wrench with a valve wheel wrench. The pipe wrench end is for gripping pipe, test plugs, packing glands, and flange nuts. Use the valve wheel end for loosening valve wheels. Made of ductile steel with forged alloy steel jaws. Jaws are serrated.

O'all Lg.	Pipe Wrench Jaw Capacity	Valve Wheel Wrench Opening		Each
10″	1″	⅝″	51425A25	$92.10

Stainless Steel Adjustable Wrenches

Made of Type 420 stainless steel, these wrenches are great for corrosive environments. ***Plain handle*** wrenches can be autoclaved up to 1832° F.

O'all Lg.	Jaw Cap.	Plain Handle	Each	Cushion Grip Handle	Each
6″	45/64″	7375A37	$33.73	7375A28	$37.39

12″	1⅜″	5195A28	46.56	5195A48	40.75

Hinged Pipe-Wrenching Collars

Loosen and tighten pipe without marring or gouging it—you don't even need access to the end of the pipe. Collars have a one-piece hinged design with wrench flats. Just fasten a collar onto your pipe, grip the flats with a wrench (not included), and rotate the pipe.

Collars have a captive screw to secure them, so there are no parts to drop or lose. Screw requires a hex key (not included) to tighten. Collars and screws are made of steel with a black finish.

Pipe Size	Collar OD	Collar Wd.	Distance Across Flats	Screw Size	Hex Size		Each

1½″	3¼″	⅝″	2 13/16″	5/16″-24	¼″	91823A150	27.40

Internal Pipe and Nipple Wrenches

Insert wrenches into pipe or a fitting and turn—eccentric action engages the wrench against the walls of the pipe or fitting for easy installation and removal without thread damage. Made of steel.

Style A has a sliding T-handle to turn wrench. ***Style B*** turns with an adjustable wrench or pipe wrench (not included).

	Pipe Size	Fits ID Size	O'all Lg.	Hex Size		Each

4-Piece Set—Includes one each of 5371A13, 5371A14, 5371A15, and 5371A16. Packed in a vinyl pouch.
5371A24 ..... **Per Set** $28.79

Nonmarring Round-Grip Wrenches

Jaws and Handle Sold Separately

Smooth (nonserrated) jaws grip most surfaces, even highly polished cylindrical objects, without marring. Just push down on the wrench and pull the handle toward you; the jaws encircle pipe, tubing, and other cylindrical objects. Use for pipe coils and pipe railings where work space is limited. Made of forged steel. Handles have a red painted finish. Jaws and handles are sold separately. *Note:* Jaws are not interchangeable with other handles.

To Order: For jaws, please specify size from those listed. A separate jaw is needed for each pipe diameter. ***Jaw and handle sets*** include a handle and one of each jaw size listed.

Jaw Sizes For Outside Diameter (OD)	Jaws Wd.		Each	Handles Lg.		Each	Jaw and Handle Sets	Per Set

Ridgid Heavy Duty Pipe Wrenches

Count on these premium wrenches for jam-free operation. All have I-beam shaped handles for strength. Hook jaws are forged steel with hardened alloy steel teeth. Heel jaws are hardened alloy steel. Meet Fed. Spec. GGG-W-651e, unless noted.

Cast Iron Wrenches— Have a cast iron handle.

Aluminum Wrenches— Have an aluminum handle. Tools are as durable as iron wrenches of the same size, but lighter in weight.

Standard jaws are serrated; they're well-suited for gripping pipe and conduit. Hook jaw is full floating with spring suspension. ***Hex jaws*** are smooth and provide a multisided grip on hex nuts, square nuts, valve packing nuts, and unions that join pipe and drain lines. Not for use on pipe.

Straight style wrenches are ideal for loosening and tightening pipe fittings and rigid conduit. ***End style*** wrenches work like straight style, but have an angled head for work in tight spaces. ***Offset style*** wrenches are similar to end style, but are especially effective for overhead work.

Note: Straight style and end style wrenches have the same replacement parts.

■ Does not meet Fed. Spec. GGG-W-651e.

Self-Adjusting Pipe Wrenches

The top jaw is hinged, allowing these pipe wrenches to automatically clamp down on pipe and nuts—no adjustment screws necessary. Jaws are serrated and made of hardened alloy steel.

Standard— Jaws are spring loaded to clamp down for a snug fit. Great for working in limited-space areas.

Ratcheting— Tools ratchet without being removed from your workpiece. The head rotates 360° for full leverage in hard-to-reach places.

Quick-Adjust Pipe Wrench

Simply press the lever to slide the movable jaw to the desired position—tension keeps it in place. The head is only ½″ thick, making this wrench ideal for work in confined spaces. Handle is aluminum. Body and jaws are steel.

O'all Lg.	Jaw Cap.		Each
11″	2¼″	7023A41	$30.23

Strap Wrenches

When traditional wrenches aren't right for your job, use a strap wrench to grip almost any shape object without marring. For use on plastic pipe, tubing, hand wheels, and items with highly polished surfaces. Straps resist oils and solvents. Polyester is more durable and retains its shape better than synthetic rubber.

Styles A&B— Have a cast iron handle. Style A has a polyester strap. Style B has a latex-coated polyester strap. ***Style C—*** Has an aluminum handle and synthetic rubber strap. ***Style D—*** Have a polypropylene handle and synthetic rubber strap. ***Style E—*** Have a cast iron handle, latex-coated polyester strap, and forged shackle to hold strap closed for extra turning force. Shackle allows you to quickly adjust strap and reposition the wrench.

♣ Replacement straps do not fit Ridgid brand strap wrenches. ★ Meet Fed. Spec. GGG-W-651e.

Square-Drive Strap Wrenches

Pair these wrenches with your square-drive ratchet wrench to create more leverage and torque than you can achieve with standard strap wrenches of the same size.

3/8″ Square Drive— This miniature wrench is just the right size for small parts and fittings. It has a cast aluminum handle with a 3/8″ square-drive hole for use with a ratchet or torque wrench. Strap is made of neoprene-impregnated fabric to protect against marring.

1/2″ Square Drive— Great for larger parts and oil filters. Just apply pressure with your 1/2″ square-drive ratchet or 3/4″ open-end wrench. Handle is zinc-plated steel. Strap is nylon and is not replaceable.

Chain Wrenches

Simply wrap chain around square, round, hexagonal, and even irregular shapes for easy turning. Chain is steel. ***Vise-Grip Style—*** Wrench has a more powerful grip than standard wrenches. Just turn the adjustment screw and squeeze the handle. Press release lever on handle to instantly unlock the wrench. Made of nickel-plated alloy steel. Add as many 18″ lengths of ***extension chain*** as you need to your wrench. ***Standard—*** Wrenches have ratchet-action that allows you to reposition the wrench without removing it from your workpiece. Made of steel with a forged head.

Reversible-Jaw Chain Wrenches

When the teeth on the chain become burred and dull, simply reverse the jaws end for end—and virtually double the service life of these wrenches. Wrap chain around square, round, hexagonal, and irregular shapes for easy turning. Jaws and chain are steel. Meet Fed. Spec. GGG-W-651e, unless noted.

Standard— Also known as chain tongs. Wrenches have a forged alloy steel handle.

Ratcheting— Wrenches ratchet in either direction without being removed from the workpiece. Handle is made of ductile iron.

About Spanner Wrenches

There are two styles of spanner wrenches, pin style and hook style. Both styles are offered in fixed and adjustable versions. ***Fixed*** wrenches fit a single circle diameter. ***Adjustable*** wrenches fit a range of circle diameters—a good choice when you are unsure of the exact diameter you're working with.

Pin style spanner wrenches fit into round holes. Holes can be located on the ***side*** (circumference) of rings, locknuts, and collars or on the ***face*** of flanges and collars.

Pin Style — *Holes on the Side* — *Holes on the Face*

Hook style spanner wrenches fit into slots. Slots are located on the ***side*** (circumference) of rings, locknuts, and collars.

Hook Style — *Slots on the Side*

Spanner Wrenches

Adjust collars, locknuts, rings, packing glands, adjustable rollers, power transmission bearings, as well as material handling and machine tool equipment. All are forged steel with a black finish, except *Style F*, which also come in Type 304 stainless steel. ***Type 304 stainless steel*** wrenches are corrosion resistant and can be autoclaved up to 600° F.

4-Piece Steel Set—Includes one each of 5471A11, 5471A12, 5471A13, and 5471A14 above.
5471A21 ..... **Per Set** $109.41

5-Piece Type 304 Stainless Steel Set—Includes one of each stainless steel wrench above.
6724A21 ..... **Per Set** $498.57

For information about spanner wrenches, see page 2765.

Long-Reach Adjustable Hook Spanner Wrench

With a 24″ long handle and two interchangeable heads, this spanner wrench has an extra-long reach and a wide capacity range. Each head has an overall size of 12″ Lg. × 4¾″ Ht. with 11 positioning holes to fit fasteners from 4¾″ to 12¾″ dia. One head has a ½″ Dp. × ⅜″ Thick. hook for thin adjusting nuts; the other has a ½″ Dp. × ¾″ Thick. hook for heavy turret nuts. Made of forged alloy steel with a chrome finish.

5479A11 ..... **Each** $264.00

Adjustable-Arm Multi-Pin Spanner Wrench Sets

Use the wrenches in these sets for internal and external retaining rings, bushings, and collets.

Set for 1/8″ to 4 5/8″ Circle Diameters

Use for ⅛″ to 4⅝″ circle diameters. Turn the thumb screw to adjust this wrench. A spring-loaded retainer holds the tips. Made of steel with five pairs of nickel-plated tips: straight, ⅛″ offset, ¼″ offset, ⅜″ offset, and 1/32″ dia. round point.

5754A5 ..... **Per Set** $84.95

Straight *⅛″ Offset* *¼″ Offset*

⅜″ Offset *1/32″ Dia. Round Point*

Replacement Tips		Per Pair
⅛″ Wd. × 0.025″ Thick.		
Straight	**5754A11**	$10.59
⅛″ Offset	**5754A12**	10.59
¼″ Offset	**5754A13**	10.59
⅜″ Offset	**5754A14**	10.59
1/32″ Dia. Round Pt.	**5754A15**	10.59

Set for 1/2″ to 7″ Circle Diameters

Wrench Set

Use for ½″ to 7″ circle diameters. Set includes 3½″ and 7″ hex steel bars, two 3¼″ aluminum arms, and three pairs of tips: 3/16″ Wd. × 1/32″ Thick., 3/16″ Wd. × 1/16″ Thick., and 1/16″ dia. round point. Each arm has a locking thumb screw for adjustments (arms with tips inserted adjust 2″, 2¾″, and 3½″ below the knob). All tips lock securely into arms with set screws.

Replacement tip set includes the three pairs of tips listed above.

		Per Set
Wrench Set	**5770A1**	$114.62
Replacement Tip Set	**5770A2**	33.26

Water Filter Spanner Wrenches

Easily loosen water filter housings when it's time to replace a cartridge. Wrenches are made of plastic and have contact points to turn the housing. Color is black. To estimate the diameter of your housing, measure its circumference with a flexible tape rule and then divide by 3.14.

Note: Wrenches are not for tightening.

ID	No. of Contact Points	O'all Lg.		Each
3¾″	6	11½″	**91824A100**	$3.00
4¼″	4	12″	**91824A200**	3.00
5¾″	6	13″	**91824A300**	3.14

Aluminum Hook Spanner Wrenches

Loosen and tighten rocker-lug and pin-lug fire hose couplings and adapters from ¾″ to 6″ dia. Wrenches also have a 1 13/16″ Lg. × 7/16″ Ht. slot for gas valve shut-off.

Style A has a 1½″ wide pry tip on the end of the handle.

	O'all Lg.	Head Thick.		Each
A	10½″	¾″	**4898K21**	$26.67
B	10″	¾″	**4898K23**	34.88

Thin-Profile Adjustable Pin Spanner Wrench

You'll find this wrench slim enough to fit flanges and pad nuts on the backing pads of portable sanders and grinders. Made of ⅛″ thick steel with a black finish.

For Circle Dia.	Pin Dia.	Pin Lg.	O'all Lg.		Each
¾″ to 3⅝″	9/64″	¼″	7″	**5794A16**	$7.38

Adjustable Double-Sided Pin Spanner Wrench

One side of this wrench has ¼″ Dia. × 11/32″ Lg. pins; turn it over and it has 5/16″ Dia. × 11/32″ Lg. pins. Use to adjust collars, locknuts, and bearings on machine equipment. Made of corrosion-resistant bronze with Type 303 stainless steel pins.

For Circle Dia.	O'all Lg.		Each
½″ to 7″	7¾″	**5643A47**	$25.33

Square-Drive Adjustable Pin Spanner Wrenches

Just attach your square-drive tool—wrenches adjust to fit many sizes of collars, locknuts, rings, and packing glands. Made of alloy steel with a black finish.

	For Circle Dia.	Pin Sizes, Dia. × Lg.■		Each
½″ Sq. Drive	1″ to 3¾″	7/32″ × 3/16″, ¼″ × 3/16″	**69745A52**	$22.72
¾″ Sq. Drive	2″ to 6″	5/16″ × 3/16″, ¼″ × ¼″	**69745A51**	122.47

■ Pins are reversible to fit both diameters listed.

Adjustable Multi-Pin Spanner Wrench Sets

Each set includes a wrench and four pairs of interchangeable pins for various diameters. Wrenches are made of forged alloy steel with a chrome finish. Length is 9⅝″. All can be used for circle diameters of 25/32″ to 3 15/16″ (20 to 100 mm).

Metric Round Pin Set with Reversible Pins

Pin Dia.	Pin Lg.	Pin Dia.	Pin Lg.
2.5 mm, 4 mm	15/64″, 5/16″	6 mm, 8 mm	25/64″, 25/64″

5490A31 ..... **Per Set** $117.06

Hydrant Wrenches

Single Spanner Head

Single Ratcheting Head

Put these adjustable wrenches to work on hydrants.

Spanner head wrenches fit rocker-lug and pin-lug fire hose couplings and adapters from ¾″ to 6″ dia. The head is ductile iron and the handle is steel with chrome finish and a knurled grip. *Single spanner head* wrench also fits square nuts up to 1¼″ and five-sided nuts up to 1¾″. *Double spanner head* wrench also fits square nuts up to 1½″ and five-sided nuts up to 1⅞″.

Single ratcheting head wrench fits five-sided nuts up to 1½″ dia. Head and handle are made of cast iron.

	O'all Lg.		Each
Single Spanner Head	18½″	**6537T35**	$47.66
Double Spanner Head	19½″	**6537T1**	63.59
Single Ratcheting Head	16⅛″	**6537T3**	254.31

Drum-Plug Wrenches and Square-Drive Socket

Also known as bung wrenches, these tools remove standard screw-in 3/4″ and 2″ drum plugs in the styles listed.

Wrenches are for use with steel and plastic drum plugs. *Style D* is nonmagnetic and FM approved. Meets OSHA requirements.

1/2″ square-drive socket requires a hand or impact wrench for operation. Use to remove plugs. Size is 1 15/16″ Dia. × 2 3/4″ Lg.

Valve and Meter Nut Wrenches

For Water Assembly and Shut-off

Wrench has a V-shaped jaw that is flat on one side and serrated on the other. The head is alloy steel with a black finish; the handle is Type 304 stainless steel with a cushion grip. Head is 5/8″ thick. Overall length is 21″.

For Water Shut-Off Valve and Meter Nuts		Each
3/4″ to 2″	**5040A17**	$99.74

For Water and Gas Shut-Off

Wrench is made of high-strength, spark-resistant cast aluminum with a red powder-coated finish. Head is 1/2″ thick. Overall length is 11 3/8″.

For Water Shut-Off Valve and Meter Nuts (Open End)	For Gas Shut-Off Valve and Meter Nuts (Inside Slot)		Each
Up to 5/8″	Up to 1/2″ × 1 1/2″	**51435A21**	$12.25

Adjustable Slip-Nut Wrench

Slip this wrench into tight spaces to loosen slip nuts, jam nuts, hex nuts, and spuds. Jaws lock in place with a wing nut and have a cutout for easy locknut installation. Made of ductile iron with a rust-resistant zinc-plated finish.

O'all Lg.	Jaw Cap.	Max. Wd.		Each
10 1/4″	1″-3″	4 1/2″	**5423A12**	$14.32

Drum-Plug Torque Wrenches

When you feel the wrench "break," you'll know you've applied the correct pressure to your 3/4″ or 2″ drum plug. Wrenches have a low ft.-lbs. setting for 3/4″ plugs and a higher ft.-lbs. setting for 2″ plugs. Torque is nonadjustable within each setting.

Made of steel with a cushion grip. Overall length is 14″.

Torque, ft.-lbs. Low Setting	High Setting	For Drum Plug Material	Fits Style No.■		Each
For Drum Plugs with Rubber Gaskets					
7-15	17-26	Plastic	3, 4, 9, 10	**6102A13**	$361.16

13-21	27-36	Steel	4, 12	**6102A14**	361.16
For Drum Plugs with Plastic Gaskets					
18-26	38-46	Steel	4, 12	**6102A15**	361.16

■ See Drum-Plug Wrenches and Square-Drive Socket on this page for drum-plug style illustrations.

Valve Wheel Wrenches

Get the extra leverage you need to turn hand wheels on large valves. Wrenches have a specially shaped opening to minimize slipping, so they're great for overhead work and jobs in crowded spaces.

Forged Steel—Withstands heavy use.

Cast Bronze and ***Manganese Bronze***—Reduce spark hazards.

Aluminum and ***Aluminum Magnesium***—Tools are light in weight and reduce spark hazards.

Self-Adjusting Open-End Wrenches

Get a grip on a variety of nut, bolt, pipe, and tube sizes. Just squeeze the handles and four serrated gripping surfaces adjust to fit your object. The gripping surfaces distribute force along the flats of fasteners, not just the pointed edges, to prevent slipping and stripping. Made of nickel-plated steel with textured, cushion-grip handles.

Size Range	O'all Lg.		Each
1/4″- 9/16″ (7 mm-14 mm)	6″	**5139A1**	$23.71

Open-End Striking Wrenches

When stubborn nuts and bolts need a little "persuasion," these heavy duty brutes get the job done. Just place one of the wrenches, also known as a slugging wrench, on a fastener and strike the wrench handle with a hammer or mallet. Made of forged steel. Open end is angled 15°.

Tight-Access Open-End Wrenches

A thin head angled 30° and a short handle allow wrenches to fit into areas with limited clearance. Also known as pump wrenches and service wrenches, all are made of forged steel. Choose a satin (dull) chrome finish with polished (mirror-like) heads or a black finish.

11-Piece Wrench Sets—Packed in a vinyl roll-up pouch.
